One objection which will be advanced immediately to this program is the fact that it will bring Government money into competition with private capital. This difficulty must be met fairly and honestly, and a satisfactory solution found. In the first place, there were only a few vessels engaged in foreign trade, in the hands of American private owners at the beginning of the war. A large number of vessels have been purchased by private owners during the war, and while it is true that most of these have been acquired because of large war profits, and taken over with a full knowledge that the Shipping Board was in existence and a program of Government construction under way, their interests are entitled to full recognition and protection. It is fair to note that war profits, in many cases, have more than repaid the initial investment, and it is also true that a program of Government ownership will not appreciably lessen the value of ships already privately owned and operated under the American flag. The value of ocean tonnage in the world's market will always remain, for a Government owned fleet in the United States will form but a modest part of the world's tonnage. Its chief function will be to provide avenues to certain foreign markets, and to exercise thru its operation a regulatory influence against undue advance in ocean freight rates.

There are other very definite and important advantages enjoyed by English merchant vessels, which will require both effort and time to overcome. One of these is the existing network of English steamship agents all over the world, which has been the result of generations of aggressive shipping policy. A second is the system of coaling stations under British control at nearly every point where such facilities are needed. The second difficulty may be overcome by an increasing use of oil, either as fuel under the boilers, or thru the medium of internal combustion engines of the Deisel type. Fuel oil can be carried in the skin of the ship, under the lowest cargo floor. It does not occupy space which can be used for cargo and the cruising radius of the vessel can be so increased as to render oil burning ships independent of English bunker stations. The creation of shipping agents in all parts of the world is a much more difficult task. It has been suggested by one close student of this problem that the development of these agencies will be so slow, if left entirely to private initiative, that it will be necessary to bring to their establishment the support of the Shipping Board either thru the opening in foreign countries of agencies controlled by the Shipping Board, or by the encouragement of private agencies by making them the authorized representatives of the Government owned vessels.

It is fortunate that our shipbuilding and maritime industry which has slumbered for several generations has been aroused by war necessity, but unfortunate that the adoption of a permanent national policy must come at a time when we are taking account of the unavoidable mistakes of war, and when the control of Congress is passing from the hands of one party to another.

## Thrift and Its Necessity

To insure a lasting peace there must be no let-up in our determination to save. The necessity of thrift is world wide.

Buy CREX rugs and practice economy without sacrificing comfort and good taste. They are a most logical non-expensive floor covering for every room as well as the porch. Use them the year 'round. You'll save money, labor and care. Convince yourself.

Three weaves—De Luxe, Herringbone and Regular—in wide variety of patterns and colorings—to choose from.

All grass rugs are not CREX. Don't be deceived by imitations. Insist on the genuine.

### Free Color Catalog

### Order Dutch Bulbs Now!

Advises from big growers in Holland indicate great scarcity of bulbs this coming season and enough cannot be grown to meet the demand. To insure getting your supply send us your order at once. **Until July 1st,** not later, our present low prices for the choicest varieties of bulbs grown by specialists in Holland will hold good.

By ordering from us now instead of waiting until Fall, you make a large saving, get a greater quantity of bulbs not usually to be obtained at any price in this country, and have a much larger list of varieties to select from.

Hyacinths, Tulips, Narcissus, Crocus, give, for a small outlay of time and money, an abundance of flowers in the house from December until Easter, and in the garden from earliest spring until the middle of May.

Our orders are selected and packed in Holland, and are shipped to our customers immediately upon their arrival in the best possible condition.

They need not be paid for until they are delivered, nor taken if not satisfactory.

The Democratic Administration has been entrusted with the expenditure of an enormous sum for shipping during the war period. That mistakes were made because of hasty and perhaps, in some cases, ill considered action due to war pressure, was unavoidable. It is natural and proper that the new Congress should ask for an accounting for moneys spent. Congress would not fulfil its duty to the people if it did not take an account of stock, ask where the money had gone and review in the calm deliberation of peace the shipbuilding program before determining a permanent policy. How long this analysis will take it is impossible to forecast, for there are many matters pressing for public attention. But while it is being made, there is much useful work for the Shipping Board to undertake.

A thoro study of the types of vessels built should be made, and those selected for future construction which will prove to be the most economical operating units. The shipbuilding yards of the country must be examined carefully and those which cannot justify their existence discarded. While all this work is going on, there must, however, be some temporary program to hold together the workmen in the different shipyards, and I am sure that Congress, regardless of party, must recognize the necessity for sufficient appropriations to tide over the reorganization period. The adoption of a sound policy means so much to the industry of the United States and involves the expenditure of so vast a sum of money, that it is better to take time for deliberation and to be safe rather than sorry, but it is the hope of all those deeply interested in the rebirth of an American merchant marine that progress can be made as quickly as is consistent with safety, to the end that a merchant marine under the American flag be permanently restored, and the great impetus received under the stimulus of war be not lost, but carried forward under a wise and far-seeing policy.

JNO. WILLIAMS, Inc., BRONZE FOUNDRY (Established 1875)  
550 WEST 27th STREET NEW YORK CITY

# THE MAGNA CHARTA OF LABOR

(Continued from page 162)

- and after child-birth, including the question of maternity benefit.
- (b) During the night.
  - (c) In unhealthy processes.
  4. Employment of children—
    - (a) Minimum age of employment.
    - (b) During the night.
    - (c) In unhealthy processes.
  5. Extension and application of the International Conventions adopted at Berne in 1906 on the prohibition of night work for women employed in industry and the prohibition of the use of white phosphorus in the manufacture of matches.

Three resolutions adopted by the Commission on International Labor Legislation are also of decided interest.

In the first, which was proposed by the Belgian, French and Italian delegations, the hope is expressed that as soon as possible an agreement may be arrived at between the members of the League of Nations which will endow the International Labor Conference with power to adopt resolutions which shall possess the force of international law.

The second resolution, proposed by the same delegations, requests the Peace Conference, pending the signature of the Treaty of Peace, to communicate the present draft convention to the neutral powers for their information on the ground that any international code of labor legislation cannot be really effective without the coöperation of all industrial countries.

The third resolution, offered by the French delegation, proposes that the "very special questions concerning the minimum conditions to be accorded to seamen" shall be dealt with at a special meeting of the International Labor Conference devoted exclusively to the question of seamen.

## ENGLAND'S INCREASING LIQUOR BILL

British economists are alarmed at the rapid increase in the consumption of alcoholic beverages during the war. As the figures and diagram show, the amount spent by the people of the United Kingdom on liquor last year was more than 50 per cent

1912—\$830,000,000

1914—\$820,000,000

1915—\$910,000,000

1916—\$1,020,000,000

1917—\$1,295,000,000

1918—\$1,295,000,000

greater than in any year before the war. This does not include intoxicants supplied to the army and navy abroad. Considering that millions of men were taken out of the country for these services this shows that the stay-at-home population, especially the women, drank much more heavily than formerly. The Government endeavored to stop this waste of food material by curtailing the production and diluting the beer. But the higher the price and the weaker the beer the more was bought. In 1918 nine hundred thousand more barrels of beer were drunk than in 1917. A recent order of the Government allows 5,000,000 more barrels of beer and 6,000,000 gallons of spirits to be sold.

The people of Great Britain spent during the war five billion dollars on alcoholic drinks. But because of the dilution of beer the total alcohol consumed in 1918 was 60 per cent less than in 1913. Of this alcohol 72 per cent was consumed as beer, 23 per cent as spirits and 5 per cent as wine and cider.

# Semi-Centennial of YALE

## Fifty Years of Service

This statement by the Company's Chairman, who has been the guiding force in the organization since it was founded, forms the concluding page in a Semi-Centennial booklet just published that tells the story of the Company's growth from a small shop to world dominance in its field—a true romance of American business. It will be sent to you free, upon request.

*"There is no legacy so rich as honesty"*  
—All's Well that Ends Well

WITH entire sincerity I can say that I believe the guiding principle of those by whom this Company has been built up has been Honesty, of purpose and of endeavor. Honesty in design and production, that each article shall be right for its purpose. Honesty in representation, that the buyer shall not be misled. Honesty in pricing, that quality shall not be sacrificed to cheapness. Honesty in all relations with employees, customers and the public. If then the future may be judged by the past, I predict with confidence that the policy of honest effort and honest dealing, maintained during the past fifty years by those who founded and built up this business, will be continued in the years to come by their successors, and will win rewards in the future even greater than in the past.

While it is true that this business has grown because it has prospered, it is equally true that it has prospered because it has grown.

# ARE YOU A BLONDE?

If so, Dr. Blackford will tell you what your mental and emotional qualities are likely to be. The same if you are a brunette.

When you really know the difference between the blondes and brunets, the difference in their characters, temperaments, abilities, and peculiar traits, you will save yourself many a mistake.

To be a good judge of other people you must know these things.

You persuade a blonde in one way, a brunette in another. Blondes enjoy one phase of life—brunets another.

Blondes make good in one kind of a job, brunets in another.

You manage blondes best, as employees, with one policy—brunets with an entirely different policy.

The history of nations—of civilization—is woven through and through with these fundamental differences. To know these differences scientifically is the first step in judging men and women, in getting on well with them, in mastering their minds, in making them like you, in winning their respect, admiration, love, friendship.

Dr. K. M. H. Blackford, the famous character analyst and employment expert, has put the secret into a wonderful little book entitled "Blondes and Brunets," cloth bound. Only 48 pages but packed full of valuable information for you.

Dr. Blackford has specialized on this subject for 20 years and is retained by many large corporations.

The book is fascinating. In a half hour you will get from its pages the most valuable secrets that ever came into your possession. 30 CENTS (in stamps) brings it to you by return mail. Send for it today.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. Finish the Job. By Carter Glass.

1. The members of your class may give great assistance in selling Victory Bonds. Speak to your class earnestly and sincerely. Tell why Victory Bonds are necessary, and then give practical suggestions for aiding in the sale of bonds. Base your speech on the title "Finish the Job."
2. Give the derivation and the meaning of every one of the following words: exigency, computation, cumulative, retrenching, reactionary, verve, avarice.
3. "We hear it said that the spirit of the world is broken." Explain what is meant by "The spirit of the world." Tell of any event, or series of events, that will show "the spirit of the world" in a time of peace.
4. Contrast the present condition of France and that of the United States.
5. "In France seventy thousand Americans sleep beneath the sod." Give a speech in which you show your hearers the duty that you and they owe to the dead heroes.
6. "Nothing is impossible." In one paragraph emphasize some apparent impossibility of the past; in another paragraph show how the "impossibility" was overcome.
7. "To go back is not an American characteristic." Develop the sentence by giving a clear account of any historical incident that may be used in illustration.

#### II. What Happened in the Ukraine. By Edwin E. Slosson.

1. "Again the Crimea has become a battlefield." Give a brief and clear account of the Crimean War.
2. Give your class an account of the events that led to the charge of the Light Brigade at Balaklava.
3. Read aloud Tennyson's "Charge of the Light Brigade."
4. What spirit does Tennyson emphasize in his poem?
5. Read aloud Tennyson's "Charge of the Heavy Brigade at Balaklava."
6. Compare and contrast the two poems.
7. Tell the story of some event in the recent war that may be compared with the event named in either of Tennyson's poems.
8. What characteristics are necessary to make a thoroughly good war poem?
9. Read aloud any notable poem based on the recent war.
10. Prepare an exposition on the subject, "The People of the Ukraine."
11. Prove that the Ukraine is an important section of Europe.
12. Narrate the recent history of the Ukraine.
13. Explain why the United States is deeply interested in the Ukraine.

#### III. Don't Give Up the Ships. By Irving T. Bush.

1. Point out the principal proposition presented in the article.
2. Point out the principal divisions of the article.
3. Point out examples of refutation.
4. Explain the value of refutation in debate.
5. Point out an example of analogy. What is the value of analogy in argument?
6. Sum up the practical suggestions made in the article.

#### IV. The Story of the Week.

1. Give a talk in which you explain the recent work of the Peace Congress.
2. Explain the present situation in Russian affairs.
3. Give a brief account of the most important recent events in the United States.

#### V. My Way with Weeds. By F. F. Rockwell.

1. Show that the article is successful, or not successful, in the following points: introduction, development, specific instance, conclusion.

#### VI. Move Your Living-Room Out-Doors. By Mary Harrod Northend.

1. Write a short story in which you make use, incidentally, of much of the information presented in the article.

#### VII. Gipsying De Luxe. By John R. Eustis.

1. Comment on the effectiveness of the title.
2. Show how the article is related to Stevenson's "Inland Voyage" and "Traveling with a Donkey."
3. Write a short story that will make use of the information presented in the article.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Progress Toward Peace—Story of the Week, "The Preference of Justice Over Interest."

1. Why is there reason to believe that the Germans may reject the Peace Treaty as offered? What will happen in that case?
2. Why is it planned to have the Germans sign the treaty in the Hall of Mirrors at Versailles?
3. State the pros and cons of the dispute over the Adriatic. What will happen if Italy's claims are allowed? If they are disallowed?
4. What were the terms of the Pact of London referred to in the President's appeal?
5. How do the terms of the armistice limit Italy's claim?
6. "America is Italy's friend." What is the basis for this statement?
7. State the pros and cons of the dispute over the Shan-Tung Peninsula. What will happen if Japan's claims are allowed? If they are disallowed?
8. Should the Americans enter into a guarantee to France such as is rumored to have been drawn up at the Peace Conference?

#### II. Ukraina and the Allies—"What Happened in the Ukraine."

1. Locate Ukraina on the map. Why is this region more important economically than Great Russia?
2. Under what circumstances did Ukraina assume its independence? Was this an advantageous move for the Ukrainians? for the rest of the world?
3. What attitude have the French assumed in the recent struggles in Ukraina? the British? the Americans?
4. Why was the petition of the Ukrainian representatives for admission to the Peace Conference denied?

#### III. A New Industrial Era—"A Steering Chart for International Labor," "The Magna Charta of Labor."

1. Why is Mr. Gompers president of the Labor Conference? Why is Mr. Hurley the second American member?
2. Summarize the "Nine Points." How many of them are already effective or partially effective in your state?
3. Outline the organization and procedure of the "permanent organization for international labor legislation" proposed by the commission.
4. What executive and judicial organization and procedure is proposed?
5. If, as the analysis of the commission's work suggests, "there is no compulsion involved in the whole matter," is the author justified in calling the document "the Magna Charta of Labor"?

#### IV. Our Future Shipping Policy—"Don't Give Up the Ships."

1. What is Mr. Bush's solution of our future shipping problem? Compare this solution with that of Mr. Hurley as given in The Independent of April 12.
2. "When the war came, our ocean carriage system broke down completely." Why?
3. What present advantages in shipping has Great Britain over the United States? What steps must be taken if our shipping is to be put on a par with that of Great Britain?
4. What method of aiding American shipping does Mr. Bush suggest?

#### V. The Victory Loan—"Finish the Job."

1. Summarize the "cold-blooded" reasons why the American citizen should invest in the Victory Loan.
2. Summarize the promptings of sentiment which should impel him to "finish the job."
3. Is Secretary Glass's appeal made to reason or to sentiment? Do you regard it as the most effective appeal which could be made?

#### VI. State Control and Ownership—"The Real North Dakota Question."

1. Why would the people of industrial communities "not find the Non-Partizan League exciting"?
2. What is the "real difference between the earlier radical 'arousements' and the North Dakota enterprise"?
3. The editor believes that the North Dakota enterprise will break down, "but that out of the experience will come a policy that will be for the well being of all concerned." Do you agree with both propositions or with either?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## REMARKABLE REMARKS

CHARLIE CHAPLIN—I'm a nut.

MARSHAL FOCH—Don't be too sure.

MARY GARDEN—I shall continue to bloom.

ADMIRAL MAYO—John J. Pershing is a wonder.

JOHN GALSWORTHY—Avoid the evils of herd life.

OTTO H. KAHN—Capital is entitled to a living wage.

CYRIL KING—I enjoy stage kisses as much as anybody.

MRS. HAVILAND LUND—No man ever fought for a boarding house.

GABRIELE D'ANNUNZIO—The Allies are iniquitous, ungrateful and forgetful.

SENATOR SHERMAN—The Democratic party today is a political monarchy.

DR. WONG CHING WAI—The idea of democracy has permeated everywhere.

NIKOLAI LENIN—A communist state cannot exist in a world of capitalist states.

OPERA CONDUCTOR BODANZKY—There is going to be a great reaction toward Wagner.

BILLY SUNDAY—You cannot win a baseball pennant by handing out windy statements.

ANNE RITTENHOUSE—Paris is studying over frocks that are little but ostrich feathers.

ED. HOWE—The most common type of a rabbit is a man who is afraid of his women folks.

CARL LINDER—A married man has the best chance of becoming a successful marathon runner.

ELLIS PARKER BUTLER—The wretches who have dared to bring Bolshevism to our shores deserve no mercy.

ADMIRAL SIMS—Don't pay any attention to the people of this country who are yapping at John Pershing.

CAPTAIN ELLIOTT, M. P.—The politics of the Victorian era were governed by men with hot heads and cold feet.

MAJOR GENERAL LEONARD WOOD—The pacifists tell you lies when they say that war, as an institution, is dead.

DR. C. K. MILLARD—International competition in birth rates is to be avoided just as is competition in armaments.

GRANTLAND RICE—What has become of Steve Ryan's idea to manufacture a golf ball that squeaks when it gets lost?

REV. HARRY F. WARD—I would never advise any man to obey any law or any court which he believed to be unjust.

BARON GOTO—We no more expect America to interfere in Korea than you expect us to interfere in the Mexican situation.

CAPTAIN ARCHIBALD ROOSEVELT—General Leonard Wood was the only man in the United States able to combine deeds with words.

MAYOR J. E. HOUER OF TOPEKA—We don't wish to rub it in, but we chance to be the Kansas man who voted for Mr. Taft in 1912.

REV. "SANDY" MCGAFFEY—The present order of things gives us too many little anemic churches without any striking force

in the community, poor in architecture, in equipment, in preaching power unable to command the attention of the neighborhood.

MR. CLEMENT—A German looks "down" at a woman, an American looks "up" to a woman and a Frenchman looks "at" a woman.

MRS. WILLIAM G. McADOO—Women have proved during this war that they can do more than even their most ardent advocates believed.

CHAUNCEY M. DEPEW—While on the subject of politics I might mention that the Republicans are going to win the next chance they get.

GEORGE S. WARD—Even tho the price of flour falls so that it costs the bakers of the country no more than the water they use in their bakeries the price of bread will not fall to its former level.

IRVING R. BACON—Realism, a matter of fact, common sense sort of way of looking at things, originality, enterprize and a tremendous amount of activity—these are the traits which will assure your success in life if your thumb has a spatulate tip.

## WOODEN SHIPS

They are remembering forests where they grew:

The midnight quiet and the giant dance;  
And all the singing summers that they knew  
Are haunting still their altered circumstance.

Leaves they have lost, and robins in the nest,

Tug of the friendly earth denied to ships,  
These, and the rooted certainties, and rest—  
To gain a watery girdle at the hips.

Only the wind that follows ever aft,  
They greet not as a stranger on their ways;

But this old friend, with whom they drank  
and laughed,

Sits in the stern and talks of other days,  
When they had held high bacchanalias still,  
Or dreamed among the stars on some tall hill.

—The Bookman

## THE GLITTERING DRUDGE

BY MARY CARMACK MCDUGAL

At school she wore old clothes  
Given her by the neighbors  
Who meant well without doubt.  
She always had a dragged, down-at-the-heel look,

And hurried thru with her studies  
To get home to look after  
Innumerable little brothers and sisters.

For her mother was forever ailing  
And her father usually drinking  
And always vicious.

I do not think her body was very strong,  
For her great eyes always looked weary.  
At any rate she died quietly one day,  
And the neighbors chipped in and bought  
her a casket dress.

It was the only new thing she had ever worn,

I'll warrant.

And it was not beautiful,  
Being selected for neatness,  
And because it was cheap, having been  
marked down for a sale.  
And so she was buried—never having once complained

At not having pretty things "like other girls."

And now I think of happy chattering girl  
angels

Snipping and fitting,  
Busy about her,  
Lengths of sun-lace cloth,  
Scarfs of moon glamour,  
And gorgeous draperies of flaming cloud.  
Her great eyes sparkle like the stars  
Enmeshed in misty hair.

Her poor tired heart catches the lilt of  
laughter

Of the maids  
As she surveys herself in Heaven's mirage  
Made beautiful at last,  
A glittering drudge.

Maybe I only think of her thus,  
Because it makes me more comfortable.

# The New Social Order

THE way is being prepared for a social order more wonderful than anything ever heretofore dreamed of; the conflict of modern science with theology; the study of comparative religions; the tremendous power of new social movements; all of these are but preparing the way for the new order.

Men, now understand that for every condition there is an adequate and definite cause, so that when a given result is desired, they seek only the cause by which this result may be obtained.

The discovery of a reign of law marked an epoch in human progress. It eliminated the element of uncertainty and caprice from the lives of men, and substituted law, reason and certitude.

These laws operate with scientific exactitude and those who have succeeded in obtaining a working knowledge of them, are enabled to break the bonds of environment; control elementary forces and utilize the potentialities of Infinity.

The Master Key tells of these wonderful Natural Laws and therefore substitutes definite principles for uncertain and hazy methods. An understanding of this scientific truth is the imperative condition, the underlying verity, the necessary precedent to every truly successful business or social relation.

Men are finding that permanent success is built upon honor, not upon dishonor; they are finding that the greatest and most penetrating mind loses its way hopelessly and can form no conception of the results of an action based upon a false premise.

The Master Key avoids theory, speculation and abstractions of all kinds. It confines itself to the operation of natural laws. These laws are clear, concise, definite and positive and can be demonstrated by any one.

The Master Key is not interested in conditions or effects, but in the cause by which the effects are produced, it is therefore limitless and has rewards hardly to be expressed in words.

All conditions are the result of the operation of this law, but unfortunately, the law will operate to our disadvantage just as readily as for our benefit and for this reason many are unconsciously creating discordant, destructive, inharmonious, poverty stricken conditions instead of conditions of health, abundance, elegance, beauty, refinement and wealth. It is simply a question of understanding; a question of knowing how to take advantage of natural laws.

If you have any objective in life, which you have not as yet succeeded in taking, or if you wish to add an asset of inestimable value to your present resources, the Master Key is for you.

A copy will be sent to any address without cost or obligation of any kind.

## THE NEW COVENANT

BY HAMILTON HOLT

ON Monday, April 28, 1919, the Peace Conference at its fourth plenary session adopted without a dissenting vote the Covenant of the League of Nations. The document, which we publish in full elsewhere has been greatly improved in phraseology since it was first tentatively given to the world on February 14. Moreover, most of the objections that have been made to it, especially in the United States, have been specifically met and we do not now see how it can encounter any serious opposition except from those who would oppose any kind of a league.

Much of the criticism of the Covenant has undoubtedly come from the fact that it begins with the machinery of the League. The Assembly, the Council, the Secretariat, etc., are all in the first few articles. Thus the impression has undoubtedly gained currency that an attempt has been made to set up a super-government which all the nations that become members of the League must obey. The fact is, the framers of the Covenant have been scrupulously careful not to limit national sovereignty in the smallest degree. The League of Nations is in no sense the beginnings of "world state" which the historian Freeman has said when it comes into existence will be "the most finished and most artificial production of political ingenuity." The Covenant is rather a contract in which the signatory powers agree to do or not to do certain things. The agencies by which these things are to be done are not the masters but the servants of the confederated states. I have taken the pains to go over the Covenant article by article and paragraph by paragraph and I herewith set forth in plain language what the nations covenant who enter the League. I think I have not failed to enumerate any essential agreement.

1. They agree that war or the threat of war is the concern of all.

2. They reserve the right to take any action deemed wise to safeguard the peace of the world.

3. They agree that the making of war contrary to the Covenant shall be considered an act of war against all members of the League.

4. They undertake to respect and preserve each other's territory and political independence as against external aggression. But it is expressly provided that this does not affect the Monroe Doctrine.

5. They accord to each member the right to call the attention of the League to anything that threatens to disturb the peace of the world.

6. They agree that any member can bring about a submission of its dispute to the proper organs of the League by giving notice of the existence of the dispute to the Secretary General, who will arrange for a hearing.

7. They agree to submit any case likely to lead to war either to arbitration or to conciliation.

8. They will in no case go to war until three months after an arbitral award or the recommendation of the Council.

9. They will carry out in good faith any arbitral award.

10. They agree to take disputes not submitted to arbitration to the Council.

11. They will furnish a complete statement of their case to the Secretary General who will make all arrangements for the hearing of it by the Council.

12. They will not go to war against any member that carries out the unanimous recommendations of the Council.

13. They will exert economic pressure upon any nation going to war contrary to the Covenants of the League. In case this is ineffectual it is made mandatory on the Council to recommend what military and naval forces shall be used.

14. They will afford passage thru their territory to the forces of the League members against an offending nation.

15. They accept the principle that peace requires the reduction of armaments to the lowest point consistent with national safety. Having reduced them in accordance with the advice of the Executive Council, they will not increase them without the consent of the Council, tho the whole matter shall be subject to reconsideration and revision at least every ten years.

16. They will exchange full information in regard to (a) their military and naval programs and (b) industries suited to warlike purposes.

17. They agree that the manufacture by private enterprise of munitions is open to great objections, and they make it mandatory upon the Council to suggest proper remedies.

18. They will make all offices under the League open equally to men and women.

19. They agree that each member shall pay its share of the expenses of the League.

20. They will register all new treaties that they make with the Secretariat and none shall be binding until so registered.

21. They will abrogate all treaties inconsistent with the Covenant and will not hereafter enter into such arrangements.

22. They will make no conquest of backward people and unappropriated parts of the world but hold them as a sacred trust for civilization.

23. They will (in such places as Central Africa) guarantee freedom of religion and the prohibition of abuses, such as the slave trade, arms traffic and the liquor traffic.

24. They will endeavor to secure and maintain fair and humane conditions for labor at home and with all countries with which they trade, and for that purpose will establish the necessary organizations.

25. They will supervise the execution of such agreements as those with regard to the traffic in women and children, and the trade in arms, drugs, and ammunition.

26. They will maintain freedom of transit and equitable treatment for the commerce of nations.

27. They will put all present and future international bureaus under the control of the League.

28. They will cooperate in measures for the control of disease and especially in the work of the Red Cross.

29. In order to carry out the foregoing agreements they will establish such agencies as (a) an Assembly representing all the members of the League; (b) a Council of Nine; (c) a Secretariat; (d) a Permanent Court of International Justice; (e) a Commission on Military and Naval Affairs; (f) a Commission on Mandatories; (g) a Commission on Labor; (h) other committees and bureaus.

In addition to the covenants and machinery by which its obligations are to be carried out, the League permits:

1. Amendments by unanimous vote of the Council and majority vote of the Assembly.

2. Resignation when a state does not abide by an amendment.

3. Secession on two years' notice provided all international obligations have been fulfilled.

4. Expulsion by unanimous vote of the Council.

5. Admission by two-thirds vote of the Assembly provided the nation seeking admission gives "effective guarantees" of its sincere intention to observe international obligations and accepts the regulations prescribed by the League in regard to its military and naval forces and armaments.

This is the League of Nations the United States is asked to enter. What action shall the American people take?

It is perfectly clear that the Senate must accept or reject it. The time has gone by when it can be amended. If the Senate attempts to tack on amendments, then any

one of the parliaments of the other forty-five nations eligible to be charter members of the League can do likewise. That means long delays and of necessity a new peace conference. Is there any likelihood that a new peace conference would do any better than the present one, or if it did that its conclusions would be any more acceptable to the various national legislatures? Besides, can the world afford to permit any delays while the Bolshevik war clouds grow blacker and ever blacker?

I believe the Covenant if adopted will constitute the greatest step ever taken for the advancement of the human race and for the abolition of what Thomas Jefferson called "the greatest scourge of mankind." It is, to be sure, only the foundation of the international structure. But it can be amended to meet the issues of coming days just as far and as fast as the nations can agree on ways and means.

If the Covenant, however, is defeated, the nations cannot go forward on an orderly basis of international coöperation, but must sink back to the old era of nationalistic competition, with its mutual hates, suspicions and intrigues, its colossal armaments and inevitable wars.

Perhaps no better advice could be given at the present juncture than that contained in a letter from George Washington when the United States Constitution was up for adoption in 1787. Said the man who had most to do with the making of our "more perfect union":

The Constitution that is submitted is not free from imperfections; but there are as few radical defects in it as could well be expected, considering the heterogeneous mass of which the convention was composed and the diversity of interests which were to be reconciled. A Constitutional door being opened, for future alterations and amendments, I think it would be wise in the people to adopt what is offered to them.

This is as good advice today as regards the Covenant as it was 132 years ago in respect to the United States Constitution. Let every citizen now make his voice and influence felt, so that the Senate will realize in no unmistakable terms the true sentiment of the country. The crisis is here. Our boys have won the war. Shall we let our old men defeat the peace?

## FIUME, FREE CITY—ITALY, MANDATORY

BY HAROLD HOWLAND

THE problem of the future of Fiume cannot be solved to the satisfaction of all concerned. The Italians demand that it shall be an Italian city. The Yugoslavs insist that it shall be Yugoslav. President Wilson has declared that it shall not be Italian. Apparently the British Prime Minister and the French Premier agree with him.

The Italian delegates feel so strongly on the subject that they have separated themselves from the Peace Conference, and have returned to Rome to ask the Italian Parliament whether it approves the stand which they have taken. The answer has been overwhelmingly in the affirmative.

From this tangled snarl there seems to be no way out, unless one side or the other gives way. But both sides give every evidence of determination to stick it out to the end.

It is regrettable to the last degree that the four great western powers, France, England, Italy and the United States, each of whom threw its full weight and will into the task of defeating Germany, should not be able to go thru to the end in unity and harmony. It is a grave menace to the positive work of reconstruction which must crown the negative work of destroying German imperialism. Is there no way out of the present *impasse* into which the Big Four have found their way?

Three things could happen to Fiume. It could be made a part of Italy; such a fate would be rendered logical by the fact that a majority of its inhabitants are Italian and that the strongest and most vital forces of civilization and

culture there are Italian. It could be made a part of the new Yugoslav nation; such a fate would be rendered logical by the facts that, if its suburbs and environs are included, a majority of the population is Slavic and that it is a natural outlet for the commerce of the Slavic hinterland. It could be made a free city.

The first of these three destinies would not satisfy the Yugoslavs. The second would not satisfy the Italians. The third, presumably, would not altogether satisfy either.

But, nevertheless, the third probably contains the most hopeful promise of harmony for the future.

A free city is a little nation in itself. Its people govern themselves. It attends to its own affairs, and presumably minds its own business. There were free cities in the Middle Ages which were prosperous and self-respecting and successful. In modern times Hamburg, Lübeck and Bremen are free cities and also integral parts of the German Empire.

There would be real advantages in such a disposition of the fortunes of Fiume. Fiume is the natural outlet for the commerce not only of the Yugoslav hinterland, but of the Czechoslovak countries to the north, and, as President Wilson pointed out in his published statement last week, of Hungary and Rumania. A free city would serve better as the outlet of the commerce of several different countries than would a city which was an integral part of one of them, such as Yugoslavia.

In the second place, to make Fiume a free city would be

to enlist time as an all-powerful ally in the cause of harmony and good feeling. No one would dare predict what will be the destiny, in a generation or in two, of the new nations that are being remolded out of the fragments of the Austro-Hungarian monarchy. No one can tell what will be the progress in political development and national and international mechanism and relationships in the decades of readjustment after the Great War. No one would be safe in asserting just how the League of Nations will develop in the years to come. It would be the part of wisdom and sagacity to leave such a vexed question as that of Fiume in solution for definite determination at some future time.

If Fiume were made a free city, the possession neither of Yugoslavia nor of Italy, the experience and the wisdom that will have accumulated, say, in a decade, will be immensely valuable in determining what shall be its ultimate relation to the neighboring lands.

This is what President Wilson seems to have proposed; he suggests that it should have "a very considerable degree of genuine autonomy." But he adds a stipulation, stated as tho it were a matter of course, which is of doubtful wisdom or justice. The free city, he says, "should be included, no doubt, within the customs system of the new Yugoslavic state." Such a disposal will hardly satisfy the majority Italians of Fiume. It would solve the question in a one-sided way, and in effect make Fiume a Yugoslav city, as Hamburg and Bremen, free cities lying within the bounds of the German customs union, are German cities.

If Italy is not to have Fiume, neither should Yugoslavia. It should be made a free city—and a free port, within the customs system of no other state—perhaps for a definite term of years, with the ultimate decision as to what shall happen then committed to the League of Nations.

But something more than this should be done. The free city of Fiume should be under the protection and the direction of the League of Nations, with Italy as the mandatory nation. Article XXII of the New Covenant reads as follows:

To those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the states which formerly governed them and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, there should be applied the principle that the well being and development of such peoples form a sacred trust of civilization and the securities for the performance of this trust should be embodied in this Covenant.

The best method of giving practicable effect to this principle is that the tutelage of such peoples be intrusted to advanced nations who, by reason of their resources, their experience or their geographical position, can best undertake this responsibility, and who are willing to accept it, and that this tutelage should be exercised by them as mandataries on behalf of the League.

The character of the mandate must differ according to the stage of the development of the people, its geographical situation of the territory, its economic condition and other similar circumstances.

The new free city of Fiume would be a community which would emphatically and decidedly need special aid and support from friendly hands in the beginning and the development of its new life. It is true that the plan of the tutelage of mandatories was devised chiefly for peoples not yet in an advanced stage of civilization. It is true that the people of Fiume cannot be considered as falling within that category. But the principle of the trusteeship of the League and of the guardianship under the League of a strong and highly civilized power is one which could with perfect logicality be applied to a case such as that of the city of Fiume.

If Fiume were to be a free city, under the guardianship of a mandatory, Italy would be the single desirable choice. Not only because a majority of its people are Italian, but because there is no other "advanced" nation, which by reason of its resources, its experience and its geographical position—as the Covenant lays down—is fitted to undertake this responsibility.

Yugoslavia is as yet but a pious hope. The new nation has no government, no history, no distinctive civilization.

It remains to be seen what Yugoslavia can become. It would be unjust and unwise to commit the destinies of the Italian majority of the population of Fiume to the hands of the new nation, whose future is full of aspirations but clouded with uncertainty. The history of Serbia, one of the major component parts of the new State, is hardly such as to justify setting up Serbia as the guardian of a new community with its independent way to make in the world.

Italy is a great power, a nation of historic and highly developed civilization and culture. It is a characteristic Italian habit to display tolerance and generosity in dealing with people of other bloods within its borders. There are Slavs in north-eastern Italy who would not, if they could, be anything but Italian. There are French in north-western Italy who are perfectly content to call Italy their fatherland. The Italian believes in individual freedom, not only for himself but for the other fellow. It could never be said of him as it was said of the Pilgrim Fathers, that they came to America to worship God in their own way and to make everybody else do the same. The Italian knows how to get along with others because he accords to them the same liberty that he demands for himself. Italy, as a mandatory under the League of Nations, for the free city of Fiume, would have every prospect of success.

## PREPAREDNESS IN THE SCHOOLS

**D**URING the great "preparedness" agitation that swept over the country in the first part of the war, the State of New York passed a law making it compulsory that all boys from sixteen to nineteen (with certain exceptions) receive military training.

The State Committee on Education has just been studying the effects of this law and has come to the following conclusions:

First—The course of training is too brief to be of any military value.

Second—It interferes needlessly with school work and has thrown into confusion the whole educational system.

The committee therefore comes to the conclusion that "a training for a high type of citizenship and good physique can be attained better thru other methods," the chief of which are physical education and summer camps.

This is sound sense. Even the war worshipping Germans never put military training into the schools.

## WILLIAM OF HOHENZOLLERN TO THE BAR

**T**HE international indictment, trial and punishment of the head of a nation is without precedent in human history. But the Great War is without precedent in human history.

The Allied nations at Paris are engaged not only in making peace with Germany, but in rebuilding a world in which such offenses against humanity and civilization as Germany perpetrated shall be made, if not impossible, so costly to the aggressor as to be improbable. An essential part of such a reconstruction is the stern punishment of the aggressor.

The civilized opinion of the world does not want William of Hohenzollern, formerly German Emperor, punished in any spirit of retaliation or revenge. It wants him adequately punished as an impressive demonstration that not even the self-denominated "All Highest" is above the law and the requirements of justice. It wants him punished as solemn notice to all men for all time that there is no superman, no supernational, whose arbitrary acts against the rights of mankind will be permitted to go unattended by the consequences of retributive justice.

The Peace Conference has adopted a wise and logical procedure for bringing William of Hohenzollern to the bar of

international justice. He will be indicted by a prosecuting body instituted by the nations who have joined together to oppose and destroy the German and to rebuild the world fabric. His extradition will be demanded from Holland, and Holland cannot refuse to grant it. He will be brought before a High Court of the Nations, composed of five judges appointed by the United States, Great Britain, France, Italy and Japan, and tried, not for offenses against international law, but for "a supreme offense against international morality and the sanctity of treaties."

"In its decision the tribunal will be guided by the highest motives of international policy, with a view to vindicating the solemn obligations of international undertakings and the validity of international morality."

It would be a great misfortune for the world if William of Hohenzollern should go unpunished. "Extreme remedies," said Hippocrates four hundred years before Christ, "are very appropriate for extreme diseases." The tribunal must not follow precedents; it must create them.

## THE PRESIDENT'S FRIEND

Colonel House—a boot licking, pussy footing Texas politician—a sort of super valet to . . . his sublime and gracious majesty, Woodrow the First, and thank God, the last. *Fort Wayne News.*

**W**E know Mr. House for a modest, unassuming, agreeable, fairminded, democratic gentleman, who wishes all men well and whose chief desire is to be permitted to serve in some way his day and generation. Probably no living American save one is at this moment rendering a more conspicuous service to his fellow men.

## THE BRITISH WAY WITH SOCIAL UNREST

**T**HAT famous "Short Way with Dissenters" never became the actual British way either with dissenters or with any other group of the dissatisfied. The British way has always been to "stop, look and listen," find out the facts, weigh and measure the volume and the momentum of impending trouble and then, by common sense and compromise, find a readjustment with a minimum of violence and waste.

This is the British way now. While all Europe on the other side of the Channel is living miserably in chaos or in apprehension of it, and while the United States as usual is "assisting" (in the French sense) by looking on at social revolution and doing nothing to avert its possible outbreak here, Great Britain has opened up the whole question of a democracy which shall comprehend industrial no less than political, religious and educational relations, and is rapidly formulating a pragmatic compromise that promises to put the Empire well on the way toward maximum production, just distribution and cheerful living.

Out of the medley of recriminations, demands, suggestions and Utopias: the contentions of employers, the pretensions of trade unions, the programs of nationalization and other forms of public ownership, the "Lo here and Lo there" of state socialism, Marxian socialism, syndicalism, coöperation and individualism, has been extracted and organized a small, consistent budget of practical propositions. It multiplies possibilities instead of curtailing them at the same time that it harmonizes conflicting interests and provides a way for settling quarrels which is likely to be feasible. Consistently with it there can be as much nationalization or municipalization as the people of Britain want, and as much gild socialism and coöperation as can get support and make good, but the basis of the whole plan is a frank recognition that at the present time industry is carried on by capitalist employers organized in employers' associations, and wage earners, organized in trade unions; and the starting point of compromise and reconstruction is the

common sense decision to take these organizations as the public finds them, recognize their purposes and powers, and hold them to accountability. The authority that is to recognize them and enforce their responsibility, and see to it that agreements are carried into effect, is the British Government.

The plan is the work of a conference of capital and labor, called into existence by the Government, and it is contained in the report of its five hundred representatives of the two groups. Sir Robert Horne, Minister of Labor, has been chairman of the conference, and Mr. Arthur Henderson, as chairman of the labor side, has been, as was to be expected, a dynamic factor. On the side of organization it provides for a national council of four hundred representatives, one-half of them to be elected by the employers' organization and one-half by the trade unions. This council is to be recognized by the Government as an "official consultative authority" on industrial relations and to be "the normal channel" thru which the opinion of industry is to be sought. The basis of procedure provided is a universal recognition of employers' organizations and trade unions and insistence that both employers and working men shall "accept the jurisdiction of their respective organizations."

The part that the Government is to play, it is proposed, shall for the present consist in the parliamentary enactment of certain recommended measures, the chief of which are: a forty-eight hour labor week, a minimum wage basis, discouragement of systematic overtime, extension of the short time work expedient to meet unemployment, an increase of state provision for unemployed workers on a contributory or a non-contributory basis as may hereafter be determined, state provision of educational opportunities during unemployment, and a raising of the legal age of child labor.

In substance, it will be seen, the whole plan is a try out of collective bargaining and a creation of industrial partnership on a nation-wide scale. With trade unions and employers' organizations acknowledged as of co-equal power and authority, every working arrangement must in practice be acceptable to these equal contractors.

Trade unions came into existence because the individual wage earner without resources and facing immediate want if unemployed was at a hopeless disadvantage in bargaining with a capitalist employer. The capitalist employer could exploit him, and one unscrupulous exploiter by unfair competition could force ninety-nine employers disposed to be considerate and just, to fix wages and conditions of work at the exploited margin. To break the power of the trade union employers have persistently fought against recognizing it and, whenever possible, they have given preference to non-union labor and otherwise abetted it.

As a judgment of common sense it is probable that the proposed arrangement will in fact equalize bargaining status and, if it does, it is further probable that a true industrial democracy will come into existence. For in an industrial bargain between equals nothing short of a close approximation to equality of control and a distribution of product substantially on the just basis of the ascertained value of contributed services is likely to "go."

One suggestion may be offered. There are possibilities of a deadlock in the proposed plan for the constitution of the national council of four hundred. Employers could send to the council progressive men or reactionaries. The trade unions could send moderate men or extremists. Under irritating circumstances reactionaries and extremists would face each other. It would be far better if under all circumstances a considerable body of centrists could be depended upon to mediate between the extreme right and the extreme left. This could be assured if it were provided that one-half of the employers' representatives should be elected from the whole body of employers by trade union votes and that one-half of the trade union representatives should be elected from trade unionists by the votes of employers.

# THE STORY OF THE WEEK

## The Question of Kiao-chau

The unanimous acceptance of the League of Nations

Covenant in plenary session without argument or protest was something of a surprize to the outside world because it had been stated that Japan would again bring up the question of racial equality and would refuse to join the League unless it was stipulated that there should be no distinction made by the incorporated nations on the ground of race. But Japan was also insistent upon the recognition of her claim upon the German concession on the Shan-tung peninsula, and it is surmized that it was in consideration of some concession on this point that Japan consented to keep silent upon the race question, with the understanding that this might be brought up at some future time after the League of Nations is established. The terms of that agreement have not yet been made public. The question of territorial rights in China has been complicated by the disclosure of the existence of various secret treaties between Japan, Russia and China made during the war. The contents of these have not been fully disclosed, but it is understood that they involve a considerable infringement upon China's sovereignty and territorial integrity. The Chinese, claiming that these concessions to Japan were obtained under duress, have asked that they be abrogated, but Japan refuses to give way. The question involved is somewhat similar to that of the European secret treaties, and it was supposed that President Wilson's decided stand on the Dalmatia question was

© Harris & Fening, from Press Illustrating

**THE FIRST OFFICER OF THE LEAGUE**  
Sir James Eric Drummond was nominated by President Wilson on April 29 to be the first Secretary-General of the League of Nations. Sir Eric has been private secretary to Arthur J. Balfour, the British Foreign Secretary, since December, 1916. He was previously secretary to Sir Edward Grey, while Sir Edward was the British Foreign Secretary, and from March, 1912, to June, 1915, he was private secretary to Herbert H. Asquith, then Premier of Great Britain. Sir Eric has been in the British Foreign Office since 1900.

determined in part by his desire not to establish a precedent for the Far East.

Germany obtained from China in 1898 a ninety-nine year lease of two hundred square miles about the port

of Kiao-chau in compensation for the murder of two German missionaries. On this the German Government had built the handsome city of Tsing-tau and had obtained railroad and mining concessions which virtually gave her control of the Shan-tung peninsula. At the outbreak of the war an expedition from Japan accompanied by a few British besieged and took the city, which has ever since been ruled and occupied by the Japanese as tho it was their own territory. It was, however, stated by the Japanese Government in 1914 that the territory should eventually be returned to China. In confirmation of this reference is generally made, in the international discussions of the questions, to the cablegram of Japanese Count Okuma to The Independent August 31, 1914.

As Premier of Japan, I have stated and I now again state to the people of America and of the world that Japan has no ulterior motive, no desire to secure more territory, no thought of depriving China or any other peoples of anything which they now possess.

It will be noted, however, that the phraseology used—"no thought of depriving China or any other peoples of anything which they now possess"—is not so specific as is sometimes assumed, for it might be argued Kiao-chau had virtually passed out of China's possession sixteen years before.

## The Fiume Treaty

The discussion resulting from the refusal of President Wilson, backed by Premiers Lloyd George and Clemenceau, to concede the Adriatic port of Fiume to Italy turns largely upon the

## KIAO CHAU, THE BONE OF CONTENTION IN THE ORIENT

It was officially announced from Paris on April 29 that all former German concessions in Kiao-chau would be transferred without reservation to Japan, who on her part undertakes to restore full sovereignty in the Shan-tung Peninsula to China, retaining there only economic privileges. Japanese troops are to be withdrawn as soon as possible, the whole transaction to be under the guarantee of the League of Nations. Upon the matter of Kiao-chau, which was leased by China under compulsion to Germany in 1898, the Germans built a handsome city, which, as may be seen from the photograph, looks as tho it were in Europe instead of Asia. The Japanese captured the city of Tsing-tau at the beginning of the war.

#### WHAT ITALY WANTS

The black area is the territory which, according to the armistice, Austria-Hungary has relinquished and which, according to the treaty of London, was ceded to Italy. The Italians also demand Fiume, which is beyond this line. President Wilson holds that Fiume should be left as a Croatian port or internationalized, and that Dalmatia, mostly peopled by Yugoslavs, should not be annexed to Italy.

Pact of London of April 26, 1915, between Italy, Great Britain, Russia and France. Article 16 of this stipulates that "the present treaty is to be kept secret." It was so kept until the Bolsheviks invaded the Russian Foreign Office and published such documents as they thought would discredit the aims of the Allies. No official version of the treaty has been given out. It has been claimed by Italy that the version given out by the Bolsheviks is inaccurate in some details, but it has not been repudiated or corrected by any of the powers concerned. President Wilson implies that the American Government did not know the contents of the secret treaty when the United States entered the war and it is said that it was not shown to all members of the British and Italian governments. Since only a few American and British papers published the text of the treaty at the time when it was disclosed in Petrograd it may be of interest to mention some of its main points.

The treaty provides first that Italy shall actively intervene within a month from the date of signing, throwing her troops against Austria-Hungary while Russia struck at Germany. The naval forces of France and Great Britain shall "render uninterrupted and active assistance in Italy until the Austrian navy has been destroyed or until peace has been concluded." In regard to the limitations of the boundary line, the treaty provides that

In the future treaty of peace, Italy shall receive the district of Trentino: the Southern Tyrol to its natural geographical frontier, the Brenner Pass; the city and district of Trieste; the county of Gorizia and Gradisca; the entire Istria to Quarner, including Volosca and the Istrian islands of Cherso and Lussina. . . . Italy will also receive the Province of Dalmatia within its present frontiers, . . . south to a line drawn from the promontory of Planka on the coast eastward along the watershed. . . . Italy will also obtain all the islands

situated to the north and west of the coasts of Dalmatia. . . .

The following to be neutralized: 1. The entire coast from Planka, in the north to the southern extremity of the Sabbioncello peninsula. . . . 2. The Gulf of Cattaro with its ports. . . . 3. All the islands not annexed to Italy.

The following territories on the Adriatic will be included by the Powers of the Quadruple Entente in Croatia, Serbia and Montenegro: In the north of the Adriatic, the entire coast from Volosca Bay, on the border of Istria, to the northern frontier of Dalmatia, including the entire coast now belonging to Hungary, and the entire coast of Croatia, the port of Fiume. . . . and in the south of the Adriatic where Serbia and Montenegro have interests, the entire coast from Planka to the River Drin with the chief ports of Spalato, Ragusa, Cattaro, Antivari, Dulcigno and San Giovanni di Medua.

The boundary line is prescribed in great detail but we have omitted from the above the numerous islands and islets named. The boundary is substantially that laid down in the armistice as that beyond which the Austrian troops were compelled to withdraw. It will be noticed that Fiume is expressly conceded to Croatia, Serbia and Montenegro which form the proposed Yugoslav kingdom. Italy has occupied Fiume and lays claim to it on the grounds, among other reasons, that it was relinquished at the London conference only upon the insistence of Russia which wanted to strengthen the Slavs and since Russia is now out of the game Italy should get the city. Before the war about 60 per cent of the inhabitants of Fiume were Italians, but if the suburbs and environs are included the Slavs are in considerable majority. President Wilson's opposition is mostly based upon one of his fourteen points which stipulates free access to the sea as an essential of sovereignty.

The Pact of London further stipulates that the port of Valona in Albania shall be given to Italy "in absolute possession," but Durazzo "may be given to the independent Mohammedan

state of Albania." "In case of the creation of a small autonomous and neutralized Albanian state" Italy agrees not "to resist the possible desire of France, Great Britain and Russia to distribute among Montenegro, Serbia and Greece the northern and southern parts of Albania."

The twelve Grecian islands on the Asiatic coast (Dodecanese) are conceded to Italy. They have been occupied by Italian troops since the war with Turkey in 1912.

It is stipulated that in an event of a partition of Turkey, Italy is entitled to a share equal to that of France, Great Britain and Russia. Territory thus earmarked for Italy covers the region in the hinterland of Adalia. Since France claims Syria and England Mesopotamia, Italy may demand a large section of Asia Minor.

Art. 11. Italy is to share in the war indemnity in correspondence with the magnitude of her sacrifices and efforts.

Art. 12. Italy adheres to the declaration made by France, England, and Russia about leaving Arabia and the holy Mohammedan places in the hands of independent Mohammedan power.

Art. 13. If France and Great Britain extend their colonial possessions in Africa, at the expense of Germany, they will admit in principle Italy's right to demand certain compensation in an extension of her possessions in Erythræa, Somaliland, and Libya, and the colonial areas adjoining French and British colonies.

This means virtually, of course, that Italy has the right to expand into Abyssinia.

Art. 15. France, Great Britain and Russia pledge themselves to support Italy in not permitting the representatives of the Holy See to undertake any diplomatic steps, having for their object the conclusion of peace, or the settlement of questions connected with the present war.

This article presumably explains why France, Great Britain and Russia refused to reply to the Pope's plea for peace, so it fell upon President Wilson alone to answer it.

#### The President's Position on Fiume

It is now understood that the President did not stand alone in his opposition to the Italian claims on the eastern coast of the Adriatic, but that both the British and French Governments presented similar protests to Italy, tho these have not been made public. The President's declaration, which we published last week, is said to have been shown in advance to Lloyd George and Clemenceau and approved by them. altho they are said not to like his having brought the question into the open for public discussion. On April 14, nine days before publishing his statement, President Wilson gave to Premier Orlando a memorandum of his opinion, with permission to make it public. As this paper defines more exactly the President's attitude on the boundary question, we quote some passages from it:

There is no question to which I have given more careful or anxious thought than I have given to this, because in common with all my colleagues it is my earnest desire to see the utmost justice done to Italy.

Throughout my consideration of it, however, I have felt that there was one matter in

which I had no choice and could wish to have none. I felt bound to square every conclusion that I should reach as accurately as possible with the fourteen principles of peace which I set forth in my address to the Congress of the United States on the 8th of January, 1918, and in subsequent addresses.

These fourteen points and the principles laid down in the subsequent addresses were formally adopted with only a single reservation by the powers associated against Germany and will constitute the basis of peace with Germany. I do not feel at liberty to suggest one basis for peace with Germany and another for peace with Austria.

Personally, I am quite willing that Italy should be accorded, along the whole front of her northern frontier and wherever she comes into contact with Austrian territory, all that was accorded in the so-called Pact of London, but I am of the clear opinion that the Pact of London can no longer apply to the settlement of her eastern boundaries. The line drawn in the Pact of London was conceived for the purpose of establishing an absolutely adequate frontier of safety for Italy against any possible hostility or aggression on the part of Austria-Hungary. But Austria-Hungary no longer exists.

It is commonly agreed, and I very heartily adhere to the agreement, that the ports of Trieste and Pola, and with them the greater part of the Istrian Peninsula, should be ceded to Italy. . . . There would be no justification in my judgment in including Fiume or any part of the coast lying to the south of Fiume within the boundaries of the Italian Kingdom.

Fiume is by situation and by all these circumstances of its development not an Italian but an international port, serving the countries to the east and north of the Gulf of Fiume. Just because it is an international port, and cannot with justice be subordinated to any one sovereignty, it is my clear judgment that it should enjoy a very considerable degree of genuine autonomy, under which it should be included, no doubt, within the customs system of the new Yugoslav state.

I believe that there will be common agreement that the Island of Lissa should be ceded to Italy and that she should retain the port of Volona.

**The Italian Attitude** That the Italian people and Parliament support the Government in its Adriatic claims was shown by the popular demonstrations that greeted Premier Orlando on his return from Paris and the vote of confidence which he received from the Chamber of Deputies by 382 votes to 40. The parliamentary opposition was Socialistic.

A great mass meeting was convoked on the Capitoline Hill by Prince Colonna, the mayor of Rome, at which resolutions were passed unanimously urging the annexation of all territory given to Italy by the Treaty of London and Fiume in addition. Then the crowd marched in procession to the Quirinal Palace and greeted the King and Queen with shouts of "Fiume! Dalmatia or death!" Italian journals resented what they regard as the President's appeal from the Government to the Parliament, and suggest that he submit his attitude to Congress and see if he will get as good support in Washington as Premier Orlando got at Rome.

How the Italians regard the treatment they received at Paris is expressed by Signor Federoni, a Roman deputy:

France wanted a peace which gave her Alsace-Lorraine. England took up arms for the independence of Belgium, lost thru German aggression. America joined the conflict to create a peace based on justice and to found a permanent Society of Na-

tions. The war won, France exacts and obtains, besides the provinces lost in 1871, the Sarre basin, extending her boundaries to the Rhine. She occupies a large part of the German colonies and keeps them, and occupies Syria, which she firmly intends to retain. But this is not French imperialism.

England makes Wilson withdraw his demand for the freedom of the seas, realizes her dream of "Mitelafrika," takes possession of Mesopotamia, invents an Emir Faisal to consolidate and extend her dominion in the eastern Mediterranean. But this is not English imperialism.

Wilson inserts in the covenant of the League of Nations the Monroe Doctrine, which makes America immune from any interference from the League; refuses recognition of the equality of races, as tho Japan had a less secure title to civilization than Yugoslavia. But this is not American imperialism. The only imperialism is that of Italy; it is Oriental Istria; it is Fiume; it is Dalmatia; it is the dream which gladdened those who fell in the hour of conflict; it is the comfort which mitigated the suffering of widows and orphans. Imperialism means those few rocks and mountains, with a total population of less than a million inhabitants, which the Italians claim.

Whatever may have been the partition of its population before the war, Fiume is now 100 per cent Italian, for people of the other nationalities have fled from the city, which is held by a large force of Italian troops, besides small French and British contingents. Other Italian forces to the number of 100,000 have been sent to Dalmatia. On the other hand, the Yugoslavs are calling new classes to the colors to fight the Italians, if necessary, for the recovery of the Adriatic coast. Italian forces have also been landed at Adalia, the Turkish port claimed by Italy under the Pact of London.

#### Confirmation of the Monroe Doctrine

Up to the present the United States has never been able to secure recognition of the Monroe Doctrine as a part of international law. It has remained merely a national policy to which other nations have been obliged to conform, altho

often with reluctance and occasionally with protests. But President Wilson, by obtaining its incorporation as Article XXI in the Covenant, has formally made it "an international understanding" and secured for it the sanction of all the nations of the League. This is made plain by the following official declaration of the British delegation at the Paris Conference:

Article XXI makes it clear the Covenant is not intended to abrogate or weaken any other agreements, so long as they are consistent with its own terms, into which members of the League may have entered or may hereafter enter for the assurance of peace. Such agreements would include special treaties for compulsory arbitration and military conventions that are genuinely defensive.

The Monroe Doctrine and similar understandings are put in the same category. They have shown themselves in history to be, not instruments of national ambition, but guarantees of peace. The origin of the Monroe Doctrine is well known. It was proclaimed in 1823 to prevent America from becoming a theater for intrigues of European absolutism. At first a principle of American foreign policy, it has become an international understanding, and it is not illegitimate for the people of the United States to say that the Covenant should recognize that fact.

In its essence, it is consistent with the spirit of the Covenant, and, indeed, the principles of the League as expressed in Article X represent the extension to the whole world of the principles of this doctrine, while, should any dispute as to the meaning of the latter ever arise between the American and European powers, the League is there to settle it.

#### The Nine Points of Labor

In the plenary session of the Peace Conference on April 28 the recommendations of the Labor Commission of the Conference were adopted unanimously for insertion into the peace treaty. These represent the result of many months of study of industrial problems by the representatives of labor and capital and government of all the great commercial countries of the world. Their aim is to

#### THE STEEDS THAT SWIM THE STYX

These monster horses of the Korean burial service were drawn thirty miles by hand to the recent funeral of the Grand Prince Yi, former Emperor of Korea, to carry the royal dead from this world to the world beyond. The funeral of Prince Yi was made an occasion for widespread demonstrations asking for Korean national independence

establish a living wage and decent conditions of work all the world over so as to prevent the strife that comes from the competition of low-grade labor. In our last issue we explained the aims and methods of this "Magna Charta of Labor," but the nine points there quoted as they came from the commission have been slightly changed in wording as adopted by the Conference. The revised version, as presented in the plenary session by Sir Robert Borden, the Canadian Premier, and explained by George Nicoll Barnes, the British delegate, is printed below:

1. The guiding principle above enunciated that labor should not be regarded merely as a commodity or article of commerce.

2. The right of association for all lawful purposes by the employed, as well as by the employers.

3. The payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in the time and country.

4. The adoption of an eight-hour day or a forty-eight-hour week as the standard to be aimed at where it has not already been obtained.

5. The adoption of a weekly rest of at least twenty-four hours, which should include Sunday wherever practicable.

6. The abolition of child labor and the imposition of such limitations on the labor of young persons as shall permit the continuation of their education and assure their proper physical development.

7. The principle that men and women should receive equal remuneration for work of equal value.

8. The standard set by law in each country with respect to the condition of labor should have due regard to the equitable economic treatment of all workers lawfully resident therein.

9. Each state should make provision for a system of inspection, in which women should take part, in order to insure the enforcement of the laws and regulations for the protection of the employed.

**Terrorism by Mail** An attempt at long-range murder on a grand scale, of Government officials and prominent citizens was discovered last week. On Tuesday, in Atlanta, the wife of Thomas W. Hardwick, former

United States Senator from Georgia, was severely burned and a woman servant was mutilated by the explosion of a small parcel which came thru the mails. The package bore a printed label with the name of Gimbel Brothers, New York, and the word "sample" on it. The occurrence seemed without possible explanation, until it was discovered two days later that it was only one of an indefinite number of similar happenings—the others, however, without evil results—in all parts of the country. Similar packages were found in the mails at points from New York to San Francisco. Sixteen of the pleasant little surprise packages were discovered lying in the New York post office, thru the quick-wittedness of a postal clerk. Charles Kaplan was on his way home long after midnight when he read in the morning paper just from the press the story of the Hardwick accident. He immediately remembered that down in the post office there were lying a number of precisely similar packages held because there was not sufficient postage on them. He telephoned at once to the night superintendent at the post office and himself hurried back downtown. The parcels were still innocently waiting for the additional stamps; and when, after many hours of cautious work on the part of the bomb expert of the New York Fire Department, they were safely taken apart, it was discovered that they were skilfully constructed bombs of a peculiarly deadly type.

Each bomb was composed of a wooden cylinder with cover, like those in which medicine bottles may be mailed. Inside were three small sticks of dynamite, several detonating caps of fulminate of mercury, and a small bottle of dark liquid, presumably sulfuric acid. The cover of the tube was held in place by two prominent brass screws, instantly suggesting the use of

a screwdriver for their removal. But it was apparent that any tampering with the screws would have broken the bottle within, have brought the liquid in contact with the fulminate of the caps, and produced all the energy necessary to explode the dynamite. The result was indicated with sufficient vividness by the experience of the servant in the Hardwick home.

There were sixteen of the parcels found in the New York post office. They were addressed to the Postmaster General, the Attorney General, the Secretary of Labor, the Solicitor General, the Chief of the Bureau of Immigration, and Mr. Justice Holmes, of the Supreme Court, all at Washington; the mayor and police commissioner of New York, the Commissioner of Immigration at the Port of New York, the Governor and Attorney General of Pennsylvania, John D. Rockefeller and J. Pierpont Morgan, and William W. Wood, president of the American Woolen Company.

All the addressees of the bombs were either men of wealth or officials who have been active in restraining the activities of I. W. W., Bolshevik and violently socialistic agitators, or who have favored the restriction of immigration or assisted in the deportation of exponents of an internationalism of a terroristic or "Red" type.

It is perfectly clear that the name of Gimbel Brothers was used merely as a blind by the senders of the packages. All the evidence suggests a "Red" campaign of terrorism of the most brutal and cowardly type.

**What Is an Intoxicating Liquor?** The Eighteenth Amendment to the Federal Constitution, imposing national prohibition, has been duly adopted, but it does not go into effect until January of next year. But meanwhile Congress has decreed by law that, from May 1

of this year, no food stuffs shall be used in the brewing of beer, the production of wine or the manufacture of any other intoxicating liquor; and that after July 1 no intoxicating liquor of any kind shall be sold. In each case the prohibition is to continue in force until the end of the period of demobilization, as determined and proclaimed by the President.

May 1 has come, and the brewing of beer and the making of wine should automatically cease. But the brewers in particular are loath to give up their business even for the comparatively short period until the boys are all home again and the army returned to a peace basis.

The brewers therefore have raised the question as to what constitutes an intoxicating beverage. The law does not define beer or erect any standard of alcoholic content which shall be accepted as drawing the line between intoxicating beverages and "soft drinks."

The Commissioner of Internal Revenue has said that beer containing one-half of 1 per cent of alcohol is intoxicating. The brewers maintain that the alcoholic content can be increased to 2¾ per cent without crossing the line between intoxicating and otherwise.

The brewers of New York, therefore, acting upon the legal advice of Elihu Root and William D. Guthrie, have decided to go on manufacturing beer with 2¾ per cent of alcohol in it, and to compel the submission of the question to the courts if the Federal Government officials do not agree with them in their definition. There was some question whether the internal revenue officers would sell the necessary revenue stamps to the brewers for use on the containers of beer of such strength. The brewers, therefore, on advice of counsel, deposited the amount of the internal revenue taxes in a bank to the order of the Federal Government and proceeded with the sale of the beer without stamps.

The provision in the law passed by Congress in relation to beer and wine reads as follows:

After May 1, 1919, until the conclusion of the present war and thereafter until the termination of demobilization, the date of which shall be determined and proclaimed by the President of the United States, no grains, cereals, fruit or other food products shall be used in the manufacture or production of beer, wine, or other intoxicating malt or vinous liquor for beverage purposes.

The contention of the brewers is apparently that the use of the words "other intoxicating malt . . . liquor" means that beer is not beer unless it is intoxicating; and that the question whether any particular malt beverage is intoxicating is one of fact to be determined by its percentage of alcohol.

**Cable Lines Return to Private Ownership** By order of the President, who acted on the advice of Postmaster General Burleson, the cable lines of the country were returned to their former owners last week. Thus ends the Government control, assumed for the purpose of facilitating the prosecution of the war, of one of the three public utilities

which have been managed by the Federal Government during the war period. The telegraph and telephone lines and the railroads are still in the charge of the Government.

Mr. Burleson recommended the return of the cable lines, not because he has wavered in his belief in Government ownership and operation, but because he is convinced that the new Congress does not agree with him, and therefore permanent Government control is not likely to be undertaken in the near future. In his statement the Postmaster General said:

For a number of years the Postmaster General had advocated the Government ownership of the telegraph and telephone systems and has urged that they should be blended with and become a part of the postal establishment, as essential agencies of communication. He is firmly convinced if such a policy were entered upon that where there are now three telegraph and telephone pole lines and sometimes four, occupying the same highway, entailing immense waste, better and cheaper service could be given by one coördinate wire agency; that by the abolition of various supervisory forces of the wire systems which would then be unnecessary; by complete unification of the systems, thereby eliminating the operating cost of the useless systems; by thoroughly coördinating the

remaining telegraph and telephone services; by the consolidation of offices and the utilization of post office buildings where practicable; by the use of stamps as a means of eliminating costly and complicated accounting forces of the Post Office Department, thereby largely eliminating those of the wire systems, that such savings could be effected that would enable those in authority during normal times to materially reduce the cost of the wire service to the people.

As to the wisdom of this course the Postmaster General has not changed his views. At the time the Government took over the control of the wires extraordinary and abnormal conditions existed, resulting in a constantly increasing and very high operating cost, which has necessarily continued.

The accentuated cost of operation and diminishing revenues, the uncertainty in the period of Government control, presented a situation that those in charge for the Government were able to accomplish but little by way of unification or to go forward with their policies of economy, and consequently were soon brought face to face with a very serious, but quite simple problem, to wit: Given—increasing cost of operation plus diminishing revenues, equals—what? There can be but one answer—increase of rates.

That the contention of the Postmaster General for a complete unification of the various wire systems is both wise from an economic standpoint and supported by sound business principles has been confirmed by the ablest experts on electrical transmission in America.

This action was taken. It was quite unfortunate, and was taken with deepest regret, but it was imperative. To an intelligent mind this increase of rates constitutes no sound reason for a change of view on the original proposition that it is economically wise for the Government to own the wire systems as a part of the postal establishment, and in no sense tends to refute the soundness of the contention that thru such ownership savings would be effected that would result in a reduction of rates.

There is quite a difference between Government ownership and Government control for a limited and very uncertain period. The present control affords no more a test of the virtues of Government ownership than could be had thru a temporary receivership in a court proceeding.

That the contention of the Postmaster General for a complete unification of the various wire systems is both wise from an economic standpoint and supported by sound business principles has been confirmed by the ablest experts on electrical transmission in America. That it should be brought about the Postmaster General still believes, preferably thru Government ownership and operation as a part of the postal establishment, but, if this is not done, then thru some means of unified control by private ownership, over which the Government should at all times exercise a wholesome regulatory supervision.

**Mr. Burleson's In announcing the Other Troubles** return of the cable lines Mr. Burleson declared that the telegraph and telephone lines will be returned to their owners as soon as legislation can be secured from Congress safeguarding the interests of the owners. But Mr. Clarence H. Mackay, president of the Postal Telegraph Company, does not feel the need to wait for protection. He addressed a letter to the Postmaster General in which he made this clear. Mr. Mackay called Mr. Burleson's attention to the fact that he already had the authority to return the lines to their owners under the proclamation of the President, and that he had already exercised that authority in the case of a large number of small telephone companies. He continued:

We observe that you have recommended

#### THE INDOMITABLE LEADER OF LABOR

When he was rather badly injured recently in a collision between the taxicab in which he was riding and a New York street car Samuel Gompers's first reaction to the accident was a request that nobody be punished for it. "It was plainly an accident." Later, when his physicians had made an examination, found two ribs fractured and recommended further X-ray search, Mr. Gompers's chief concern was over the interruption to his work on labor affairs. He returned to the United States a month or more ago from the International Labor Conference in Paris and he has been lecturing here on the internationalization of labor and directing the affairs of the American Federation of Labor, of which he is president.

to the President that the wire lines be returned to the companies, but you state before this can be done that additional legislation is necessary by the new Congress in order to safeguard the interests of the companies. We desire to state that the Postal Telegraph Cable Company asks no additional legislation to safeguard its interests and is prepared to take its lines back on one hour's notice.

We further desire to state that we shall not ask the Government to pay to the Postal Telegraph Company one dollar for the use of its lines during the period of the Government control, but shall merely ask to be allowed to keep what the lines have actually earned from the transaction of the telegraph business during the period of Government control. In order that we may formulate our plans, an early reply will be appreciated.

Meanwhile Judge Landis, of the Federal Court at Chicago, had handed down an opinion denying the right of the Postmaster General to increase telegraph rates within a state. The object of Congress having been to give the President the power to operate the wire lines in order to aid the prosecution of the war, Congress, in Judge Landis's opinion, did not intend to give to the President the right to fix intrastate rates.

In connection with this decision of Judge Landis, there is peculiar interest in the move which is to be made at once by representatives of thirty state utilities commissions to secure a Supreme Court decision on the right of the respective states to regulate the rates on all kinds of public utilities within the states, without interference by or the concurrence of the Federal Government.

The Postmaster General is rapidly becoming, if he has not already reached that eminence, the most unpopular and the most bitterly criticized member of the Administration. His attitude in the recent telephone strike, his autocratic administration of the Post Office Department, the low order of efficiency which has come to be the rule in the handling of the mails under his management, his whole attitude toward not only the employees of the Post Office Department but the whole labor problem, has disgusted even many of his own party.

Mr. Samuel Gompers, president of the American Federation of Labor, has given out a plainspoken statement in regard to Mr. Burleson:

The troubles of Postmaster General Burleson, which in a recent statement he attributes to a plot or conspiracy on the part of large American publishers, are not due solely to any dispute there may have been between the Postmaster General and the publishers to whom he refers. The most recent example of Mr. Burleson's autocratic nature does not come as a surprise to those in the labor movement who have come in contact with his administration.

Labor was long ago forced to the conclusion that Mr. Burleson was completely out of sympathy with the trend of American thought and was totally unable to comprehend what America meant when it declared war upon autocracy everywhere. Mr. Burleson needs only a wider field and a better opportunity to fit him for succession to some of the world's best known but unlamented ex-dictators. The only difficulty in Mr. Burleson's way is that the world has reached the decision that it wants no more dictators. The United States Post Office Department is one of the few places in the world not yet in accord with that decision.

Long before the United States Government took over the telegraph systems of the country Mr. Burleson's cold and autocratic treatment became known to the workers engaged in the postal service. Natural resentment has followed this course, and this resentment has increased in volume exactly in proportion to the increased field over which Mr. Burleson rules. The workers in various branches in the Postmaster General's department have come to understand thoroughly that democracy and the Post Office Department have nothing in common except that they exist under the same Government.

It has been rather a favorite pose with the Postmaster General to appear as a high-minded person, generous and sympathetic, with his employees. Always, however, this sympathy has been defined by him to mean that if any one of the employees had anything to present to him that employee might come and present his case. Under any circumstances such a course would be unsatisfactory, and intelligent employers nowhere attempt to deceive any one with that ancient and long-since-exploded idea. Only the most reactionary of brutal employers still endeavor to deal with the workers as individuals. In the case of the Post Office Department, however, where the employees are scattered thruout the United States, such an attitude as that assumed by the Postmaster General becomes not only ridiculous, but constitutes an insult and an affront to the intelligence of the men and women in his department and to the citizenship of the country as well.

The position taken by the Secretaries of the War Department and the Navy Department and various other Government departments in dealing with the workers, the declarations of the War Labor Board, approved by the President of the United States, concerning collective bargaining have failed to make the slightest impression on the mind of the Postmaster General and he has insisted upon a line of conduct as completely out of harmony with the balance of the Government as it could well be.

THE MAN WHO STIRS IT UP

Harding in Brooklyn Daily Eagle

OH, THAT LITTLE MISCHIEF!

# WHAT WILL ITALY DO?

BY ARTHUR BENINGTON

**R**ECENT despatches from London and Paris have spoken of an insurrection, or, as they put it, a "revolution," having broken out in Italy. The news has not been confirmed; on the contrary, later despatches tell of the enthusiastic rallying of the whole Italian people to the support of the Government. The earlier despatches were undoubtedly based upon the strikes that have taken place. But there is certain to be an insurrection—and that very soon—unless Italy be permitted to gather the fruits of her victory. Whether this rebellion will become a revolution and how far it will go toward Bolshevism it is difficult to foresee. There is no real Bolshevism yet in Italy, tho the doctrines preached by the official Socialists are perilously near to it; the Italian people are, however, so full of sound common sense that they are not likely to be led into the orgies of anarchy that have characterized revolution in Russia and elsewhere.

Italy has really so much reason for the prevailing discontent, that the blow of finding herself cheated by her Allies at Paris is all that is needed to cause an explosion.

Whatever goes wrong in Italy is blamed on the Government. Not on the King, be it understood, for the King has little to do with the Government, and nine-tenths of the people are intensely loyal to him, but on the bureaucracy, the Parliament and the Cabinet. "*Tempo cattivo, governo ladro!*" is a common proverb, meaning literally, "Nasty weather, robber Government," but with the implication that the bad weather is the effect of the Government's dishonesty. The "Government" is a generic term, and the average Italian looks upon it as a sort of despotic power that imposes taxes, restricts liberties and, no matter what it undertakes, always does it clumsily, slowly, and inefficiently. "The Government" is a kind of common enemy, necessary perhaps, if only as a convenient object of blame for everything that goes wrong. The average man forgets that he and his fellows are responsible for the Government, and that if they have a bad Deputy it is because they elected him.

The Italian people have suffered terrible privations during the war. They have suffered almost in silence, and their plight has been known to few outsiders, but the members of the American Red Cross and Y. M. C. A. who worked there can testify as to how desperate were the straits they were in. And a few others who, like myself, spent many months in traveling about the

country associating intimately with the people, know, for we have seen the misery, and a few of us have shared in it. The suffering is still there; in some respects it is worse than ever, altho the war is said to be over. The Government of course is blamed for all of this. But if the heads of the Government were to return from Paris bearing home the fruits of this suffering in triumph—bearing, that is, the title deeds to the Trentino, Trieste, Fiume, and the part of Dalmatia they are claiming—then the people would forgive the Government. If, on the other hand, Orlando and Sonnino return home with nothing but the Trentino and Trieste, they will have to reckon with a thoroly exasperated people, that will not be satisfied with the downfall of the present ministry but may be expected to break into open revolt.

The people welcomed the armistice with almost delirious joy, for they saw in it the end of their three years of agony. They were, like the English and the French, thoroly war-weary. Nearly half a million of their men folks had been slain in battle, more than a million of them had returned mutilated from the front, hundreds of thousands of them were starving and contracting disease in the Austrian prison camps; they had seen their babies sicken and die for want of milk; they had suffered

from cold in two coal-less winters; they had borne the pangs of hunger when meat and spaghetti and bread and cheese were scarce or not to be had at all; the women and children and old men had ploughed fields and reaped grain, had gathered and prest the grapes and olives, had driven their ox-arts many weary miles to market, when there were no young men left to work the farms; when the Government took away their oil and cheese and flour and wine and bought their splendid oxen at prices set by it and not by them, they had silently submitted; they had seen the prices of everything they had to buy double, triple, quadruple; they had paid the enormous taxes and subscribed to the liberty loans; they had seen their boys of eighteen taken away to fill up the fighting ranks that the enemy cannon had depleted—they had done all this with scarcely a murmur. There had been some grumbling, of course, for Italians are chronic grumblers; they always grumble, but they do it in a good-natured way, and there had been little more grumbling than usual. But now, the war was over, the boys would come home from the trenches, and risk their lives no more; the girls would come home from the factories and the

*The King has been called the most democratic man in Italy. In this photograph, which was taken on the lower Piave, he is wearing the cape of the common soldier*

*The Crown Prince is always spoken of by his father as "My little boy," and is never referred to as the "Prince of Piedmont"*

muls their morals no more in danger; there would be food a plenty; Wilson, the apostle of peace, would see that there would be no more wars; and peace would reign on earth forever. Such was the simple logic of the great mass of Italians.

Wilson was their idol. He was the savior of the world. They likened him to Mazzini, to Garibaldi, to Washington, to Lincoln, yes even to Jesus Christ.

They knew, for their newspapers had told them at great length, that on the far side of the Adriatic one of the whelps of the dead enemy Austria was setting itself up as a rival of Italy and barking loudly about its claims to Fiume, Trieste, Dalmatia; but it never occurred to them that there was anything serious in these claims, until they realized that some of the most influential newspapers in France and England were proclaiming that the Yugoslavs and not the Italians should rightly possess Fiume and Dalmatia.

"But we have the Treaty of London," they said confidently, "signed by France and England; and France and England will not treat that as a scrap of paper. Besides, there is Wilson; he is a just man and he will see that we get justice."

For the entire Italian people—except the "Official Socialists"—is convinced of the absolute and unquestionable justice of their claims, not merely to the Trentino and Trieste, but also of Fiume and Dalmatia. When it was suggested to them that possibly Wilson might not look on the matter as they did, they were incredulous. "But Wilson is a man of justice," they replied. Their faith in Wilson six months ago was touchingly implicit.

Wilson came to Italy; the people went wild over him. Wilson was, however, a disappointment. He said none of the things they expected he would say. He amazed the people by seeking an interview with Bissolati, at that moment the worst execrated man in Italy; Bissolati, who had just resigned his post in the Cabinet because he could not support Italy's claims to reap the fruits of her victory; Bissolati, who had just committed political hara-kiri by

announcing that he would not even claim all the Trentino!

Then Secretary Lansing officially recognized the Yugoslav Government. The press was strangely restrained in its comment, but the people were shocked and began to wonder if it might be possible that they had been worshipping a god with feet of clay. Still they were not ready to give up their childlike faith in Wilson. Faith gradually weakened, but hope remained. Up to the last they clung to the hope that when it should come to the final ac-

stead of quickly drawing up a treaty of peace with Germany and Austria and Turkey, and so ending the war and war conditions, as the Italians hoped and expected, has been spending its time trying to found a League of Nations. The League was hailed at first by nearly all the Italian people with enthusiastic delight; it appealed to their imaginations and to their immemorial democratic ideals. But as time went on, and final peace with the Central Powers was deferred; as the details of the League of Nations came to

be discussed, the Italians grew restive at the delay. And the idea that such a mixture of vinegar and milk as Yugoslavia, in which the germs of civil war had already sprouted, should be admitted to the League, made them indignant. They were willing that President Wilson's demand for the redistribution of Europe on strictly racial lines should be accepted in a general way, but the proposal to apply it to the heterogeneous mass of Serbs and Croats and Hungarians and Slovenes and Italians and Turks that floats the Yugoslav flag and calls itself a nation, seemed to them the height of absurdity. Besides, they said, this principle is not being applied against France in Alsace and Lorraine, nor against Great Britain in the German colonies (for the tutelage of these under the

Premier Orlando (left) and Baron Sonnino, Minister for Foreign Affairs, Italian delegates, who withdrew from the Peace Conference on its refusal to concede Fiume to Italy

counting Wilson would be found on their side, but the rainbow has vanished, and now they are crying: "Abbasso Wilson! Evvivi l'America!"

And again they blame their own Government, bitterly resenting its failure to place the truth before the President in a way that he would understand. Whether they are right or wrong in placing all the blame on their Government, I cannot say, for I do not know what evidence the Italian Government may have laid before Wilson, but they are certainly right in blaming their Ministry of Propaganda for failing to counteract the propaganda of the Yugoslavs. The fact is, and all intelligent Italians know it, that the Italian Ministry of Foreign Propaganda might as well never have existed.

The Peace Conference in Paris, in-

stead of quickly drawing up a treaty of peace with Germany and Austria and Turkey, and so ending the war and war conditions, as the Italians hoped and expected, has been spending its time trying to found a League of Nations. The League was hailed at first by nearly all the Italian people with enthusiastic delight; it appealed to their imaginations and to their immemorial democratic ideals. But as time went on, and final peace with the Central Powers was deferred; as the details of the League of Nations came to

be discussed, the Italians grew restive at the delay. And the idea that such a mixture of vinegar and milk as Yugoslavia, in which the germs of civil war had already sprouted, should be admitted to the League, made them indignant. They were willing that President Wilson's demand for the redistribution of Europe on strictly racial lines should be accepted in a general way, but the proposal to apply it to the heterogeneous mass of Serbs and Croats and Hungarians and Slovenes and Italians and Turks that floats the Yugoslav flag and calls itself a nation, seemed to them the height of absurdity. Besides, they said, this principle is not being applied against France in Alsace and Lorraine, nor against Great Britain in the German colonies (for the tutelage of these under the League of Nations is looked upon as merely a camouflaging of annexation), nor against Poland nor against Czechoslovakia; why then, they asked, is Italy to be the only one of the Allies against whom it is to be put into force?

Resentment against Italy's allies in the war is deep. It is especially bitter against France, for French jealousy is held responsible for setting up Yugoslavia as a rival to Italy on the Adriatic; French capitalists are known to have paid the expense of Yugoslav propaganda; France's aid to the Arabs in Italy's war in Tripoli has not been forgotten; and the persistent attempt of the French to seize all credit for defeating the Germans, for saving the remnants of Serbia, even for the great victory of the [Continued on page 229]

# *The Independent-Harper's Weekly* NEWS-PICTORIAL

## SNAKES THAT HAVE LOST THEIR STING

The "U-117," one of the German submarines that was reported to have sowed mines off the coast of the United States last year, is now tied up with several other U-boats at the Brooklyn Navy Yard, brought over here as an exhibit in the Victory Loan campaign. The former terror of the seas is so tamed by captivity that a lady can ride it safely—several parties have in fact been taken on it for excursion trips round New York harbor. But there's a trace of frightfulness left in the arrogant coat of arms on the prow, with its motto "Gott mit uns"

Photographs © Underwood & Underwood

### INSIDE A U-BOAT

At the left is the operator of a captured German submarine the "U-105"—at his post. To the layman it looks like a bewildering conglomeration of wheels and indicators and levers—so much and such complicated machinery must be packed into the exceedingly restricted space. The big U boat shown above is a mine layer—the "U-117." It mounts a good sized gun and is capable of making high surface speed in rough water

## SEAGOING SCOUTS

Not all the 300,000 or more Boy Scouts of America work and play and do a good deed every day on land. Beside the khaki-clads there are being organized all over the United States troops of Sea Scouts—boys of high school age whose qualifications and purpose are identical to the land scouts, but who wear a naval uniform and devote their chief interest to "learning the sea"

### LAND-LOCKED

Some of the Sea Scouts whose homes aren't even near a lake or river "follow the sea" perforce without going near the water. One ingenious troop rigged up this sailing vessel in the woods with a tree trunk for a mast and a deck of planks built around it. The steering wheel and sail are real and all the numerous ropes (tho of course no sea scout would be so amateurish as to call them that) are technically correct

### A CRUISE ON A REGULAR SHIP

Sea Scouts who have passed preliminary tests have a chance at a real ocean voyage. The line of boys at the top of this page are part of a crew of the "Farragut," ready for a cruise off the Massachusetts coast. Third from the left is the captain, Scoutmaster A. E. Call. The crew of every scout ship, big or small, is trained in life saving and required to pass the Red Cross tests. At the left is a practice rescue from a small boat

Central News

"LET'S GO!" IT HAS AN EXTRA MEANING TO OUR TROOPS IN RUSSIA

(In the original preamble the last sentence read "Adopt this constitution," instead of "Agree to this covenant.")

## 45114-17-1

Any fully self-governing state, dominion or colony not named in the annex may become a member of the League if its admission is agreed by two-thirds of the assembly, provided that it shall give effective guarantees of its sincere intention to observe its international obligations, and shall accept such regulations as may be prescribed by the League in regard to its military and naval forces and armaments.

(This article is new, embodying with alterations and additions the old Article 7. It provides more specifically the method of admitting new members and adds the entirely new paragraph providing for withdrawal from the League. No mention of withdrawal was made in the original document.)

## ARTICLE II

(Originally this was a part of Article I. It gives the name assembly to the gathering of representatives of the members of the League, formerly referred to merely as "the body of delegates.")

### ARTICLE III

The assembly shall meet at stated intervals, and from time to time as occasion may require, at the seat of the League, or at such other place as may be decided upon.

At meetings of the assembly each member of the League shall have one vote, and may have not more than three representatives.

ARTICLE IV

The council shall consist of representatives of the United States of America, of the British Empire, of France, of Italy and of Japan, together with representatives of four other members of the League. These four members of the League shall be selected by the assembly from time to time in its discretion. Until the appointment of the representatives of the four members of the League first selected by the assembly, representatives of (blank) shall be members of the council.

## ARTICLE IV

With the approval of the majority of the assembly, the council may name additional members of the League whose representatives shall always be members of the council. The council, with like approval, may increase the number of members of the League to be selected by the assembly for representation on the council.

The council may deal at its meetings with any matters within the sphere of action of the League or affecting the peace of the world.

At meetings of the council each member of

214

The first paragraph requiring unanimous agreement in both assembly and council, except where otherwise provided is new. The other two paragraphs originally were included in Article IV.)

## ARTICLE V

All matters of procedure at meetings of the assembly or the council, the appointment of committees to investigate particular matters, shall be regulated by the assembly or by the council, and may be decided by a majority of the members of the League represented at the meeting.

(This embodies that part of the original Article III designating the original members of the council. The paragraph providing for increase in the membership of the council is new.)

## ARTICLE VI

The first secretary general shall be the person named in the annex, thereafter the secretary general shall be appointed by the council with the approval of the majority of the assembly.

The secretary general shall act in that capacity at all meetings of the assembly and of the council.

(This replaces the original Article 5. In the original the appointment of the first secretary general was left to the council, and approval of the majority of the assembly was not required for subsequent appointments.)

## ARTICLE VII

The council may at any time decide that the seat of the League shall be established elsewhere.

Representatives of the members of the League and officials of the League when engaged on the business of the League shall enjoy diplomatic privileges and immunities.

(Embodying parts of the old Articles V and VI, this article names Geneva instead of leaving the seat of the League to be chosen later, and adds the provision for changing the seat in the future. The paragraph opening positions to women equally with men is new.)

## ARTICLE VIII

The council, taking account of the geographical situation and circumstances of each state, shall formulate plans for such reduction for the consideration and action of the several governments.

After these plans shall have been adopted by the several governments, limits of armaments therein fixed shall not be exceeded without the concurrence of the council.

*Full text of the revised draft of the Le  
changes from the original covenant are*

The members of the League undertake to interchange full and frank information as to the scale of their armaments, their military and naval programs and the condition of such of their industries as are adaptable to warlike purposes.

## ARTICLE IX

(Unchanged except for the Insertion of the words "Article I.")

## ARTICLE X

(Virtually unchanged.)

## ARTICLE XI

Any war or threat of war, whether immediately affecting any of the members of the League or not, is hereby declared a matter of concern to the whole League, and the League shall take any action that may be deemed wise and effectual to safeguard the peace of nations. In case any such emergency should arise the

# COVENANT

Nations as made public on April 27. The  
ed in black face type with each article.

Members are, left to right, sitting: Viscount Chinda, Japan; Great Britain; Vittorio Orlando, Italy; Mr. Kramarz, from left to right: Mr. Yoshida, secretary to the Japanese States; Mr. Dinoski, Poland; Milenko Vesnitch, Ser- Mr. Deamandi, Rumania; Paul Hymans, Belgium; Major Reis, Portugal; Mr. Scialoja, Italy; Mr. Larmande, France

secretary general shall, on the request of any member of the League, forthwith summon a meeting of the council.

It is also declared to be the fundamental right of each member of the League to bring to the attention of the assembly or of the council any circumstances whatever affecting international relations which threaten to disturb either the peace or the good understanding between nations upon which peace depends.

(In the original it was provided that the "high contracting parties reserve the right to take any action," etc., where the revised draft reads, "the League shall take any action.")

## ARTICLE XII

The members of the League agree that if there should arise between them any dispute likely to lead to a rupture they will submit the matter either to arbitration or to inquiry by the council and they agree in no case to resort to war until three months after the award of the arbitrators or the report by the council.

In any case under this article the award of the arbitrators shall be made within a reasonable time, and the report of the council shall be made within six months after the submission of the dispute.

(Virtually unchanged, except that some provisions of the original are eliminated for inclusion in other articles.)

## ARTICLE XIII

The members of the League agree that whenever any dispute shall arise between them which they recognize to be suitable for submission to arbitration and which cannot be satisfactorily settled by diplomacy, they will submit the whole subject matter to arbitration. Disputes as to the interpretation of a treaty, as to any question of international law, as to the existence of any fact which, if established, would constitute a breach of any international obligation or as to the extent and nature of the reparation to be made for any such breach, are declared to be among those which are generally suitable for submission to arbitration. For the consideration of any such dispute the Court of Arbitration

to which the case is referred shall be the court agreed upon by the parties to the dispute or stipulated in any convention existing between them.

The members of the League agree that they will carry out in full good faith any award that may be rendered and that they will not resort to war against a member of the League which complies therewith. In the event of any failure to carry out such an award the council shall propose what steps should be taken to give effect thereto.

(Only minor changes in language.)

## ARTICLE XIV

The council shall formulate and submit to the members of the League for adoption plans for the establishment of a permanent court of international justice. The court shall be competent to hear and determine any dispute of an international character which the parties thereto submit to it. The court may also give an advisory opinion upon any dispute or question referred to it by the council or by the assembly.

(Unchanged except for the addition of the last sentence.)

## ARTICLE XV

If there should arise between members of the League any dispute likely to lead to a rupture which is not submitted to arbitration as above, the members of the League agree that they will submit the matter to the council. Any party to the dispute may effect such submission by giving notice of the existence of the dispute to the secretary general, who will make all necessary arrangements for a full investigation and consideration thereof. For this purpose the parties to the dispute will communicate to the secretary general, as promptly as possible, statements of their case, all the relevant facts and papers; the council may forthwith direct the publication thereof.

The council shall endeavor to effect a settlement of any dispute, and if such efforts are successful, a statement shall be made public giving such facts and explanations regarding the dispute, terms of settlement thereof, as the council may deem appropriate.

If the dispute is not thus settled the council either unanimously or by a majority vote shall make and publish a report containing a statement of the facts of the dispute and the recommendations which are deemed just and proper in regard thereto.

Any member of the League represented on the council may make public a statement of the facts of the dispute and of its conclusions regarding the same.

If a report by the council is unanimously agreed to by the members thereof other than the representatives of one or more of the parties to the dispute, the members of the League agree that they will not go to war with any party to the dispute which complies with the recommendations of the report.

If the council fails to reach a report which is unanimously agreed to by the members thereof, other than the representatives of one or more of the parties to the dispute, the members of the League reserve to themselves the right to take such action as they shall consider necessary for the maintenance of right and justice.

If the dispute between the parties is claimed by one of them, and is found by the council to arise out of a matter which, by international law, is solely within the domestic jurisdiction of that party, the council shall so report, and shall make no recommendation as to its settlement.

The council may, in any case under this article, refer the dispute to the assembly. The dispute shall be so referred at the request of either party to the dispute provided that such request be made within fourteen days after the submission of the dispute to the council.

In any case referred to the assembly all the provisions of this article and of Article XII relating to the action and powers of the council shall apply to the action and powers of the assembly, provided that a report made by the assembly, if concurred in by the representatives of those members of the League represented on the council and of a majority of the other members of the League, exchange in each case of the representatives of the parties to the dispute, shall have the same force as a report of the council concurred in by all the members thereof

other than the representatives of one or more of the parties to the dispute.

(The paragraph specifically excluding matters of "domestic jurisdiction" from action by the council is new. In the last sentence, the words "if concurred in by the representatives of those members of the League represented on the council," etc., have been added.)

## ARTICLE XVI

Should any member of the League resort to war in disregard of its Covenants under Articles XII, XIII or XV, it shall *ipso facto* be deemed to have committed an act of war against all other members of the League, which hereby undertakes immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the Covenant-breaking state and the prevention of all financial, commercial or personal intercourse between the nationals of the Covenant-breaking state and the nationals of any other state, whether a member of the League or not.

It shall be the duty of the council in such case to recommend to the several governments concerned what effective military or naval forces the members of the League shall severally contribute to the armaments of forces to be used to protect the Covenants of the League.

The members of the League agree, further, that they will mutually support one another in the financial and economic measures which are taken under this article, in order to minimize the loss and inconvenience resulting from the above measures, and that they will mutually support one another in resisting any special measures aimed at one of their number by the Covenant-breaking state, and that they will take the necessary steps to afford passage thru their territory to the forces of any of the members of the League which are coöperating to protect the Covenants of the League.

Any member of the League which has violated any Covenant of the League may be declared to be no longer a member of the League by a vote of the council, concurred in by the representatives of all the members of the League represented thereon.

(Unchanged except for the addition of the last sentence.)

## ARTICLE XVII

In the event of a dispute between a member of the League and a state which is not a member of the League, or between states not members of the League, the state or states not members of the League shall be invited to accept the obligations of membership in the League for the purposes of such dispute, upon such conditions as the council may deem just. If such invitation is accepted, the provisions of Articles XII to XVI inclusive shall be applied with such modifications as may be deemed necessary by the council.

Upon such invitation being given, the council shall immediately institute an inquiry into the circumstances of the dispute and recommend such action as may seem best and most effectual in the circumstances.

If a state so invited shall refuse to accept the obligations of membership in the League for the purposes of such dispute, and shall resort to war against a member of the League, the provisions of Article XVI shall be applicable as against the state taking such action.

If both parties to the dispute, when so invited, refuse to accept the obligations of membership in the League for the purposes of such dispute, the council may take such measures and make such recommendations as will prevent hostilities and will result in the settlement of the dispute.

(Virtually unchanged.)

## ARTICLE XVIII

Every convention or international engagement entered into henceforward by any member of the League forthwith shall be registered with the secretariat and shall, as soon as possible, be published by it. No such treaty or international engagement shall be binding until so registered.

(Same as original Article XXIII.)

## ARTICLE XIX

The assembly may from time to time advise the reconsideration by members of the League of treaties which have become inapplicable, and the consideration of international conditions whose continuance might endanger the peace of the world.

(Virtually the same as original Article XXIV.)

## ARTICLE XX

The members of the League severally agree that this Covenant is accepted as abrogating all obligations or understandings *inter se* which are inconsistent with the terms thereof, and solemnly undertake that they will not hereafter enter into any engagements inconsistent with the terms thereof.

In case members of the League shall, before becoming a member of the League, have undertaken any obligations inconsistent with the terms of this Cove- [Continued on page 221]

# LABOR GOES TO COLLEGE

BY WILLIAM LEAVITT STODDARD

*Mr. Stoddard is an instructor in the new Labor College at Boston. "I have never seen more earnest and conscientious attention to business in any classroom" is his comment on the students of his course on shop committees and collective bargaining*

signed for high school girls and boys and working as hard with their brains as they have been working with their hands (and brains, too) during the daytime hours. Old men and youngsters; women and girls; black, white and yellow—they are going to college. In one of the smaller classes there are Irish, Canadians, Americans, Negroes, Chinese and Italians in varying proportions. Classified by trades instead of by races, they are stenographers, stablemen, typesetters, telephone operators, machinists, and carpenters. All kinds and conditions of workers are going to the Labor College.

The Trade Union College of Boston, temporary quarters in the High School of Practical Arts, Roxbury section, is now nearly thru its first trial term. Why it was started may be understood from the statement of a labor leader who took the floor during the debate at the Central Labor Union when that body listened to a report from a committee appointed to study the advisability of establishing a labor institution of learning.

"There isn't a laboring man but wants education," he declared—in more or less these words. "We all of us had to work pretty young, most of us before we finished our schooling at the public schools. We couldn't go to college because it cost too much. The great state of Massachusetts does not provide free college education. It ought to, and organized labor has always been in favor of a state university. There doesn't seem to be much chance of getting one, and so it seems about time to start a university of our own. Let's show the state of Massachusetts that labor is willing to sacrifice for its own education, and perhaps they will believe us

when we say that labor wants education and is bound to have it."

This speech was not cheered—it wasn't that kind of a speech. It was greeted with generous grunts of approval and cries of "Question, question!" The question was put and carried.

Pending more elaborate financial arrangements, some labor man's union-made hat was passed, and something like seventy-five dollars was collected to pay the printing bills, clerk hire, and such like for the first week or so. The committee was told to go ahead and run the college.

YOU can understand the spirit and purpose of this new place of learning if you realize who are the men who sit on the joint committee in control. There are sixteen of them, eleven representing unions affiliated with the C. L. U., and five representing the faculty or teaching body. The chairman is a fighting labor union man by the name of Michael A. Murphy. His organization is the Stablemen's Union. The secretary is Mabel Gillespie, of the Stenographers' Union, a woman well known in Women's Trade Union League circles. The treasurer is John J. O'Hare, of the Newspaper Web Pressmen's Union. The other labor bodies represented are the Cigar Factory Strippers' Union, the Theatrical Stage Employees' Union, the Horseshoers' Union, the Milk Wagon Drivers' Union, the Hoisting and Portable Engineers Union, the Teamsters' Union, the Painters' Union, and the Stone Cutters' Union. Not all the trades, nor all the skilled trades, it will be perceived, but a typical sampling, indicating the range of interests involved. For the instructors, there is Henry W. L. Dana, a grandson of the poet Longfellow, formerly assistant professor of comparative literature at Columbia. There is Charles C. Ramsay, a Boston lawyer who was once superintendent of schools at White Plains. There is George Nasmyth, one time lecturer on political economy at Cornell, and now secretary of the League of Free Nations Society. There is R. F. Alfred Hoernle, assistant professor of philosophy at Harvard. And there is the author of this story.

Never was a college started in quite this way nor operated by a board of directors quite so democratically composed. Representation of teachers on the board of control is a cardinal principle.

When the faculty was selected and the college organized, it naturally became impor- [Continued on page 219]

LABOR is going to college in Boston.

Perhaps the world is prone to think that everybody goes to college in Boston and that the Beacon Hill hodcarrier speaks as perfect English and handles a Latin quotation as well as does the native of the Back Bay region. But until recently very few of the members of labor unions have had that advantage.

Now labor is not only going to college, but labor has established its own college to go to. Every weekday evening from 8 till 10, workingmen and working women are squeezing themselves into chairs and behind desks de-

# CHANDLER SIX \$1795

*Famous For Its Marvelous Motor*

## THE SEASON'S MOST BEAUTIFUL BIG CAR OFFERING

**T**HE new Chandler touring car is the high note of the year in beauty of line, in bigness, in the comfort of its cushioning, in the nicety of its custom-like workmanship and in its lustrous finish. Its high hood and radiator, its broad cowl, its wide and deep doors give it distinctive style.

Nothing has been cut out to permit the delivery of this fine big

touring car at the Chandler price. Indeed, much has been added. The back curtain window is beveled plate glass. The clear-vision side curtains fit snugly and open with the doors. There are detachable rear quarter-bow curtains. There are outside door handles. The deep cushions are upholstered in heavy, genuine, hand-buffed leather, in the bright finish.

Carrying this handsome Body is the Famous Chandler Chassis

The Chandler continues for 1919 all its distinguished mechanical features with many minor refinements and improvements. The famous

Chandler motor and the sturdy excellence of the whole chassis make the Chandler notable among fine cars.

# WHAT JAPAN REALLY WANTS

BY SIDNEY L. GULICK

**F**EW features of the Paris Peace Conference are more ominous for the future than the persistent misunderstanding and misrepresentation of Japan. Her unremitting efforts to secure some clause in the Covenant recognizing the principle of "equality of race treatment" has been the occasion of continuous misreports from Paris and of numberless insulting editorials from all parts of America.

American reporters and editors apparently find it impossible to understand what Japan is really after. When Japan says "equality of race treatment" they read "free immigration." They seem incapable of distinguishing between the two. They think  $a=b$  whereas in fact  $a$  is not equal to  $b$ . They cannot imagine how there can be "equal race treatment" without resulting in freedom of immigration. It is no doubt a matter of mental obtuseness rather than of moral obliquity, but the result is equally disastrous. For all Japan is becoming indignant and exasperated. Japan's leaders see clearly that a League of Nations that starts off with the rejection of the principle of equal race treatment, and in which the white race is a largely preponderant majority has not much chance of establishing permanent world peace thru world justice.

Already Japanese editors are asking if this League is a league of white nations to establish white race world domination, to the humiliation and for the exploitation of the other races.

If that is the case, the world is headed for another tragedy, the extent and terribleness of which no one can forecast.

I have read scores of editorials in American newspapers since Japan advanced at Paris her proposal for "equal treatment of races." Various members of Congress have been quoted widely. Every Congressman who has spoken, and every editorial save two, has displayed confusion of means with ends. The *end* is disputed by none—namely, that Asiatic labor shall be kept out of the United States. There is before the country no proposal to admit it. Japan has explicitly stated that she does not ask it. Baron Makino at Paris has affirmed in detail that free immigration would be no more desired by Japan than by America. Ambassador Ishii has been no less explicit.

But still the confusion continues. It threatens the peace of the world, the morale of the League of Nations. It hurts America's prestige thru-out Eastern Asia. It reflects on America's political intelligence most sadly. What are the facts?

*Dr. Gulick is one of the few Americans who can speak with authority of Japan's viewpoint. He has been in Japan twenty five years as a missionary and as a lecturer in the Imperial University of Kyoto and he is secretary for the Federal Council of Churches of its Committee on Relations with the Orient*

They are in brief as follows:

The United States forbids immigration from India and China. Legislation still existing in support of this prohibition is a violation of America's treaty with China, according to our own Supreme Court's decision in 1888.

We refuse naturalization to the Chinese and Japanese.

Our discriminatory state laws are of less importance in the present crisis.

Japan proposed the "Gentlemen's Agreement," promising to stop labor immigration from Japan, in order to avoid being placed in China's position—namely, the position of being excluded by statute and of being the object of much special humiliating legislation and treatment.

These, then, are the *means* by which the agreed-on *object* of holding down Asiatic immigration is attained. While Asia concurs in the object, she strenuously protests against the means.

Are these offensive methods necessary? Absolutely not.

There is before America today a proposal which meets every official contention, and every reasonable unofficial contention, of Asiatic countries, while yet it would, if adopted, reduce immediately the immigration from Asia and would permanently keep it at a low figure. It would give perfect equality of treatment and at the same time secure rigid restriction of immigration.

This same proposal would so regulate immigration from Europe that newcomers from Europe would be admitted in accordance with their proved assimilability.

The National Committee for Constructive Immigration Legislation is

responsible for this proposal, whose details are as follows:

Labor immigration would be prohibited for two years, and thereafter, at the discretion of an immigration commission to be created, for another year or two years. This item of the proposed legislation is an insurance measure against the vast flood of immigrant labor which will otherwise pour thru our gates when transportation is made available. Such an influx of millions from Europe would beat down the wage standard, increase unemployment, and conduce toward nation-wide upheavals, political and industrial.

After the prohibition period, the basis for admitting immigrants would be as follows, applying to all peoples without exception (including India, China and Japan):

A basic figure would be established using the 1920 census. This basic figure would consist of (a) the number of naturalized immigrants from a given country or people, plus (b) the American-born children of immigrants from that race or people.

Each year, the permissible immigration from that country or people would be a percentage (from 3 to 10 or from 5 to 15 per cent) of this basic figure. The proposed immigration commission would vary the percentage within these limits, taking into consideration labor and other conditions.

By the same plan naturalization would be offered to all who could qualify, regardless of race. The standards of naturalization would be raised and a number of important reforms in detail would be included.

The effect? Japanese immigration would be reduced at once to about half the present annual figure. It would increase slowly, but in 1935 it would still be 40 per cent below the Japanese immigration of 1917.

Chinese immigration would be held where it now is—about 1900 a year.

Italian immigration would be reduced about 65 per cent below the average annual immigration from Italy in pre-war years.

From Eastern Europe an even smaller proportion could come.

From Northwest Europe a number would be admissible largely in excess of the pre-war immigration from Northwest Europe.

The sociological consideration in favor of this percentage plan can be stated in a word. Immigrants are assimilated largely thru the influence of (a) previous immigrants who have become Americanized and (b) the children of the first generation, who have grown up thru our public schools. Where these influences prevail, they testify to the assimilability of the new

immigrants from that same people, and they provide the conditions which will enable them to assimilate rapidly.

To return now to the Asiatic quandary. The League of Nations cannot settle our immigration questions, tho our wrong handling of Asiatic immigration can gravely embarrass the League of Nations.

Against military war the League of Nations may ensure us—if it be made an efficient instrument thru the whole-hearted coöperation of great nations like our own. But the League cannot insure against resentment or against trade boycott among the Asian peoples. Japan is speaking equally for China in her appeal for a decent equality of race treatment by which each nation controls its own immigration policies. It may therefore be taken for granted that Japan, in her commercial rivalry with America, will make effective use among the Chinese of the continuing humiliation practised against Asiatics by this country—a humiliation which can only appear to Asiatics as a thing wilful, wanton, unnecessary. And wanton it is, and indefensible, save as ignorance may justify wantonness.

By adopting, however, the policy here sketched America can solve the problem at once and create a new era in her good relations with the Orient, at the same time putting order into the present chaos of her general immigration and naturalization laws. For this policy gives to Japan what she craves, equality of race treatment, and also secures what all Americans insist on and Japan herself recognizes as just—safety from danger of Asiatic immigration. If only we would think objectively, setting aside the natural emotional disposition to humiliate a foreign race, the forthcoming Congress would surely act on the lines here indicated. It is necessary to secure this support within the constituencies of congressmen. The National Committee for Constructive Immigration Legislation is prepared to help in organizing such support, and invites all American citizens to become members of the movement.

New York

## LABOR GOES TO COLLEGE

(Continued from page 216)

tant to find a building in which to hold its classes. At this point the Central Labor Union drove home an argument. "If the public won't furnish us with free college education," they said, "we can at least borrow public room in a school building."

A college ought to begin modestly, anyway, and the Trade Union College is running true to form. It began on April 7 in various rooms loaned to it thru the Boston School Board in the very handsome High School of Practical Arts. This spring the student body, distributed thruout the six week days, does not make much of a dent in the nightly program of the janitor. But next fall, when the first real term begins, it may be necessary to commandeer the whole big yellow brick schoolhouse.

Some irreverent local headliner here in Boston wrote across the top of a column description of the new labor college "Ten Nights in a Schoolroom." For, owing to the lateness of the educational season, it was decided that the first spring term of the institution should consist of short courses, ten lectures or lessons to a course. While the C. L. U. was pretty well convinced that the rank and file of the Boston labor movement wanted a college, every one realized that you cannot start a college full blown in two weeks. The authorization to establish the college was given on March 16. Allowing the very brief period of three weeks for making all preliminary arrange-

# Film On Teeth Proves Your Way Wrong

*All Statements Approved by High Dental Authorities*

## That's the Tooth-Destroyer

Millions know that well-brushed teeth still discolor and decay. Tartar forms on them, pyorrhea starts. The tooth brush has proved itself inadequate. Statistics show that tooth troubles have constantly increased.

Dentists long have known the reason, but not a home way to combat it. The trouble lies in a film—that slimy film which you feel with your tongue. It clings to the teeth, gets into crevices, hardens and stays. And that film causes most tooth troubles.

The film is what discolors, not the teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in

contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea.

One great dental question for years has been, how to combat that film. A dental cleaning removes it, but the great need is to fight it day by day.

Science has now found the way. Able authorities have amply proved it by convincing clinical tests. Leading dentists all over America have proved it and adopted it. Now that method is embodied in a dentifrice called Pepsodent. And we let everybody prove it by a ten-day home test free.

## See What Clean Teeth Mean

Teeth in general, though brushed daily, are not clean. That's why tooth troubles come. Use a 10-Day Tube of Pepsodent and see the difference for yourself. It will be a revelation.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly combat it.

That seems a simple method. But pepsin must be activated, and the usual agent is an acid harmful to the teeth. So pepsin long seemed forbidden. What science now has done is to find a harmless activating method. Five governments have already granted patents. It is that method, used in Pepsodent, which has solved this great tooth problem.

The proof is quick and easy. Within ten days you will gain a new light on teeth cleaning, and that's important both to you and yours.

Send the coupon for a 10-Day Tube. Use like any tooth paste. Note how clean the teeth feel after using. Mark the absence of the slimy film. See how the teeth whiten as the fixed film disappears.

Compare this method with your present method. Look at your teeth in ten days. Then let the evident results tell you what to do. There will be no need for argument.

Cut out the coupon now.

# 3-In-One Oil

## "That Was Certainly a Fine Shave"

That's what you will say if you prepare the blade of your razor in the scientific manner.

Magnified 1000 times the edge of a razor blade (ordinary or safety) looks like a cross-cut saw. Between the microscopic teeth moisture collects and tiny particles of rust form.

It is this indiscernible rust that makes your razor pull and hurt your face. And it is this rust you must prevent. Stropping only breaks off the rust after it is formed. Nor can you wipe a blade dry enough to get all the moisture from between the invisible teeth and prevent rusting.

Therefore, do this: Put a few drops of 3-in-One on the strop occasionally, to keep it soft. Before and after shaving, draw razor blade between thumb and forefinger moistened with 3-in-One. Then rust will positively not be able to form.

Do this and you will be gladly surprised at how smooth a shave can be. Furthermore, you will get more shaves out of a "safety" blade than you ever did before.

3-in-One is sold by all good hardware, sporting goods, drug and general stores. East of the Rocky Mountain States, 15c, 25c and 50c in bottles; also in 25c Handy Oil Cans.

### Free 3-in-One For You

On a postal card simply say: Send me your interesting circular, "A Razor Saver for Every Shaver," and a generous free sample bottle of 3-in-One Oil.

**Three-in-One Oil Company**

407-413 State St., Rochester, N. Y.

Send for free booklet, "The Useful Marshmallow," which gives pleasing Marshmallow recipes.

ments, spreading the news thruout labor Boston, and so on, the best that could be done was to give a ten weeks' term running from early in April to early in June. Each course in the curriculum of some dozen courses comes once a week, for two hours; one hour is lecture, and the other is discussion. None may enter a course unless he is a member of a union affiliated with the American Federation of Labor or a member of the immediate family of a trade unionist. Two dollars and a half is the admission fee per course.

What do labor men want to go to college for, anyway? This is a question commonly heard in the portions of Boston composed of those persons who do not know much about the labor movement. The answer is not difficult. The labor men want to go to college to learn things which will be useful to them and which will give them the feeling that they are not handicapped in life. One of the things which they particularly want to learn is how to read and speak good English. Before the classes in English were actually organized it was evident that they would prove to be the most popular of all that were offered; and so it turned out. Mr. Carleton Noyes, for example, whose teaching is well known to many Harvard men, gives a course called "How to Write English." It is largely attended. Mr. Alfred Sheffield, who has taught many Wellesley girls, has a course in the Labor College on "Practise in Discussion."

The labor men are also interested in law, and there is the course entitled "Introduction to American Law," given every Saturday night by no other than Roscoe Pound, dean of the Harvard Law School. There is a feeling in labor circles that a little knowledge of the law is very useful.

There is one striking difference between the student body of this new labor college and that of many regulation academic classrooms: there is no difficulty in keeping order. One reason is that the average age of the pupils is above that of the ordinary college boy or girl. But another reason, and a more important one, is that here is a group of men and women who are going to college with a very definite purpose. They know what they want and why they want it. They have paid out very hard-earned money for education, and they purpose to get their money's worth. Let me illustrate the kind of attention which every one of us who are teaching is accorded:

In my classroom there is a wash basin equipt with running water. One of the students became thirsty toward the end of the discussion hour and, in the midst of an explanation by the instructor, he rose and let the water run for a drink. The class was thoroly upset. They did not like the interruption. One member apologized to me afterward for his classmate, and the offender was cautioned by a friend—not by the teacher—not to do it again.

In each class there is lecturing, written work, and oral discussion. I have never seen more earnest and conscientious attention to business in any classroom. I have talked steadily for an hour without an interruption and with the keenest attention to every word. In the discussion—informal, of course—which follows the first hour, it is quite apparent that the students have absorbed the salient points and that they have some ideas of their own to put forth. My course happens to be on shop committees and collective bargaining, a topic in which trade unionists are deeply interested because collective bargaining is part and parcel of their creed, and because the shop committee movement is one which is vitally affecting the trade unions. I find that the second hour of each evening is tremendously illuminating, and I feel that I learn more from it than I am able to give. I find

also that the class does its outside reading faithfully and that in addition to reading it does outside thinking—which is more than some teachers in more prosperous institutions of learning can say of their classes!

In addition to the teachers already named, some other able men have signed up with the labor college. Among them I may mention Prof. Irving Fisher, of Yale; Prof. William Z. Ripley, of Harvard; Prof. Felix Frankfurter, of Harvard, and Francis Bowes Sayre, son-in-law of President Wilson. Tho we are but young yet, I think that it may safely be said that the Trade Union College of Boston is fast on the road to realize its stated aim, to wit: "Education must not stifle thought and inquiry, but must awaken the mind to the application of natural laws and to a conception of independence and progress."

Boston

## THE NEW COVENANT

(Continued from page 215)

nant, it shall be the duty of such member to take immediate steps to procure its release from such obligations.

(Virtually the same as original Article XXV.)

### ARTICLE XXI

Nothing in this Covenant shall be deemed to affect the validity of international engagements, such as treaties of arbitration or regional understandings like the Monroe Doctrine, for securing the maintenance of peace.

(Entirely new.)

### ARTICLE XXII

To those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the states which formerly governed them and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, there should be applied the principle that the well being and development of such peoples form a sacred trust of civilization and the securities for the performance of this trust should be embodied in this Covenant.

The best method of giving practicable effect to this principle is that the tutelage of such peoples be intrusted to advanced nations who, by reason of their resources, their experience or their geographical position, can best undertake this responsibility, and who are willing to accept it, and that this tutelage should be exercised by them as mandataries on behalf of the League.

The character of the mandate must differ according to the stage of the development of the people, the geographical situation of the territory, its economic condition and other similar circumstances.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized subject to the rendering of administrative advice and assistance by a mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the mandatory.

Other peoples, especially those of Central Africa, are at such a stage that the mandatory must be responsible for the administration of the territory under conditions which will guarantee freedom of conscience or religion subject only to the maintenance of public order and morals, the prohibition of abuses such as the slave trade, the arms traffic and the liquor traffic and the prevention of the establishment of fortifications or military and naval bases and of military training of the natives for other than police purposes and the defense of territory and will also secure equal opportunities for the trade and commerce of other members of the League.

There are territories, such as Southwest Africa and certain of the South Pacific Islands, which, owing to the sparseness of their population or their small size or their remoteness from the centers of civilization or their geographical contiguity to the territory of the mandatory, and other circumstances, can be best administered under the laws of the mandatory as integral portions of its territory, subject to the safeguards above mentioned, in the interests of the indigenous population. In every case of mandate, the mandatory shall render to the council an annual report in reference to the territory committed to its charge.

The degree of authority, control or administration to be exercised by the mandatory shall, if not previously agreed upon by the members of the League, be explicitly defined in each case by the council.

A permanent commission shall be constituted

# Linen Specials at McCutcheon's

Reg. Trade Mark

**T**WO very interesting shipments of Damask Linen Table Cloths and Napkins have just reached us from bond. These Cloths and Napkins were purchased early in 1918, which makes it possible for us to quote especially attractive prices.

LOT No. 1 is of Scotch full-bleached Linen Damask in our own regular makes and patterns.

**Breakfast Napkins**, \$7.00, 7.50, 8.00, 8.75, 9.50 the dozen and up.

**Dinner Napkins**, \$8.75, 9.00, 10.00, 10.50 the dozen and up.

**Table Cloths**, 2 x 2 yds., \$7.00, 7.25, 8.00, 8.50, 9.50 10.50 each and up.

**Table Cloths**, 2 x 2½ yds., \$8.50, 8.75, 9.50, 10.00, 12.00 each and up.

(Other sizes at proportionate prices.)

LOT No. 2 comprises a good variety of Cream and half-bleached Irish Damask, which we very strongly recommend as being especially suitable for hard use. Nothing could be better for the bungalow and the country home, where moderation in price is desired.

Each washing adds to the appearance of these Linens and tones them to an attractive silver grey. If dried in the sun, these cloths will eventually turn white.

The quantities are limited; therefore we urge our Patrons to make their purchases as promptly as possible.

**Cloths**, \$6.75, 7.75, 8.50, 9.00 and 9.75 each.

**72-inch Piece Goods**, \$4.25 and 4.50 per yard.

**22-inch Napkins**, \$7.75 the dozen.

**MAIL ORDER SERVICE:** Any of the merchandise described above may be ordered with complete satisfaction through our Mail Order Service.

## SCHOOLS AND COLLEGES

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$5 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course was reduced from three years to two years and six months. The cessation of hostilities will not end the need for nurses abroad; they will be needed, in large numbers, for reconstruction work, and for the establishment of schools of nursing in the different countries of Europe for a long time to come. We plan, therefore, to continue the course of two years and six months.

For Information write to MISS AGNES S. WARD, Superintendent

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein.

For many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

150-page illustrated catalogue free. Please address

The Home Correspondence School  
Dept. 304, Springfield, Mass.

ESTABLISHED 1897 INCORPORATED 1904

## Your Vacation Opportunity

The Summer Quarter 1919 will receive the added inspiration of professors and instructors returning from war service in many lands. Students and teachers, interested in keeping abreast of the times or in completing work already begun, appreciate the opportunity of instruction in a regular season of study under members of the University staff. Scholars desiring to prosecute research in the libraries and laboratories will find facilities for work under the most favorable conditions.

Courses are offered in all departments and include undergraduate and graduate instruction in Arts, Literature, Science, Commerce and Administration, Law, Medicine, Education and Divinity.

SUMMER QUARTER 1919

First Term June 16-July 23

Second Term July 24-August 29

Students may register for either term or both

For the complete announcement of courses address  
The University of Chicago, Chicago, Ill.

## NEW-CHURCH THEOLOGICAL SCHOOL

48 Quincy St., Cambridge, Mass.

Established 1866. Three years course. College preparation desired. The curriculum includes systematic study of the theological writings of Emanuel Swedenborg and spiritual interpretation of the Scriptures. Courses by correspondence when desired.

For catalogue and information, address

WILLIAM L. WORCESTER, President

## BISHOP HOPKINS HALL

An endowed school for girls overlooked by Lake Champlain. Well equipped buildings. All outdoor sports. College preparatory and general courses. Write for booklet.

Miss ELLEN SETON OGDEN, Principal.

The Rt. Rev. A. C. A. HALL, President and Chaplain.  
Box R, BURLINGTON, Vt.

## RANDOLPH-MACON WOMAN'S COLLEGE

Offers courses for A.B. and A.M. Four laboratories, library, observatory, gymnasium, swimming pool. Liberal endowment makes possible very moderate charges. Officers and instructors, 60. Students from 31 states and countries. Address

WILLIAM A. WEBB, Pres., Box 46

LYNCHBURG, VIRGINIA

## UNIVERSITY OF COLORADO

BOULDER, COLORADO

ANNOUNCEMENT OF A SUMMER QUARTER

Instead of the usual Summer Session of six weeks the University of Colorado will conduct, in the summer of 1919, a Summer Quarter of two terms, greatly increasing the scope and variety of courses. The First Term will open on June 30 and close on August 2. The Second Term will open on August 4 and close on September 6. Courses will be offered in Liberal Arts, Law, Medicine, Ophthalmology, Engineering, Mountain Field Biology, and Vocational Subjects. A bulletin, soon to be issued, containing descriptions of courses and other information, may be obtained by addressing the Registrar.

## PACIFIC SCHOOL OF RELIGION

An undenominational union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. All privileges of University of California open to qualified seminary students. Term begins August 18, 1919. Address PRESIDENT C. S. NASH, Berkeley, Cal.

## DEAN ACADEMY

FRANKLIN, MASS. 53rd YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$325-\$400 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt.D., Principal

## How to Use The Independent in the Teaching of Civics

By Simon J. Jumnefsky, A.B., LL.B.

Teachers write for it and it will be sent free.

THE INDEPENDENT

119 West 40th Street

New York

to receive and examine the annual reports of the mandataries and to advise the council of all matters relating to the observance of the mandates.

(This is the original Article XIV, virtually unchanged, except for the insertion of the words "and who are willing to accept," in describing nations to be given mandataries.)

## ARTICLE XXIII

Subject to and in accordance with the provisions of international conventions existing or hereafter to be agreed upon, the members of the League (A) will endeavor to secure and maintain fair and humane conditions of labor for men, women and children, both in their own countries and in all countries to which their commercial and industrial relations extend, and for that purpose will establish and maintain the necessary international organizations; (B) undertake to secure just treatment of the native inhabitants of territories under their control; (C) will intrust the League with the general supervision over the execution of agreements with regard to the traffic in women and children, and the traffic in opium and other dangerous drugs; (D) will intrust the League with the general supervision of the trade in arms and ammunition with the countries in which the control of this traffic is necessary in the common interest; (E) will make provision to secure and maintain freedom of communication and of transit and equitable treatment for the commerce of all members of the League; in this connection the special necessities of the regions devastated during the war of 1914-18 shall be in mind; (F) will endeavor to take steps in matters of international concern for the prevention and control of disease.

(This replaces the original Article XX, and embodies parts of the original XVIII and XXI. It eliminates a special provision formerly made for a bureau of labor and adds the clauses B and C.)

## ARTICLE XXIV

There shall be placed under the direction of the League all international bureaus already established by general treaties if the parties to such treaties consent. All such international bureaus and all commissions for the regulation of matters of international interest hereafter constituted shall be placed under the direction of the League.

In all matters of international interest which are regulated by general conventions but which are not placed under the control of international bureaus or commissions, the secretariat of the League shall, subject to the consent of the council, and if desired by the parties, collect and distribute all relevant information and shall render any other assistance which may be necessary or desirable.

The council may include as part of the expenses of the secretariat the expenses of any bureau or commission which is placed under the direction of the League.

(Same as Article XXII in the original, with the matter after the first two sentences added.)

## ARTICLE XXV

The members of the League agree to encourage and promote the establishment and coöperation of duly authorized voluntary national Red Cross organizations having as purposes improvement of health, the prevention of disease and the mitigation of suffering thruout the world.

(Entirely new.)

## ARTICLE XXVI

Amendments to this Covenant will take effect when ratified by the members of the League whose representatives compose the council and by a majority of the members of the League whose representatives compose the assembly.

No such amendment shall bind any member of the League which signifies its dissent therefrom, but in that case it shall cease to be a member of the League.

(Same as the original, except that a majority of the League, instead of three-fourths, is required for ratification of amendments, with the last sentence added.)

## ANNEX TO THE COVENANT

1.—Original members of the League of Nations, signatories of the Treaty of Peace:

United States of America, Belgium, Bolivia, Brazil, British Empire, Canada, Australia, South Africa, New Zealand, India, China, Cuba, Czechoslovakia, Ecuador, France, Greece, Guatemala, Hayti, Hedjaz, Honduras, Italy, Japan, Liberia, Nicaragua, Panama, Peru, Poland, Portugal, Rumania, Servia, Siam and Uruguay.

States invited to accede to the Covenant: Argentine Republic, Chile, Colombia, Denmark, Netherlands, Norway, Paraguay, Persia, Salvador, Spain, Sweden, Switzerland and Venezuela.

2.—First Secretary General of the League of Nations (blank).

(The annex was not published with the original draft of the covenant.)

# 7 Things That Cut My Working Day in Half

This Man Now Observes "Banker's Hours," Yet Gets More Done Than When He Worked Early-and-Late—and Is Making More Money. The "How" of It Is Surprisingly Easy.

SOME of my friends jokingly accuse me of having made a sudden killing in Wall Street. Others insinuate that some rich relative must have left me all his money. All wonder at my "banker's hours." All seem to think I have recently fallen into a "soft snap."

When people who don't know the facts compare my present style of living with the way my family and I lived in less prosperous days, and when they compare the leisure I now enjoy with the way I used to slave, I suppose it is natural for them to jump to conclusions and attribute the change to some stroke of luck. However, the only luck about it was in getting hold of the formula that has brought me quick success.

\*\*\*\*

My days used to be a regular chaos, from the time I got up till I went to bed. Always under pressure, always in a feverish rush, yet always behind.

To begin with, I was behind with my sleep. Invariably set the alarm for the last minute of safety, and invariably woke up tired. Rushed through my breakfast. Hurried for the 7:40 train. My nose to the grindstone all day long, but never quite caught up. Desk nearly always in a chronic mess with an accumulation of things that should have been attended to a week or more before. Getting away from the office before 6:00 seemed like taking a half-holiday; and frequently much later than that, and often had to take work home.

\*My family complained that my mind always seemed to be at the office. I know I was poor company. I was losing all my social popularity. I couldn't enter into the spirit of things because I was always either fagged out or haunted by thoughts of things undone. Even my Sundays were more or less spoiled by guilty thoughts of the accumulation of work always staring me in the face.

And the tragedy of it was that in spite of the way I was making a slave of myself and worrying "my head off," I didn't seem to be getting anywhere. My income had practically reached a standstill. Our firm was growing by leaps and bounds, but I didn't seem to be growing with it. I knew I faced a wonderful opportunity, but somehow I didn't seem able to grasp it. It made me feel like a failure.

But happily there has come a big change. I am still with the same firm—now one of the largest in its field—but have won a place as Vice President. My income has gone up in proportion, has already jumped to five times what it was, and the end nowhere in sight. All this in the space of 12 short months, where

all my previous years of faithful service had never taken me higher than a minor executive position, at a minor executive's salary.

And that is only part of the change. In spite of greatly increased responsibilities, in spite of the multitude of matters that come to me for attention and decision, in spite of the numerous important conferences and interviews which my promotion has added to my schedule, in spite of more exacting demands on me in every way, I have cut my working hours almost in two. I am no longer chained to my desk. And I have thrown off the old nervous strain that used to make my days almost a night-mare.

I now have time for an extra hour's sleep in the morning. Time for a leisurely toilet and breakfast instead of the old Hurry-and-Run. Reach my desk about ten. Usually ready to leave by three or a little after—frequently earlier. And when I leave, it is with a clear conscience—am always right up to the minute on my schedule; often a little ahead.

What is the explanation? Merely this—a simple secret that I got from a man named Purinton; all there is to it are 7 easy rules—but the results they bring are amazing.

Sheer idleness isn't by any means the only way to squander time and waste chances for success. Through Purinton's simple set of rules, I have learned

the real secret of how to turn time into money—how to make every minute count, not only at my desk, but also away from it. Not by being a miser with my time, but by spending it more intelligently. As I have already said, I allow myself more leisure and recreation than ever before in my life—but I have learned how to make my hours of "play" contribute to my hours of work—how to make them add to my fitness so I am always at my best while at my desk. That is one reason why I have been able to cut my working hours in two. But a bigger reason is that by following the simple rules laid down by this man Purinton, I have learned how to go through a pile of work like a mowing machine through grass. I have learned how to eliminate all "lost motion" and waste effort—not merely how to make every minute of my working time count, but also how to make every thought, every effort, every ounce of energy count. In short, Purinton has shown me how to do more in one hour than I used to do in three. And I do it with far less strain on my nerves and energy. I am fresher now at the end of my day's work than I used to be at the beginning.

\*\*\*\*\*

Who is this man Purinton? And just what are his 7 easy rules? I will tell you. In my estimation, Edward Earl Purinton is without question the sanest and soundest "achievement doctor" in America. His advice on the practical side of life has been sought by thousands and followed to their profit—from corporation heads down to the humblest worker in the ranks. His whole career is a living exemplification of "practising what he preaches"; he has made his own success by following his own rules. His developed a marvelous capacity for getting things done, his associates say he can do three men's work. He accomplishes more that is worth while every year than most men accomplish in a lifetime.

"Allow myself more leisure and recreation than ever before in my life. . . ."

And now for his 7 wonder-working sets of rules. They are all briefly set forth in Mr. Purinton's 7 short lessons in Self Analysis, Time Saving and Personal Achievement—7 absorbingly interesting lessons that can easily be mastered in 7 evenings of leisure-hour study. In fact, just one evening's study can alone easily add 10% to 25% to any man's or woman's capacity for getting things done.

There you have it. In these 7 delightful lessons, you will find the simple formula which has brought about the great change in my fortune. It is a secret that is available to all. Anyone anywhere can easily put these lessons to a see-for-themselves test, just as I did, simply by taking advantage of the Publisher's liberal offer to send them on approval for 5 days' free examination. You don't have to risk a cent—don't have to pay a penny until you see the lessons, and then only if satisfied. If for any reason you don't find them as helpful as you expect, simply return them and they will cost you nothing whatever. While if you want to

keep them, a \$5 bill is all you have to pay for the entire 7 lessons—only \$5 for guidance that can easily be worth thousands of dollars to any ambitious man or woman.

\*\*\*\*\*

This man isn't by any means the only one. Thousands of get-ahead men and women in every state of the union and in foreign countries as well—all the way from ambitious clerks and stenographers to high executives—have profited from Mr. Purinton's 7 easy lessons. Our files contain hundreds of letters from such people telling of remarkable results. Why not take advantage of our offer to send these lessons on approval for 5 days' free examination, and see for yourself? You take no risk—not a penny to pay until you examine the lessons, and then only if you want to keep them.

You have everything to gain and nothing whatever to lose. Send no money—merely mail the coupon or ask for the lessons on a postcard or in a letter.

## Independent Corporation

(Publishers of Independent Weekly)

# THE NEW BOOKS

## POETRY AND ABOUT IT

BY EDWIN E. SLOSSON

**T**HERE really must be a poetic revival since both those who like it and those who do not like it persist in talking about it. Those opposing points of view are represented by two volumes of criticism just published; one by Louis Untermeyer, who favors the new movement and is in it, the other by Professor Lowes, of Harvard, who looks upon it with skepticism tho not with discouragement. Since the affirmative always has first right to the floor in a debate let us see what Mr. Untermeyer has to say of *The New Era in American Poetry*:

Poetry, to the living lover of it, is today less a narcotic and more a nourishment. He struggles after it with a nervous energy. In his vigorous skepticism and all-absorbing interest, one can see how sweeping the change has actually been. The transformation in America has taken on the quality of a quiet revolution—a revolt against mere pleasantries and prettiness. Even before the war, our modern skald did not feel it his duty to face life with a sweet smile of easy optimism; today the voice of the chronically pleasant poet sounds doubly pitiful. In his liberation from moldy conventions and stale sentimentality, the artist has achieved a clarity of vision that is as fresh as it is intellectually frank. The past, glorious in accomplishment and eternally enshrined, is not necessarily the altar for the future; and our day has seen the artist in every sphere rise from his idolatrous worship and look with cleared eyes at old and breathless mysteries.

Glance also at the various racial colors of the names themselves: Frost, Oppenheim, Lindsay, Masters, Sandburg, Lowell, Giovannitti, Robinson, Neihardt, Benet, Pound, Kreymborg, Endicoff, Eastman, Tietjens. What a medley of clans and nationalities! America is truly a melting pot in a poetic as well as an ethnic sense. For out of this many-voiced and differently-pitched choir is rising a harmonic music, a homogeneity in spite of its seemingly confused counterpoint. Our poetry, leading our literature, has become polyglot and universal and, like art and science, is fast becoming first national and then international. The war, possibly the last great struggle of nationalism, has helped to weld these scattered, cosmopolitan elements in a loose but sturdy Americanism and thus ("for the best of America," to repeat Whitman, "is the best cosmopolitanism") has given all our work a wider and even an international significance.

Of the authors whom Mr. Untermeyer con-

siders in this volume as participating in poetic renaissance, readers of *The Independent* have had the opportunity thru its pages to become acquainted with the work of Robert Frost, Vachel Lindsay, Edgar Lee Masters, Amy Lowell, Arturo Giovannitti, J. G. Neihardt, William Rose Benet, Max Eastman, Sara Teasdale, Margaret Widdemer, Willard Wattles, Lola Ridge, Alter Brody, Harry Kemp, Helen Hoyt, A. A. Coates, C. W. Stork, Clement Wood, Christopher Morley, John Crowe Ransom, Conrad Aiken, John Masefield, Edwin Markham, Cale Young Rice, Percy MacKaye, Mary Carolyn Davies, Adelaide Crapsey.

And altho the author modestly omits himself from his collection our readers will remember his article on "Amy Lowell—Storm Center" in *The Independent* of August 28, 1916, as well as various poems in earlier issues. But since the name of Carl Sandburg does not appear on the list of our contributors we remedy the omission by quoting from his new volume, "Cornhuskers":

### PRAYERS OF STEEL

Lay me on an anvil, O God.  
Beat me and hammer me into a crowbar.  
Let me pry loose old walls.  
Let me lift and loosen old foundations.

Lay me on an anvil, O God.  
Beat me and hammer me into a steel spike.  
Drive me into the girders that hold a skyscraper together.

Take red-hot rivets and fasten me into the central girders.

Let me be the great nail holding a skyscraper thru blue nights into white stars.

Mr. Untermeyer is catholic but not uncritical. He does not praise a thing

simply because it seems new and he does not accept every fledgling poet at his own valuation.

On the other hand Professor Lowes, altho he views the movement from the conservative standpoint, is openminded and hopeful. In his new volume, *Convention and Revolt in Poetry*, he starts from Chaucer but he does not end there. He gives candid consideration to the new claimants for admission to the "antient and honourable companie" of authorized authors and points just wherein they fall short and why. But he is glad they are doing something even tho what they are doing is not quite the right thing:

Far more significant than the faults of the movement, or even than its merits, is the fact that it *exists*. At no time, perhaps, in the history of this country at least, has there been so keen and widespread an interest in poetry. We may carp at the form that it takes, we may poke fun at its vagaries, we may leave it, if we please, unread. The fact remains that more people are reading poetry today than for a period of many years. That in itself is of happy omen. You can't steer a boat that isn't moving. Once let it gather headway, and the rudder will do its part. The new preoccupation with poetry in this country is a fact of large significance—not so much for what the poetry itself now is, as for what it promises. . . . If the new poets can bring themselves to moderate their attitude of somewhat sensitive resentment toward those who call their art in question; if the critics, on their part, can forego their not infrequent tone of irritating condescension, and welcome, with no surrender of discrimination, a fresh impulse—if this fraternity of interests can be brought from Utopia back to Earth, then we may look with some assurance for a genuine poetic Renaissance.

Nor need we vex our souls particularly over the vagaries of the voyagers. The inevitable extremes are merely insurgency's alms for oblivion. The essential point is that a residuum persists; a new inch of the strange has been made familiar; and the frontiers of art have been so far advanced. And when the Kandinskys and Stravinskys, the Pincassos and the Matisses, futurism and cubism, and all the other isms that make the recent history of art read like a series of bulletins from revolutionary Russia when these have enjoyed their nine days' wonder, and been gathered to their fathers, the technique of art is usually found to have gained a little in finesse and

Robert Frost, author of "North of Boston," sitting at his work desk

flexibility, and our recognition of beauty to have been appreciably widened in its scope. For after the pioneers there follow others, when the strange has become no longer strange, who transmute what the adventurers have brought within the circle into something that is enduringly old and new in one. And in the fact that it makes this ultimate transformation possible lies one of the outstanding glories of revolt.

The insurgent temper, accordingly, supplements, even while it apparently contravenes, the spirit that busies itself creatively with forms and themes that have been handed down.

Professor Cunliffe, of the Columbia School of Journalism, is one of the few professors of English who keep an eye open for new authors and he is one of the fewer who can appraise them critically and write about them interestingly. His volume on *English Literature During the Last Half Century* is composed of essays contributed to the new edition of the "Warner Library of the World's Best Literature," and contains sketches of Meredith, Hardy, Butler, Stevenson, Gissing, Shaw, Kipling, Conrad, Wells, Galsworthy and Bennett, supplemented by chapters on "The Irish Movement," "The New Novelists" and "The New Poets." In the last it is interesting to observe that the Georgians whom he picks out "as seem to have poetical sinews in them and to have done work likely to endure" are John Masfield, Rupert Brooke, Wilfrid Wilson Gibson, W. H. Davies, W. J. de la Mare and Lascelles Abercrombie. The Independent claims the honor of having published more of Gibson's verse than any other American periodical.

Masfield has long past the period of question whether he is a real poet or not. That he has become a fixed star of the galaxy is shown by the appearance of his collected and complete poems and plays. The volume of his poems contains 520 pages mostly written between 1911 and 1914. He, like Gibson, sticks to rime. In fact he is particularly fond of double rimes. It was his long narrative poems, "The Widow of Bye Street" and "Dauber," that gave him his reputation, but some of earlier salt water verses are quite as remarkable, especially those in which he utilizes the material gathered in his buccaneer book, "On the Spanish Main." He handles precious stones as lovingly as Browning in "St. Praxed's Church":

The moon came white and ghostly as we laid the treasure down.  
There was gear there'd make a beggarman as rich as Lima Town,  
Copper charms and silver trinkets from the chests of Spanish crews;  
Gold doubloons and double moldores, louis d'ors and portagues,  
Clumsy yellow metal earrings from the Indians of Brazil,  
Uncut emeralds out of Rio, bezoar stones from Guayaquil;  
Silver in the crude and fashioned, pots of old Arica bronze,  
Jewels from the bones of Incas desecrated by the Dons.

And in these stanzas Masfield can condense the whole history of navigation under oars, sails and steam:

CARGOES

Quinquere of Nineveh from distant Ophir,  
Rowing home to haven in sunny Palestine.

Amy Lowell is one of the leaders of the new poets

With a cargo of ivory,  
And apes and peacocks,  
Sandalwood, cedarwood, and sweet white  
wine.

Stately Spanish galleon coming from the  
Isthmus,  
Dipping thru the Tropics by the palm-  
green shores,  
With a cargo of diamonds,  
Emeralds, amethysts,  
Topazes, and cinnamon, and gold moidores.  
Dirty British coaster with a salt-caked  
smoke stack,  
Butting thru the Channel in the mad  
March days,  
With a cargo of Tyne coal,  
Roads-rails, pig-lead,  
Firewood, iron-ware, and cheap tin trays.

Unaffected by these latter-day experi-  
ments in free verse and theories of  
imagism, vorticism, futurism and the  
like, Rudyard Kipling goes on the same  
old way writing verse to tunes of his  
own invention. The poems he has writ-  
ten since the publication "The Five  
Nations" he has now brought together  
in a collection entitled *The Years Be-  
tween*. The poems are mostly dated, tho  
they need not have been, for they are  
dated internally. They were written for  
a particular purpose and therefore at  
a particular time which can generally  
be discerned as readily as the date of a  
stray scrap of newspaper. For Kipling  
is a journalistic poet. He believes in  
striking while the iron is hot that he  
may shape it. This has the inevitable  
disadvantage that when the iron gets  
cold it gives forth an empty or discor-  
dant clang. For instance those venem-  
ous verses on the suffragets, "the fe-  
male of the species is more deadly than  
the male," dated 1911, was received  
with shrill applause by the ladies who  
did not wish to soil their hands with the  
ballot but it sounds funny since both  
pro and anti militants have found op-  
portunity in the war to exercise their  
unpleasant talents and are now quite  
calmly casting votes in the same ballot

box. So, too, it is some-  
what shocking now to  
read his extravagant  
eulogies of the Ulster  
Covenanters when in  
1914 they were arming  
with German rifles to  
fight the King and Par-  
liament at the moment  
when the German at-  
tack was launched. His  
animosity toward  
America, arising from  
some unfortunate per-  
sonal experiences dur-  
ing his residence here,  
found frankest expres-  
sion during the war  
and he classes "the  
swithering neutrals"  
along with the Pope  
and the Socialists, "the  
Kaiser and his Gott" as  
the minions of Apoll-  
yon. His bitterness  
against the Pope again  
is displayed in a poem  
on how the cock crew  
when Peter denied his  
Lord a second time in  
Picardy and Flanders.

But tho some of his versiform vitu-  
peration sounds already old we are still  
near enough to the passions of the war  
to appreciate more than we did at the  
time it was written, 1902, his denuncia-  
tion of England for joining with  
Germany in a naval demonstration  
against Venezuela. Its closing line has  
become a slogan of the war:

In sight of peace—from the Narrow Seas  
O'er half the world to run—  
With a cheated crew, to league anew  
With the Goth and the shameless Hun.

Of course Kipling does not find it  
necessary to mention that it was the  
American navy that blocked the Ger-  
man game on that occasion.

But journalistic poetry—which means  
poetry of the day, the *jour*—tho it gets  
out of date quickly sometimes gets into  
date again thru the revolution of the  
earth. For instance, there was a period  
during the decade, 1907-17, while Eng-  
land and Russia were friends or at  
least allies, when it was impolite to  
quote his verses about "the bear that  
walks like a man." But now they are  
again in favor for they fit our feeling  
toward the Bolsheviki as tho they were  
written today. It is this quality of re-  
current appositeness that has been used  
by the author of that remarkable essay  
in the *Atlantic* on "The Remarkable  
Rightness of Rudyard Kipling." She  
also has struck while the iron is hot.

But there is one poem at least that  
unfortunately is not out of date nor  
likely to be soon for all the good plans  
of the Labor Commission of the Paris  
Conference. This is "The Sons of  
Martha," one of Kipling's finest.

When this poem first came out Dr.  
Ward, then Editor of *The Independent*,  
made it the subject of one of his ringing  
leaders and quoted the stanzas that we  
here reprint from *The Independent* of  
May 23, 1907:

The sons of Mary seldom bother, for they  
have inherited that good part;

But the sons of Martha favor their mother  
of the careful soul and the troubled  
heart;

And because she lost her temper once, and  
because she was rude to the Lord, her  
Guest;

Her Sons must wait upon Mary's Sons—  
world without end, reprieve, or rest.

They do not preach that their God will  
rouse them a little before the nuts  
work loose;

They do not teach that His Pity allows  
them to leave their work whenever  
they choose.

Not as a ladder from Earth to Heaven, not  
as an altar to any creed,

But simple service, simply given to their  
own kind, in their common need.

And the Sons of Mary smile and are blest  
—they know the angels are on their  
side.

They know in them is the Grace confest,  
and for them are the Mercies multi-  
plied.

They sit at the Feet, and they hear The  
Word—

They have cast their burden upon the Lord,  
and the Lord He lays it on Martha's  
Sons.

The Anglo-American poet, Alfred  
Noyes, sharpens up his pen and enters  
the lists at full tilt against the cham-  
pions of literary Bolshevism in his lat-  
est volume, *The New Morning*:

It is not true. Only these "rebel" wings,  
These glittering clouds of "intellectual"  
flies

Out of the stagnant pools of midnight rise  
From the old dead creeds, with carrion-  
poisoned stings.

They strike at noble and ignoble things,  
Immortal Love with the old world's worn-  
out lies,

But even now, a wind from clearer skies  
Dissolves in smoke their coteries and wings.

As we should expect the author of  
the epic of Drake and the Tales of the  
Mermaid Tavern is not going to submit  
tamely to being called Victorian and  
relegated to a backshelf because he  
thinks there is still good in the old  
literature:

Homer could not scintillate,  
Milton, too, was merely great.  
That's a very different matter  
From talking like a frantic hatter.  
Keats and Shelley had no tricks,  
Wordsworth never climbed up sticks.  
Children, let a wandering fool  
Stuff your ears with cotton-wool.

Mr. Noyes stands for the eternal  
truth and the well tried ways against  
these frantic fashions:

They are crying a new rose for Eden,  
A rose of green glass. I suppose  
The only thing wrong with their rose is  
The fact that it isn't a rose.  
And here is a song without meter;  
And, here again, nothing is wrong:  
(For nothing on earth could be neater)  
Except that—it isn't a song.  
Well. Walk on your hands. It's the latest!  
And feet are Victorian now:  
And even our best and our greatest  
Before that dread epithet bow.

Yet again Mr. Noyes puts his criti-  
cism in the form of "an epistle from a  
narrow minded old gentleman to a  
young artist of superior intellect and  
intense realism":

You hate the hearth, the wife, the child  
You hate the heavens that bend above  
them.

Your simple folk must all run wild  
Like jungle-beasts before you love them.

I let Victoria toll her bells,  
And went with Strindberg for a ride, sir,  
I've fought thru your own day as well  
And come out on the other side, sir,  
The further side, the morning side,  
I read free verse (the Psalms) on Sunday,  
But I've decided (you'll decide)  
That there is room for song on Monday

This sounds nearly as pessimistic about the state of contemporary literature as Tennyson's "Locksley Hall Sixty Years After" and that was written in the halcyon days of the early eighties. But then Tennyson was not so much shocked by the Zolaism of that day as the *Quarterly Review* was at Tennyson's first poems in 1832. It can be proved by the best authorities that poetry has been on a continuous decline since the days of Homer or rather before, for Homer was a mere redactor, decked with the borrowed plumes of his betters. We must therefore expect that poetry will go on getting worse, altho to us, as to all preceding generations, this appears impossible.

One of the interesting things in an editor's occupation is to watch the reaction of his public toward any new forms of art and literature. Thirty years ago when The Independent first began publishing the Hoosier rimes of Riley, its readers were shocked and wrote in to call the editor's attention to the fact that these were not like what Tennyson and Longfellow wrote. So a few years ago when The Independent began publishing the free verse of Amy Lowell, Robert Frost and others, we again were informed that this was not poetry, but rank nonsense.

Suspecting that the offense lay in the form, we printed part of Emerson's essays on "Experience" as free verse under the title of "Puss and Her Tail" with the author's name written as H. O. Nosreme, and asked our readers' opinions of it.

The replies would have made Emerson's ear burn, his left one. A class of English students in one of the state universities found it "uninteresting," "unintelligible," "nothing but words," "queer," "hard to read," "shocking" and "meaningless," and other readers said it was "deficient in idealism," "written by the office boy," "worthless and commonplace," "foolish," "like the Katzenjammer Kids" and "crude," tho the admirers of "libertine verse" rallied gallantly to its support. The results of this interesting experiment in literary reaction may be found in The Independent of January 8, 1917.

On the whole, we find that the American people, as represented by our readers, take an interest in *vers libre* and sometimes like it, but on the whole they agree with the preference expressed by Lowell in his "Table for Critics":

I'm not over-fond of Greek metres in English,  
To me rhyme's a gain so it be not too jinglish.

### BLIND ALLEY

By W. L. GEORGE

BLIND ALLEY is a long novel, dealing with political and social conditions in England during the war. Four years of war have wrought a change in the womanhood of England, and it is this change that Mr. George mirrors in this big fearlessly written novel of a typical English family in war time.

The Chicago Daily News said of BLIND ALLEY:

"A wonderful book. A deep sympathy and understanding of men and women. A cynical idealism—ideals of the highest, cynical because George knows they are too beautiful to be possible. . . . 'Blind Alley' is an extraordinary novel. But it is more than that. It is a cry in the night."

431 pages. \$1.75 net

## AGAINST THE WINDS

By KATE JORDAN

AGAINST THE WINDS is a powerful analytical novel, invested with the qualities of romance and dramatic suspense that cannot fail to appeal to a wide reading public. The story of Naomi Tway's struggle Against the Winds—of poverty—of an unsuitable marriage—of a love that finally comes to possess her recklessly—is rich in unusual incidents.

The New York Times said of AGAINST THE WINDS:

"Conceived and written in a spirit of romance, the novel is dramatic and holds the reader's attention throughout—an entertaining and vivid story, with an abundance of variety and color."

With four illustrations by Clark Fay. \$1.50 net

LITTLE, BROWN AND COMPANY, Publishers, BOSTON.

ought to learn from German experience, for it is my belief that our civilization will never be safe until we have learned thoroughly certain of these lessons.

Certain fundamental features of German organization we could indeed incorporate to excellent advantage into our own political and social administration. We are familiar with the military efficiency of Germany: such familiarity has been forced upon us.

Many of us know less of her efficiency along political and commercial lines, gained thru careful training of expert officials even as the military efficiency is the result, chiefly, of the trained officer group. The military organization wins the preliminary victory but the efficiency of the political and commercial organization preserves the fruits of victory.

The highly trained civil service which holds out rewards to industrious workers gives a well-oiled machinery for carrying out government ideas. The honors paid to the achievements of the university group make for an intellectual support of the government which is far-reaching in its effects. Training for leadership is a fundamental part of the German idea and in this we should emulate her.

We have been disposed to think that individual initiative was crushed in Germany. Such initiative, when directed only to individual ends, is indeed not encouraged, but when for the good of the state is not only encouraged but stimulated. This results in the development of trained leaders. More than ever before do we need leadership. Without it we shall fall and we cannot get it without training. In this, as in many another thing, can we learn from our enemy.

This, briefly, is the gist of this book, which, tho written while the war was still in progress, is equally timely now. It is essentially reconstructive in its point of view and touches on a great many of the problems of the war of ideas which is sure to begin now that the war of force is at an end.

*The World War and Leadership in a Democracy*, by Richard T. Ely, Macmillan Co., \$1.50.

### The East, Far and Near

AFTER reading *The Open-Door Policy and The Territorial Integrity of China*, by Shutaro Tomimas, A.M., one might well imagine China throwing up her hands and crying aloud to be saved from her friends, anything to get some sort of door fixed up against their persistent intrusions. Apparently they all love China so much that they stay long after the hours usually proper to neighborly visits. What is worse, they quarrel among themselves all over the place about China's real estate and other effects, which is naturally alarming to China in delicate political health. While Chinese territorial integrity was guaranteed by no less than seven agreements, four between Japan on the one hand, and France, Germany, Great Britain, Russia and the United States on the other, together with one between Germany and Great Britain, one between France and Russia, and one between Great Britain and Russia, the only one of these nations which did not occupy Chinese territory is the United States.

Japan, according to Mr. Tomimas, is, of course, a very best friend of China, tho somehow reports from the Peace Conference indicate that the Chinese plenipotentiaries were rubbing their chins a trifle dubiously over it. Mr. Tomimas charges that "China has been employing for many years, as a last resort, her traditional policy of setting foreign countries against each other, out of which confusion she is to find the vantage ground of her own security." For China to find her own security

would hardly be a danger to, say, Japan, and might be faced by the rest of the world with benevolent equanimity. Mr. Tomimas is fearful we do not see the facts. Some of them are plain to behold without the need of a political microscope.

A book of exceptional value to political students of the Far East problem is *Foreign Financial Control in China*, by T. W. Overlach. The author begins with an excellent historical introduction unfolding the gradual opening up of China to foreign influence and proceeds to set forth clearly and concisely the impelling motives, chiefly commercial, which drew Great Britain, Russia, France, Germany, Japan and the United States into closer and often conflicting relations with China.

The chapter on the United States is especially illuminating. In this the author defends our "dollar diplomacy" as in the best interest of China, hence it should not have been abandoned. His chapter on International Control and his conclusion complete a work of interest for any one who has given some thought to the future of China.

The text for Basil Mathews's *Riddle of the Nearer Asia* might well be the quotation:

Islam is a great advance on the animism that it superseded, but it is an advance into a *cul de sac*. It leads up a blind alley beyond which progress is only possible by breaking down the very wall of "suras" that makes it Islam.

Condensed within a small compass, Mr. Mathews analyzes with clear sighted ability those racial problems of the Nearer East so difficult of present adjustment, and of which the absolutism of Islamic dogma stands as a formidable barrier to modern civilization. As Mr. Mathews shows, it was this baleful influence which shattered high hopes for the Young Turk party when it overthrew the old regime under the promising name of "The Committee of Union and Progress." If its unity signified anything it was to commit further atrocities upon the Greeks and Armenians, while as to progress its policy remained government by the Mohammedan sword.

From the Nearer East, however, came the greatest charter of human liberty in Christianity. The question Mr. Mathews puts, "is not whether Christendom has failed either in the Near East or in the world at large, but whether Christianity has the power to succeed?" He agrees with Mr. Chesterton that "Christianity has not been tried and found wanting, but has been difficult and not tried." Mr. Mathews' effort is indeed well worthy the eulogistic preface by Viscount Bryce, and is to be recommended especially to students of the Near East problem.

*The Open-Door Policy and the Territorial Integrity of China*, by Shutaro Tomimas. A. G. Seiler. *Foreign Financial Control in China*, by T. W. Overlach, Macmillan Co. *The Riddle of the Nearer Asia*, by Basil Mathews. G. H. Doran & Co.

### What Do You Want to Know?

PERHAPS you knew that a dandelion is more than a pesky weed; maybe you're even fond of dandelion salad; but did you know that the root which has medicinal qualities is sometimes as much as twenty inches long, and that 200,000 pounds of it are imported into this country every year? or that the plant's name, meaning "tooth of a lion" was suggested by the smooth, coarsely toothed leaves?

If you've thought about it perhaps you've realized that the old playtime chant "That's no good, chop it up for firewood" doesn't apply to matches. They are made only of the best grade of white pine, from which all knots and cross grains have been re-

## AMERICA'S OWN WAR BOOK

# My Company By Captain Carroll Swan

The real story of a typical American company at the front, told by the Company Commander. No fine writing nor exaggeration; just a straight-forward account of the exploits, adventures, and every day lives of Tom and Dick and Jack and of all the other boys in the company.

"The most welcome book that could be published."—NEW YORK SUN.

"A genuine American story of the war."—ROCHESTER POST EXPRESS.

"The first intimate view of what American men did when the Overseas Army really went into action."—PHILA. PRESS.

"It would be difficult to imagine a more vivacious, red-blooded book than this or one which more keenly makes the reader hear the roar and crash of the shells and smell the acrid reek of powder and gas. A thousand touches illumine the book with human nature and with the real spirit of the American at war."—NEW YORK TRIBUNE.

"A vivid revelation of what our boys have done in the battle for freedom. Events under fire are so realistically told that you close the book with the feeling that at last you have been privileged to see what 'action at the front' really was."—ARMY & NAVY REGISTER.

"My Company will appeal to thousands of Americans because it is the story of the American privates and lesser officers, as told by a company commander. Capt. Swan writes simply but stirringly, and one can tell before going far that he loved his men."—DETROIT SATURDAY NIGHT.

### ORDER FORM

I enclose \$1.50 for which please send me a copy of "My Company."

Name .....

Address .....

For a genuine American War book, a vivid intimate account of American pluck and American achievement, sign and mail this order form today to your bookseller or to the publishers

moved. About how many matches do you think can be turned out in one day? According to the *World Book* the answer is two million, requiring the services of seventy-five operatives.

Informative surprises of this sort are the kind you come across thruout this new ten volume encyclopedia. It's an automatic question answerer for children, but it can tell grown-ups a lot of things they never knew before. Any ordinary dictionary will define words, but the value of the *World Book* is its explanations and its list of related subjects appended to the more important articles.

The style is thoroly readable, and it is with pleasure that one discovers one can find other than dead men among the biographies. There are numerous illustrations, diagrams and maps, outlines and review questions that are of great value to the student. But one cannot help wishing that the editors had made the set really complete by listing articles under more than one name when the chances were even that it would be looked for under another than that given. For instance, any number of little New England towns are given, but there is no mention of West Point, and after turning to United States Military Academy one is directed to a third volume and told to "see Military Academy, United States."

The *World Book*. 10 vols. W. F. Quarrie Co.

## WHAT WILL ITALY DO?

(Continued from page 210)

Italian army on the Piave and at Vittorio Veneto, rankles in the Italians' breasts. I have heard the "Marseillaise" received in silence when "God Save the King" and "The Star Spangled Banner" were loudly applauded.

There is resentment also against England, but it is not so deep. If she, as well as France, refuses to honor her signature to the Treaty of London, which guaranteed to Italy all the territory, except Fiume, which she is demanding, France will be blamed—France and Wickham Steed, editor of the *London Times*. Mr. Steed was long known as a warm friend of Italy's, and Italians find great difficulty in accounting for the change in his attitude.

They also blame President Wilson for insisting that all secret covenants made during the war be set aside, thus giving France and England an excuse for treating the Treaty of London as a "scrap of paper." That Italy alone of all the Entente Powers, should be robbed of the fruits of her victory, is bad enough, but that she should be robbed not by her enemies but by her friends is what makes Italians indignant. They feel she is being treated not as a co-partner who contributed her full share toward winning the Allied victory, but as a negligible quantity, and they are especially bitter at what they call the base ingratitude of France who, they say, was twice saved by Italy in this war.

The keenest sighted men in Italy—her great manufacturers and engineers, for instance, who take little part in politics—are even more bitter than the mass of the relatively uninformed public. I have talked with many of these leaders of the country's business, and the tone of their conversation is always the same. One of the greatest of them said to me:

"The eastern shore of the Adriatic is absolutely necessary to us, strategically. We shall not be masters in our own house until we possess our own doorstep. With the eastern shore of the Adriatic ours we can do almost without a fleet, for we shall not need to defend our frontiers. With it owned by any one else, we shall have to increase our navy and keep always a pow-

# Lippincott Books

The Omar Khayyam of the Bible

## A GENTLE CYNIC

Being the Book of Ecclesiastes

By MORRIS JASTROW, JR., Ph.D., LL.D.,

Author of "The War and the Bagdad Railway," etc.

A delightfully human book on the Omar Khayyam of the Bible, with an exact translation of the original text. How it came to be written and who wrote it (and it was not Solomon), why additions were made to the original text and the whole interesting story is here given. A delightful exposition of that "uncomfortable interrogation mark," the first author who wrote under a nom de plume. Small 4to. \$2.00 net

## THE SOUL OF ANN RUTLEDGE

The Story of Abraham Lincoln's Romance

By BERNIE BABCOCK

This remarkable novel, based upon the true story of Abraham Lincoln's early love affair, revives in the pioneer setting of the times, one of the rarest and most exquisite love stories in history. The story of Lincoln's romance has never before been told.

Frontispiece in color by Gayle Hoskins \$1.50 net

## WILD YOUTH—And Another

By SIR GILBERT PARKER

"It has a call to the heart of youth that will reach hearts no longer young. It has a dramatic intensity that ensures its ability to capture the imagination and hold the reader spellbound. It is the tale of a writer who has had a fresh inspiration, who has suddenly seen with a clearer vision and an imagination newly, stirringly stimulated."—*Philadelphia Press*.

## THE DIAMOND PIN

By CAROLYN WELLS

Fleming Stone, the Sherlock Holmes of American fiction, the irrepressible "Fibsy," and the lovely Iris Clyde become involved in a curious and inexplicable mystery—the outcome of a practical joke played by a whimsical old lady. Love, humor, mystery, all play their parts in this clever story.

Frontispiece in color by Gayle Hoskins. \$1.35 net

## THE RED SIGNAL

By GRACE LIVINGSTON HILL LUTZ

Author of "The Enchanted Barn"

A real American girl outwits a band of spies and agents for destruction in this country. It is a breathless and exciting yarn. Perhaps the finest touch is the heroine's gradual forgetfulness of self and safety as she realizes how her country can be served.

Frontispiece in color. \$1.35 net

## HIDDEN TREASURE

A Story of Modern Farming

By JOHN THOMAS SIMPSON

This is above all an intensely interesting story for boys, but written with the distinct purpose of inspiring boys with the "back to the farm" idea, and also to point out to country boys the great commercial possibilities right at home.

Frontispiece and 16 illustrations. \$1.50 net

## TRAINING OF A SALESMAN

By WILLIAM MAXWELL

Vice-President, Thomas A. Edison, Inc.

Selling is an art every one in business should cultivate—we all have something to sell. The author has packed in this small volume concrete and constructive advice on all phases of salesmanship, all the ins and outs of the seller's art told in a humorous and pointed way which makes it unforgettable.

Illustrated. \$1.50 net

## TRAINING FOR THE ELECTRIC RAILWAY BUSINESS

By C. B. FAIRCHILD, JR.

Prepared under the Direct Supervision of T. E. MITTEN, of the Philadelphia Rapid Transit Company.

This addition to Lippincott's Training Series presents a very broad view of the problems confronting those engaged in the electric railway business, and at the same time it abounds in suggestive details and principles for those who wish to put into operation the most recent developments.

Illustrated. \$1.50 net

## THE FINE ART OF PHOTOGRAPHY

By PAUL L. ANDERSON

This new book will be heartily welcomed by camera workers, as it sets forth the underlying principles of art in so far as they can be applied to photography.

erful fleet to defend our shore that can be defended in no other way. France is doing everything to prevent Italy from becoming a great Mediterranean power. But France's policy is blind. If it succeeds we shall be driven back against our own will into the arms of Germany.

"Think what that means," he continued. "The German people are going to end this anarchy very soon. We who know the German people are quite sure that a well organized government of some sort will be established there before many years. Russia will inevitably be reorganized commercially and industrially by Germany. There is nothing we Allies can do to prevent it, and the states that arise out of the debris of the Austrian Empire are so situated geographically that they must be dependents of Germany. In the near future Japan will ally herself with Germany and Russia; this is not merely my opinion but that of all those in Europe who are in a position to know and who dare to speak their real beliefs. Germany, with all the vast resources of Russia to draw from, with German Austria united to her for the first time, will within the next twenty-five years be stronger than ever.

"Do France and England and America want Italy on their side as against this great German-Oriental combination? Do they want Italy to stand as the southwestern bulwark of the western world? Or are they content that Italy shall join hands again with Germany and stand as the southwestern bulwark of a central European alliance? In a word, do they want Italy as a friend or as an enemy?

"We sincerely want to be the friend of France and England. We should like to be America's advanced outpost in the Mediterranean. We do not want to fall back into Germany's arms. But if you expect us to be your friend you must treat us as a friend. If you treat us as an enemy, we shall seek friends elsewhere."

When this man said "we do not want to fall back into Germany's arms" he was speaking for himself and many others. But this is not true of all Italy's manufacturers and men of business. It must not be forgotten that Germans were very good friends of Italy, that there is an immense amount of German capital invested in Italian industries and banks, and that many Italians would frankly welcome a reconciliation with their old allies, the Germans, against whom they went to war reluctantly. They see in this the only speedy way to develop Italian industry. They wish Americans would come to their aid with capital and with that power of organization which seems strangely lacking among Italians. They would willingly be dependent upon us for the coal and iron and copper that they must have, but they refuse to be dependent upon France for them, for they know that France would not treat them fairly.

But this indignation and resentment, universal as it is, is not the only ground for discontent. It is the most important, however, for if Italy had been able to secure all that it went into the war for the people would have been willing to bear their heavy burdens a while longer. As it is, they are beginning to think that those who opposed their entrance into the conflict may have been right. They are asking, "What did we go into the war for? For a few hundred miles of snow-clad mountains and the little city of Trento?" And they answer themselves by saying: "We could have got all that by remaining neutral. Austria offered us more than that in 1915. We might better have accepted Giolitti's 'parecchio' and avoided all this bloodshed and suffering."

The Official Socialists, who have never for a moment ceased their anti-war propa-

ganda, who continued thruout the war to preach peace on any terms, who dinned into the ears of the peasantry that this war was brought on by the gentlefolks to enrich themselves and to enslave the common people by forcing them into the army, that it was a gentlefolks' war and was being fought by the farmers for the exclusive benefit of the gentlefolks, these astute Socialists are saying, "didn't we tell you so?" and are pointing to the profiteers on the one hand and to the almost starving poor on the other as proof that what they had said was true. The Socialists are openly defending the Bolsheviks of Russia, bringing on strikes that are as nearly general as they can make them, fanning the smouldering fires of discontent wherever they see them. Their official organ, *Avanti*, in spite of the many white spaces in its pages where the censors have wielded the ax, contains every day columns of what we here should call incendiary matter.

There is no coal in Italy; England, who had been supplying the 650,000 tons a month that are needed to keep the factories going, is no longer able to furnish it; it is a slow process getting coal from America, now that there is such a shortage of ships, and the freight rate to Genoa is \$70 a ton! The factory owners have been straining every nerve to keep their establishments going; not because there is any money in it under present conditions, but to keep their employees at work, for they and the Government fear the result of turning loose an army of 300,000 or 400,000 unemployed men and women. For the same reason the Government closes its ears to the clamor for immediate demobilization, and is letting the soldiers return home only slowly.

Wages in the factories have been high and employees think they ought to continue on the war-time scale. Employers think differently, especially as the war-time profits of many of them are still only on paper, the Government not yet having paid fully for the munitions it bought.

So all classes of men are filled with uncertainty and discontent. The Government seems unable to devise practical measures that will give employment to large numbers of workers, keep the factory wheels moving and provide for paying the crushing war debt of the nation. The rate of exchange makes imports an expensive luxury, yet there are things that Italy must import, and there are few things which Italy can export to the nations from which she buys. How, then, is she to pay for her imports as well as the heavy interest on her foreign debt? These are some of the knotty problems with which a none too strong Government is wrestling. The new Secretary of the Treasury, Signor Stringher, who resigned from the management of the Banca d'Italia to undertake the task of reorganizing the country's finance, is probably the ablest banker in Italy, and the country looks to him to find a way.

But the imposition of new or higher taxes will be an experiment full of peril, in the present state of the public mind.

If the rebellion breaks out, I look to see it begin in one of the industrial centers or in the Romagna. A great shutdown or a great strike at Turin, Prato, Bologna or Terni might easily start the trouble, for the extreme Socialists of the I. W. W. or Bolshevik type are ready to incite it at the first opportunity.

Whether the revolution would overturn the monarchy or not depends largely upon the attitude of the King. As I have said, Vittorio Emanuele is universally beloved; he is idolized by the army and navy.

I heard a fantastic suggestion made by an admiral of the Italian navy, quite seriously; this was that the King might head a revolution. This would not be so un-

precedented as it seems at first, for it would be but a *coup d'état*. There is no doubt that if Vittorio Emanuele were to call upon the army and navy to support him in a radical, revolutionary turning out of the present bureaucracy, coupled with confiscation of vast estates and swollen fortunes, he would have their enthusiastic support. And if in the process the people demanded a change to a republican form of government, there is no doubt whatever that he would be elected President. I have asked many of the leaders of the Republican and Democratic parties who, in the event of a republic being founded, would be the first President, and all, without exception, answered, the present King. And Victor Emanuel, I believe, would consider it a greater honor to be a president elected by the people than to reign over them as a hereditary monarch.

In the idea of the King heading a revolution there is something that would appeal to the artistic and romantic sense of the Italian people; it would be such a *bella gesta*!

And I believe it would be successful. The King is full of common sense. He is the most democratic of monarchs. Chatting with a soldier or a friend he always says: "My wife," or "my little boy," never "the Queen," or "the Prince of Piedmont." During the war he entertained royal guests and generals of the Allied armies sitting beside a road eating such a luncheon as he could carry in his car or as the nearest mess could prepare. He knows, perhaps better than any other man in Italy, what are the defects in the country's government, and he knows the men who could successfully reform the system.

Italy has popular government today, but she suffered for so many centuries under the oppression of foreign rule, with corruption, favoritism, and all that was worst in government, that a vast number of her people do not yet realize that it is in their power to select their own rulers, and they tamely submit to having candidates from distant points foisted upon them by the many political parties into which the nation is split. There are far too many parties in Italy, and the result is that no one party is likely to have a working majority in parliament; therefore, every ministry must be a coalition, with inevitable compromises and deals. The present parliament was elected before the war; a large number of its members owe their election to Giolitti, whose methods were those of Croker and Platt. It never fairly represented the people; the people forced it into the declaration of war, but ever since the disaster of October, 1917, its members have not dared to do anything but be guided by popular opinion. The people today dictate to its deputies and look forward to the coming elections to inflict political death upon most of them.

The people have been hardened by the war and by the sufferings that it has entailed. I have tried to set forth the many ideas that are seething in their heads and that make an insurrection probable if their aspirations are unsatisfied.

Nevertheless, we must not lose sight of the fact that the Italian people are by nature endowed with much common sense; that they are good at heart and have a sunny disposition. There are crying grievances, and any revolution that breaks out, altho it might be fanatically fierce at the beginning would, I am sure, give way to sober second thought and after a few first days of lawlessness and bloodshed the good humor of the people would return. Bolshevism is the fear of hunger. There may be an outbreak of it in Italy, but it is not likely to take a serious hold of the people, and I am sure it will not last long.

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

- I. Poetry and About It. By Edwin E. Slosson.
  1. Define "poetry," "prose," "verse," "free verse."
  2. What is meant by "a poetic revival"? What periods of English literature are especially notable for the production of poetry?
  3. What is "the new movement" in the writing of poetry?
  4. Explain the following: "Poetry is today less a narcotic and more a nourishment."
  5. Explain the following: "Liberation from moldy conventions and stale sentimentality."
  6. Explain the saying: "Our poetry has become polyglot."
  7. Read aloud the list of present-day poets. Tell something concerning the work of any one.
  8. Read aloud "Prayers of Steel." Interpret the poem.
  9. What values may "the new poetry" contribute to literature?
  10. Prepare a report that will explain the nature of "The Warner Library of the World's Best Literature."
  11. Tell something concerning the literary work of the following: Meredith, Hardy, Stevenson, Shaw, Kipling, Conrad, Wells, Galsworthy, Bennett.
  12. Read aloud the selection from Masfield's "On the Spanish Main." Show how the selection is related to Stevenson's "Treasure Island."
  13. Define the following words: quinquere, galleon, amethyst, moldores. Explain the significance of the following names: Nineveh, Ophir, Palestine, The Isthmus, The Channel.
  14. Read aloud Masfield's "Cargoes." In what does the beauty of the poem consist?
  15. What does the writer mean in calling Kipling "a journalistic poet"?
  16. Read aloud the four selections from Alfred Noyes. What serious criticisms of modern poetry does Alfred Noyes make in these selections?
  17. What criticism of the literature of his day did Tennyson make in "Locksley Hall Sixty Years After"? Does Tennyson's criticism apply to the work of present-day writers?
- II. What Will Italy Do? By Arthur Benington.
  1. Give a talk in which you emphasize the sufferings of the Italian people during the war.
  2. Explain why the Italians made President Wilson their idol.
  3. What recent events have angered the Italian people?
  4. In a single sentence show why Italy needs the eastern shore of the Adriatic.
- III. What Japan Really Wants. By Sidney L. Gulick.
  1. Explain how the news of the week interests us particularly in Japan.
  2. Give a thoughtful talk in which you explain the importance of controlling immigration.
  3. Explain any one practical method for controlling immigration.
- IV. Labor Goes to College. By William Leavitt Stoddard.
  1. Prepare an exposition on the subject, "The Trade Union College of Boston."
  2. Write a letter in answer to the question: "What do labor men want to go to college for, anyway?"
  3. "They particularly want to learn to read and speak good English." Why is English so important?
  4. Contrast the work of an ordinary school and the work of the Trade Union College.
- V. The New Covenant.
  1. Make the principal points of the Covenant emphatic by expressing them in short, emphatic sentences, properly numbered and subordinated.
- VI. The Story of the Week.
  1. Explain, as if to a large audience, exactly what was included in "The Fiume Treaty."
  2. Read aloud President Wilson's words concerning the Fiume Treaty.
  3. Imagine that you are the presiding officer at a debate on "The Question of Kiao-Chau." Give an introductory speech explaining the subject of the debate.
  4. Express every one of "The Nine Points of Labor" in the form of a resolution suitable for a debate.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

- I. The Peace Congress and the League of Nations—"The New Covenant," "Confirmation of the Monroe Doctrine."
  1. Compare the Covenant of the League of Nations as adopted with the original draft which was published in The Independent of March 1. What important changes have been made?
  2. Why was Geneva rather than Brussels or The Hague chosen as the seat of the League?
  3. Does the fact that any nation may withdraw "after two years' notice of its intention so to do" affect the importance or the permanency of the League?
  4. Why was the paragraph excluding matters of "domestic jurisdiction" introduced into Article XV?
  5. What is the significance of Article XXI? Why did the British delegation support the President in securing the adoption of this article?
  6. Mr. Holt in the leading editorial says, "The League of Nations is in no sense the beginning of a 'world state,'" etc. Why does he emphasize this?
  7. Find the exact words which justify five or six of Mr. Holt's twenty-nine enumerated points.
  8. Do the present conditions justify the quotation from Washington in Mr. Holt's last paragraph?
- II. The Problem of Fiume and Dalmatia—"What Will Italy Do?" "The Fiume Treaty," "The President's Position on Fiume."
  1. What, in Mr. Benington's opinion, will be the result in Italy, if the Italian Government's claims to Fiume are disallowed?
  2. With a map before you, study the provisions of the Pact of London. According to this document, what disposition was to be made of Fiume and the Dalmatian coast?
  3. What, according to the President's memorandum of April 14, were the reasons for not yielding to the Italian demands?
  4. Study the statement of one of Italy's greatest commercial leaders as quoted by Mr. Benington. Do the alleged facts outweigh the President's reasons as stated in the memorandum?
  5. If revolution should come in Italy what, in Mr. Benington's judgment, would be its probable course?
  6. "Three things could happen to Fiume," says Mr. Howland. Which of the three does he advocate? Does his solution sound reasonable to you?
- III. The Question of Japan—"What Japan Really Wants," "The Question of Kiao-Chau."
  1. Explain the distinction which Mr. Gulick makes between "equality of race treatment" and "free immigration."
  2. Is Japan's protest against our method of restricting Oriental immigration justified?
  3. What new plan for accomplishing our present purpose does Mr. Gulick propose? Why would the Japanese accept this plan without complaint?
  4. Does this week's news throw any new light on the past, present and future problem of Japanese-Chinese relations?
- IV. Industrial Democracy in Great Britain—"The British Way with Social Unrest."
  1. What were the conditions which led to the recent industrial conference in England? Give the chief clauses of the agreement entered into by labor, capital and the Government on April 4.
  2. What part is the Government to play in the new industrial scheme?
  3. Why does the editor declare that "In substance . . . the whole plan is a tryout of collective bargaining," etc.?
  4. Do you agree that the plan is so organized that "it is probable that a true industrial democracy will come into existence"?
- V. Mr. Burleson and His Critics—"Cable Lines Return to Private Ownership," "Mr. Burleson's Other Troubles."
  1. Write a brief resumé of Mr. Burleson's statement. Do you feel with him that Government ownership has not had a fair chance?
  2. What is the basis of Mr. Mackay's criticism of Mr. Burleson?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## THE NEW PLAYS

*I Love You.* A thoroly wholesome, deliciously nonsensical and capitally acted farce in which a Harvard-Oxford butler and an oratorical electrician mingle with the low brows of high society. (Booth Theater.)

*Come-On Charley.* A dream extravaganza founded on the stories of Thomas Addison. Hearty, harmless and humorous. (Forty-eighth Street Theater.)

*Fires of Faith.* A Salvation Army film with Commander Evangeline Booth herself in the cast. While it is propaganda, it is interesting as a photoplay of the Salvation Army in war time, and will bear favorable comparison with the best artistic productions of filmland. Net receipts go to the Salvation Army Home Service Fund. (Harris Theater.)

*Shakuntala.* Greenwich Village vibrates between extreme modernity and revived antiquity. The famous Sanskrit epic of Kalidasa is presented in artistic form with lighting and grouping and draping that bring out well its imperishable poetry. (Greenwich Village Theater.)

## BOOKS HELPED—SEND MORE

The signing of the peace treaty terminates the state of war but it by no means ends the soldiers' need for books; rather it serves to increase that need, for with the war excitement past men in the army and navy have now more time to idle. They need books to keep up their morale, to prevent homesickness, to help accomplish the big tasks of reconstruction. Altho the A. L. A. has placed in service more than five million books contributed in this country, has purchased more than two millions, and has put promptly in use the books of the abandoned camps, there have never yet been books enough to satisfy the men in uniform. Men who never read before have learned the habit, and it is catching. Libraries have been opened in hundreds of camps, naval and marine stations, and branches have been established in Y. M. C. A., Jewish Welfare, and K. of C. huts, barracks and mess halls.

A book in war service wears out seven times as fast as a book issued from a public library. A popular book of fiction read in the camp or in the field is fit for the second when it has been issued to four men. In addition to the wear and tear on books read under difficulties in dugouts and in the trenches, and returned to the libraries caked with mud or riddled with shell, many were lost as men were transferred from place to place, or when a regiment went into action. Thousands of books were lost at Chateau Thierry. As a result of the submarine hundreds of boxes of books were sunk before they reached the other side.

—PEDED

Last year the A. L. A. collected three million volumes and the appeal for money

### WHERE

For a time still indefinite there will be men, seven divisions of them, serving in the Army of Occupation in Germany. There will be a substantial army in France thru out a good part of the coming summer, and there are American soldiers serving in Russia and Siberia. One doughboy writes that his whole signal battalion has but four books to read in its abundant spare time. Another asks from the Army of Occupation, "Could you send some reading to a couple of Yanks in Germany, where it's impossible to get any reading at all? If you can't, we are all going bugs!" And the recruiting posters now are calling for 50,000 more volunteers to serve overseas.

The transports need books. During the war it was the custom to open for the use of the troops a couple of boxes of books from the shipment which practically every transport carried. Since the armistice the A. L. A. has established libraries on all transports leaving the United States, but it has never been possible to supply with reading matter the homebound ships.

The War and Navy Departments have found the war libraries so necessary and popular that they have decided to establish library service for every unit in the permanent naval and military establishment of the United States.

The hospitals need books most of all. Not even at home here, in our military hospitals, has the supply of books ever been sufficient for the need. From a hospital at Mars comes the story of a lad who confided to a representative of the A. L. A., "Until the books came I just counted the bricks in the wall day after day." "How long have you been here, sonny?" he was asked. "Three months."

### WHAT KIND

Books of relaxation, novels of action and adventure, detective stories are popular everywhere. Some men like Zane Grey; others insist on George Meredith and Henry James. Conan Doyle, Rex Beach, Stewart Edward White, O. Henry, Edgar Rice Burroughs, Anna Katharine Green, Mary Roberts Rinehart, Bertrand Sinclair and Phillips Oppenheim are prime favorites. Recent fiction of the best sort is in continual demand.

The standard authors hold their popularity; there is a steady call for Dickens, Thackeray and Scott; and many men who have grown interested in things French during their sojourn abroad, are calling for the old favorites of Dumas, "The Three Musketeers," "Monte Cristo," "Twenty Years After" and Mark Twain's "Joan of Arc." Poetry of all sorts is appreciated, particularly anthologies, and a recent request is for "at least one hundred copies of the new Joyce Kilmer poems" for use abroad.

There is a constant demand for up-to-date technical works on a vast variety of subjects—everything from mathematics and electricity to hog raising and embalming, salesmanship, veterinary surgery, and a request from a mule driver for something new on automobiles. These are for the men who wish to brush up on their professions and trades after two years of absence, or who are hoping to secure better positions when they return to civilian life.

The need for new magazines, including the technical ones, is urgent. The newer the better. Weeklies should not be more than a month old; monthlies not more than three months old.

As an army captain puts it: "Send me everything you can as fast as you can. I now have five towns and some two thousand men—just raise the sluice and let the book flood come!"

*See what* the sunshine can do! From far-away Japan comes the soft, snowy fabric from which we build up our tough and almost indestructible stencil paper. In this marvelous transformation *sunlight* plays the important part. No known artificial light will do. It is sun-power that gives the remarkable printing-power to Mimeograph stencil paper. Developed by us for exclusive use on the Mimeograph, this thin, dark-blue sheet has made anew the fine art of duplicating. It delivers *exact* copies by scores of thousands without renewing. Typewriting, handwriting, drawings, etc., it reproduces at high speed and low cost. Our booklet "E" tells about this sun-saturated paper. Ask for it. A. B. Dick Company, Chicago—and New York.

## THE EMPIRE THAT WAS

THE Peace Treaty is a stern document. The conditions which it imposes on the German nation are terrible in their severity. But the sternness is the sternness of righteousness, the severity is the severity of justice. To the German nation and the German people is being meted out not vengeance but retribution.

The rulers of the German Empire, with the fierce approval and the unstinted coöperation of the German people set out to impose the will of German autocracy upon the world by ruthless force. But there was a moral power in the world which, working thru other peoples, would not let it be. The German Empire is no more. Its people sinned the unforgiveable sins of unrighteous ambition and the rejection of every moral standard. The punishment was long in coming; at times it almost looked as tho it might not come at all. But the moral law will not be denied. The righteousness which exalteth a nation is deliberately rejected at a people's peril.

The German Empire was a great power. It was steadily becoming greater. But it desired to be not merely great, but omnipotent. What is the German Empire now?

In 1914 the German Empire included an area of nearly a million and a quarter square miles. Over a million square miles of this territory were outside of Europe, some 200,000 square miles on the European continent. When the peace treaty is signed—for it will be signed practically without change—the German Empire will have shrunk to an area of 160,000 square miles. It will have been stripped of every possession beyond the limits of Europe. It will have lost Alsace-Lorraine with two great cities Strasbourg and Metz; parts of Silesia, West Prussia, Posen and East Prussia with the prosperous port of Danzig; and bits along the Belgian frontier. There will be taken away in Europe nearly 50,000 square miles, and in the rest of the world over a million square miles.

The German army and the German navy, the instruments which were to have put the neck of the world beneath the heel of German autocracy, are to become mere shadows of their former flaunting power. Germany may have an army of only 100,000 officers and men and a navy of six small battleships, six light cruisers, twelve torpedo boats and no submarines.

Germany must abolish conscription, destroy the fortifications of the stronghold of the German navy, Heligoland, build no forts overlooking the Baltic or within thirty miles of the French and Belgian frontier, maintain no military or naval air forces, import or export no munitions of war and manufacture only a specified minimum of such materials, open the Kiel Canal to the merchant and war ships of all nations. German militarism is no more. It was overwhelmingly defeated on the field of battle by the armed forces of the defenders of humanity. It is now, with merciless logic, rendered impotent to make another attempt to dominate the world by force. The world has been made safe from that particular manifestation of autocracy.

Germany is compelled to accept full responsibility for all the loss and damage to which the Allied nations have been subjected and to pay the bill for reparation and restitution which the Allies will assess. The bill will be as large as Germany can pay. The first payment alone will amount to five billion dollars. It will require all the energy and industry of the German people for a long time to come to liquidate that portentous indebtedness; there will be little energy left for the renewal of plans of aggression.

Germany is forced to replace the merchant shipping destroyed by the unholy submarine campaign by handing over all its merchant ships of large size and building others to the amount of a million tons also to be delivered to the Allied powers. So Germany must begin all over again if it will seek to reconquer the trade of the world.

Germany must agree to the trial by an international tribunal of the former German Kaiser for "a supreme offense against international morality and the sanctity of treaties." The mighty prince, whose mailed fist and shining armor were the symbols of the arrogant pretensions of the German Empire, becomes, with the consent of those at whose head he took the field, an indicted criminal at the bar of the world's justice.

The retribution, which the victorious champions of humanity are exacting from the downfallen aggressors against the peace of the world, is full-measured, but it does not pass the bounds of justice and right. The punishment, as all proper punishments ought to be, is the logical sequel to the crime and the indispensable guarantee against its repetition.

## THE INDEPENDENT AND THE COVENANT

ON September 28, 1914, The Independent published a long leading editorial entitled "The Way to Disarm: A Practical Proposal." This editorial was the first attempt in the United States after war broke out, and as far as we know anywhere to formulate in concrete detail the basic principles of a League of Nations. This editorial was taken up and discussed thruout the country, and was the direct occasion of the formation of the American society known as the League to Enforce Peace, which

gave currency to the League idea thruout the world. A year later President Wilson espoused the cause, and to him more than any other man is due the credit of carrying the idea into effect in the form of the present Covenant now finally revised and ready for the acceptance of the world.

It may therefore be of interest to readers of The Independent to recall the five fundamental principles for a League of Nations we proposed eight weeks after the war

began, and to see how far they have been adopted in the Covenant. We reprint them herewith, together with the corresponding clauses of the Covenant:

1. The nations of the League shall mutually agree to respect and guarantee the territory and sovereignty of each other.

The Covenant says "The members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League." Except for the clause "as against external aggression," which is safer than our unqualified guarantee, the two proposals are practically identical.

2. All questions that cannot be settled by diplomacy shall be arbitrated.

In the preliminary draft of the Covenant, submitted February 14, the first sentence of Article XII reads: "The High Contracting Parties agree that should disputes arise between them which cannot be adjusted by the ordinary processes of diplomacy they will in no case resort to war without previously submitting the questions and matters involved to arbitration or inquiry by the Executive Council." In the revised Covenant the sentence reads as follows: "The members of the League agree that if there should arise a dispute between them likely to lead to a rupture they will submit the matter either to arbitration or inquiry by the Council." This provision is borrowed almost word for word from the original American draft for the League brought by our delegation to Paris. It is identical with The Independent's proposal except that in the revised draft the reference to diplomacy is implied rather than specifically mentioned, and "arbitration" and "inquiry" are separated into two distinct methods for settling disputes, whereas in our proposal arbitration would be understood to cover both.

3. The nations of the League shall provide a periodical Assembly to make all rules to become laws unless vetoed by a nation within a stated period.

The Covenant does not provide for a full-fledged parliament as proposed by us. What legislative functions the League has would seem to be divided between the Assembly and the Council. But since the Assembly of the Covenant (a) may have as many as three delegates, and (b) shall, as Wilson proposed, meet at "stated intervals" and (c) shall act by unanimous vote and (d) deal with any matter "within the sphere of the League or affecting the peace of the world," evidently the Assembly of the Covenant is a body that will quite certainly develop into such a one as The Independent first proposed.

4. The nations shall disarm to the point where the combined forces of the League shall be a certain per cent higher than those of the most heavily armed nation or alliance outside the League. Detailed rules for this pro rata disarmament shall be formulated by the Assembly.

The Covenant "recognizes that the maintenance of peace requires the reduction of national armaments to the lowest point consistent with national safety and the enforcement by common action of international obligations." This naturally means that the forces of the League must be "a certain per cent higher" than the forces of any nation or nations the League is likely to fight against, if it is to be able to enforce "international obligations." In this respect the two proposals are practically identical. The Covenant also provides that the League shall formulate plans for reduction of armaments, but the Council is given the power to make the recommendations instead of the Assembly as we proposed. This difference is obviously immaterial.

5. Any member of the League shall have the right to withdraw on due notice or may be expelled by unanimous vote of the others.

The Covenant provides that "any member may, after two years' notice of its intention to do so, withdraw from the League, provided that all its international obligations under the Covenant shall have been fulfilled at the time of

its withdrawal." These specifications are such as would naturally be implied in our proposal. The Covenant further provides that "any member of the League which has violated any covenant of the League may be declared to be no longer a member of the League by a vote of the Council concurred in by the representatives of all the other members of the League represented thereon." The slight difference between this and our plan is that we suggested that the votes of all the members of the League should be required to expel a member, whereas the Covenant gives the nine states represented on the Council the power of expulsion. Both proposals, it will be noticed, require unanimous action on the part of the expelling body.

Since we first formulated these five basic principles for a League of Nations numerous other individuals and organizations, in this country and abroad, have put forth similar programs. Among these are the League to Enforce Peace, the League of Free Nations' Association, the League of Nations' Union, the Chamber of Commerce of the United States, the Socialist Party of America, the Union of Democratic Control, the Fabian Society, the International Bureau of Peace, the Union of International Associations, and the Conference of Socialists of Allied Nations. But any of our readers who may care to compare their detailed proposals for a League of Nations with the Paris Covenant will find that none of them so closely foreshadowed the coming event as that printed in The Independent of September 28, 1914.

## THE CRITICS CONFOUNDED

OF the ten peace treaties signed since the Thirty Years War of 1618-1648 the average time of negotiation has been about fifteen months. Of the four great treaties of the nineteenth century, namely those following the Napoleonic wars, the Crimean War, the Franco-Prussian War and the Russo-Turkish War, the average was seven months.

And now, despite the multitudinous charges of "unconscionable" delays reiterated day after day for the past few months by the Tories, reactionaries and chauvinists of all lands, the much abused Peace Conference that has concluded the greatest war in the annals of history has finished its labors in fifteen weeks!

## CRISES

A diligent perusal of the Peace Conference dispatches served up at the breakfast table each morning and smoking hot from the cables would lead the average citizen to think a world crisis was upon him at least every other day.

Could the Conference, he was asked, survive such dire disputed issues as the freedom of the seas, race equality, the Monroe Doctrine, the guarantee of Germany's debts, the French frontier of liberty, Danzig, Shan-tung or Fiume?

Yet somehow, somehow, the Conference has not blown up in green smoke, and the delegates are still on their jobs, the great newspaper correspondents to the contrary notwithstanding.

All of which leads us to propound the following question: When is a crisis critical?

## THE TROPICAL PROBLEM

THE world is now, broadly speaking, divided into two great areas, the region of independent national states and the region of dependent colonies. The first corresponds closely with the temperate zone; the second with the tropics. Since the break-up of the Russian, Austro-Hungarian and Turkish empires and the liberation of practically every large, small or middle sized nationality in Europe or western Asia from foreign rule, the principle

of national autonomy in the whole of the temperate zone may be taken as substantially established. Nor is it merely a question of the "white race," for no one would now think of annexing Japan and even the partition of China seems likely to be indefinitely postponed. On the other hand, if we except the turbulent little republics of the Caribbean region and a few half-independent tribesmen such as the Abyssinians, the whole of the torrid zone is ruled by aliens from the north.

Aristocracies based on birth or wealth or race or the tradition of class and nation seem to be disappearing, but the aristocracy based on temperature seems to be curiously persistent. Our faith in democracy forbids us to think of this condition of affairs as permanent but it is not probable that any one now living will see it wholly disappear. If the white man (or, more accurately, the man from the cool countries) could solve the question by simply shaking off his burden of "mandates" every good natured person would rejoice. It would be far better to have a Republic of the Congo than a Belgian Congo, an Indian India rather than British India, a United States of Oceanica rather than a string of colonies from Hawaii to Java. We would welcome a Borneo among the Great Powers and another Paris in Dahomey. Unfortunately, the trouble is not that the colonizing nations are greedy and oppressive (tho they sometimes are) but that the dependent countries seem incapable of standing upright without assistance. When a people are too easily conquered there is usually a reason for it.

The task, then, of the nations enjoying mandates is not merely to govern the sections of the tropical world allotted to them and exploit their resources, not even merely to introduce railways, schools, hospitals and just courts of law. It is necessary also to combat that fatal weakness of moral fiber which makes the man from the hot countries so readily a slave to the foreigner or to the still more cruel rule of the native despot. We cannot, it is true, alter climate but we can greatly modify the moral effects of climate by giving a systematic education in responsibility, economic independence and self-respect. Some colonizing nations are doing this, and in so far as they are doing it they justify the mandates with which civilization has entrusted them. Among these nations is the United States, whose good record in introducing free institutions in Hawaii, Porto Rico, the Philippines and elsewhere would justify an even larger assumption of responsibility if at some time in the future the League of Nations should appeal to us to shoulder a heavier burden of empire.

## SOUND SENSE FROM CAPITAL

**M**R. OTTO H. KAHN lays down the following five principles for the solution of the labor problem:

1. The laborer must be given a full voice in determining conditions under which he works.

2. The laborer's living conditions must be made dignified and attractive to him and his family.

3. The laborer must be relieved from the dread of illness, unemployment and old age.

4. The laborer must receive a living wage plus enough extra for a rainy day and to enjoy the comforts, joys and recreations of life.

5. The laborer must maintain a high rate of production if high wages are to prevail.

Mr. Kahn adds further that after labor has got a living wage, capital is entitled to a living wage and then what is left over belongs to both capital and labor in fair proportions.

This is about the most sensible statement from a capitalist we have seen on the labor situation. It is well that our financiers and employers are coming in ever increasing numbers to hold such views, for if they do not, they will run the risk of forcing the whole labor movement into Bolshevism.

## YET SPEAKETH

**T**HE man Washington Gladden stands out full statured in the volume of fifteen selected sermons which is his last message to the world. In these sermons he is the same genial, generous, sensible, brotherly and hopeful man we always found him in life. The theme of the first sermon is the title of the volume: "The Interpreter." In reading this sermon one feels he is listening to a bit of autobiography, looking upon a portrait of the preacher painted by himself. It was Dr. Gladden's lifelong boast that he was nothing but a preacher, and to him the highest function of preaching is interpretation. It was his one supreme business to interpret men to themselves and then to one another. Men often fail because they do not understand themselves. Some one must explain to them their impulses and their dreams. The world is full of suspicion and bitterness because of misunderstandings. Dr. Gladden was never so happy as when he was interpreting one class of men to another. He made the Higher Critics intelligible to the masses. He explained obscure paragraphs of the theologians to the public. He had the gift of grasping and condensing the thought of a writer and expressing it in crystal English so that boys and girls could get hold of it. He helped one class of society to understand another class. For nearly sixty years he labored unweariedly to bring employers and wage earners closer together. Everything needs to be interpreted and expounded, made plain, such as work and play, love and worship, citizenship and democracy, all the things by which men live. The calling of the Interpreter is indeed a high one, demanding knowledge and wisdom and courage and gentleness, and all these gifts Dr. Gladden abundantly possessed. In his period of service as an editor of *The Independent* he was peculiarly successful in putting the imperishable message of the gospel into the language of the day.

One cannot read these sermons without being impressed afresh by the unfailing common sense, the luminous sanity, and the wide sympathy of the preacher. He keeps close to the earth where men live. He deals with what might be called the commonplaces of morality. He does not offer us cake, but bread. After we have partaken of his feast, we rise strengthened to take up our load and proceed on our journey.

The outstanding feature of the volume is its optimism. From first to last Dr. Gladden sang his song in the major key. To him the world was always rolling into light, and it was daybreak everywhere. He was not blind to the world's miseries and wickednesses. He knew humanity's ulcers and running sores, but he still dared to hope. He saw the sins of capital and also the sins of labor, but did not despair. He was not ignorant of the deep corruption of our political life, but the situation was not hopeless. After sketching a depressing picture of political conditions he says: "Do I speak as tho that result were problematical? No: I have never doubted that the kingdom I have always prayed for is coming; that the Gospel I have always preached is true. I believe that the democracy is getting a new heart, and a new spirit, that the nation is being saved." He paints the industrial situation in vivid somberness, but he will not leave his hearers in gloom. "On the whole I believe that, taking our social system as a whole, even as at present organized, truth and goodness tend to prevail over deceit and iniquity. The powers that make for righteousness are proving themselves stronger than the powers that make for wickedness." This was not said by an ignoramus or a novice, but by an old man at the end of life who had observed with keen and scrutinizing eyes thru a pastorate of fifty-eight years, the social, industrial and political developments of our people. Altho dead he yet speaks, and this is what he says: "The kingdom of God is coming. It must come. There is no other way for the children of men to live together. This is the time to believe it. Lift up your hearts, O beloved! It is nigh, even at the doors."

# THE STORY OF THE WEEK

## Terms of the Great Peace

The text of the treaty of peace presented to German delegates at Versailles on May 7 comprises 80,000 words. No treaty so long or dealing with the affairs of so many nations or involving so large an extent of territory has ever before been negotiated in the history of the world. The main features of the treaty may be summarized as follows:

**Preamble**—The parties of the first part are the United States, the British Empire, France, Italy and Japan, described as the Five Allied and Associated Powers, and Belgium, Bolivia, Brazil, China, Cuba, Ecuador, Greece, Guatemala, Haiti, the Hedjaz, Honduras, Liberia, Nicaragua, Panama, Peru, Poland, Portugal, Rumania, Serbia, Siam, Czechoslovakia and Uruguay, who with the five above are described as the Allied and Associated Powers. The party of the second part is Germany. From the coming into force of the treaty the state of war will terminate, and official relations with Germany and with each of the German states will be resumed.

**I. The Covenant of the League of Nations** (published in The Independent of May 10, 1919)—The members of the League will be the signatories of the covenant and other states invited to accede, who must lodge a declaration of accession without reservation within two months. A new state, dominion or colony may be admitted,

provided its admission is agreed by two thirds of the assembly. A state may withdraw upon giving two years' notice, if it has fulfilled all its international obligations. The seat of the League will be at Geneva, Switzerland.

**II. Germany cedes to France** Alsace-Lorraine, 5600 square miles; to Belgium, 382 square miles between Luxemburg and Holland; to Poland, most of Posen and West Prussia and the southeastern tip of Silesia, 27,686 square miles. Germany loses sovereignty over the northeastern tip of East Prussia.

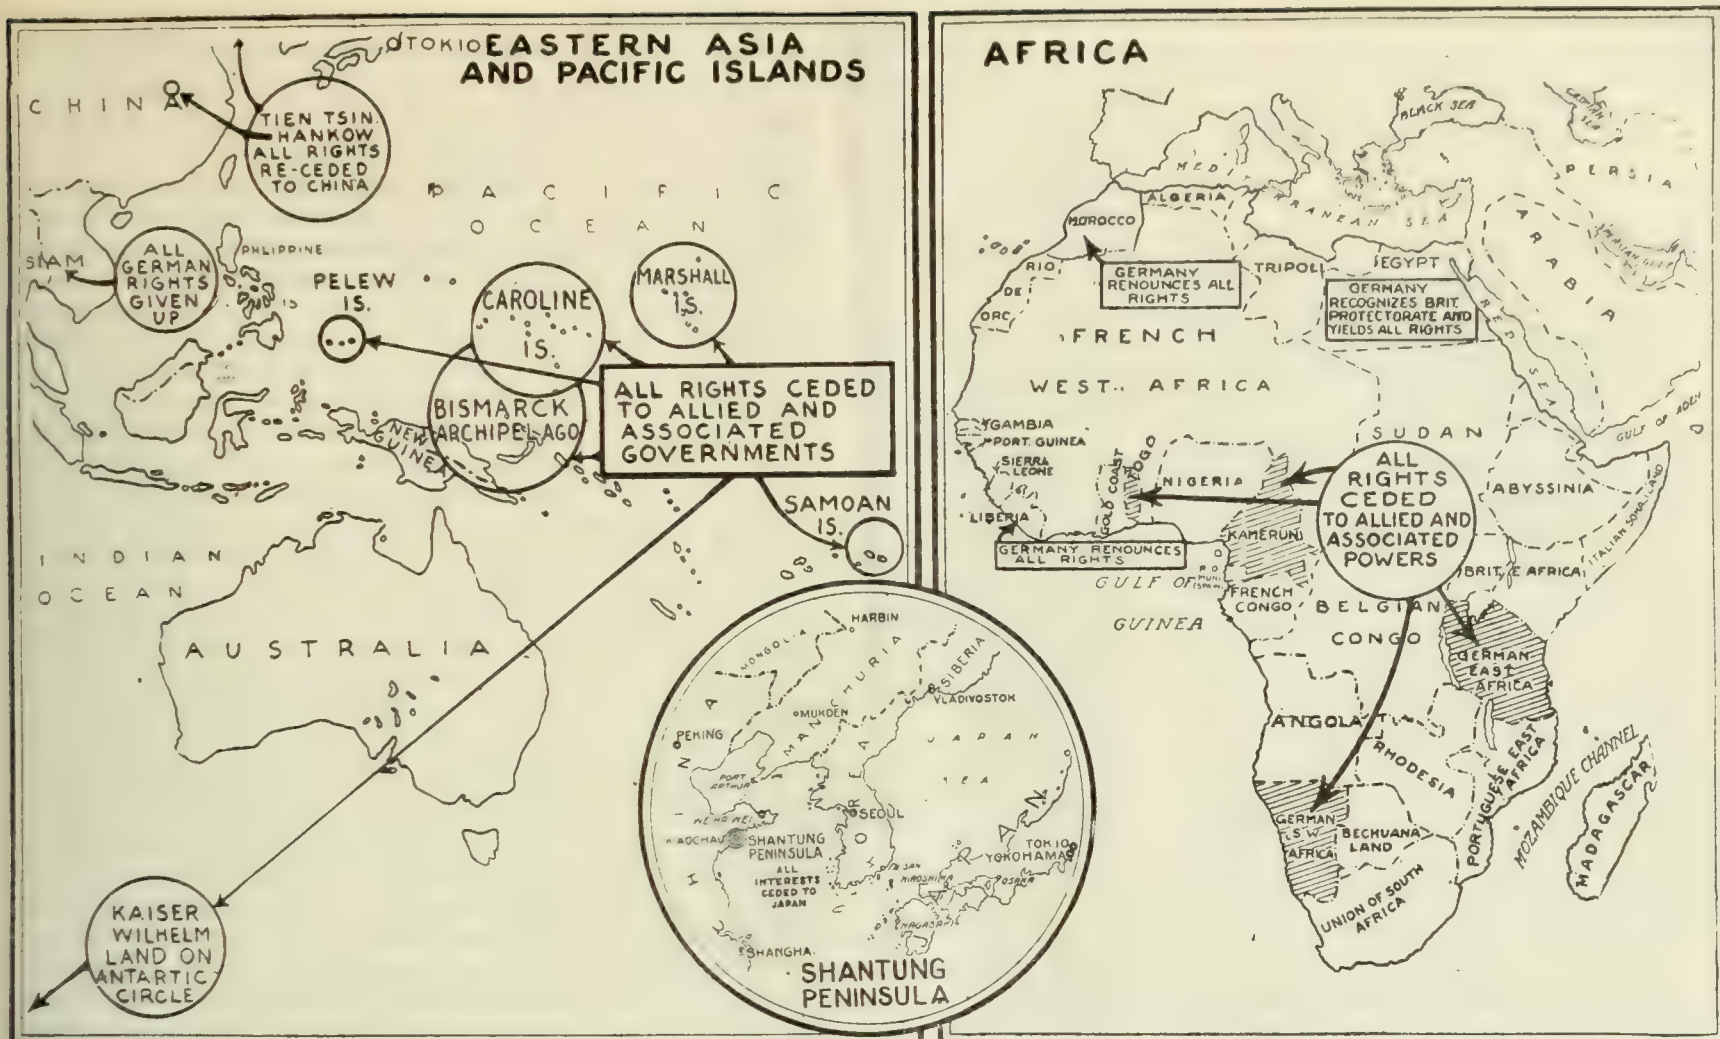

**III. Germany abrogates the treaties of 1839** by which Belgium was established as a neutral state. Belgium is to get Moresnet, Eupen and Malmedy subject to protest on the part of the inhabitants. Luxemburg ceases to be a part of German Zollverein. After recognition of the moral obligation to repair the wrong done in 1871 by Germany to France and the people of Alsace-Lorraine, the territories ceded to Germany by the Treaty of Frankfurt are restored to France with their frontiers as before 1871. Public and royal property and state railroads and bridges pass to France. For five years manufactured products of Alsace-Lorraine are admitted to Germany free of duty. The coal mines of the Sarre Basin are given to France and their value as estimated by the Reparation Commission will be credited against the destruction of coal mines in northern

France by the Germans. The people of the Sarre Basin will keep their present nationality except as individuals may change it, and after five years a plebiscite will be held by communes to ascertain if the population desire to continue under the League of Nations, to unite with France or unite with Germany.

**IV. Germany recognizes the total independence of German Austria and Czechoslovakia.** Germany cedes to Poland the greater part of upper Silesia, Posen and West Prussia on the left bank of the Vistula. An international commission will draw the boundary. Special provision will be made to protect the rights of minorities and freedom of commerce. The boundaries of Poland will be determined in a free, fair and secret vote of the population concerned. Danzig and the district immediately about it will be made into a free city under guarantee of the League of Nations. Danzig will be included within the Polish customs frontier, altho with a free port district. Frontier between Germany and Denmark will be fixed by the self-determination of the population voting in three zones. The zone nearest the Danish frontier will vote as a unit within three weeks after evacuation by Germany. Within five weeks after this vote the second zone will vote by communes. The third zone will vote two weeks later. The fortifications of Heligoland are to be destroyed at Germany's ex-

Courtesy of New York Times

pense. Germany abrogates the Brest-Litovsk treaty and agrees to respect the independence of all territories of the former Russian Empire.

V. Germany renounces all territories outside Europe. All Government property passes to the mandatory. Germany renounces to China the Boxer indemnity and her public property and concessions in Tien-tsin and Hangkow. Germany renounces all property rights and privileges in Siam, Liberia and Morocco. Germany recognizes the British protectorate over Egypt and transfers to Great Britain the powers given to the late Sultan of Turkey for the free navigation of the Suez Canal. Germany accepts all arrangements which the Allied Associated Powers make with Turkey and Bulgaria. Germany cedes to Japan Kiao-Chau and her railroad and mining concessions in Shan-tung.

VI. The German army must be demobilized within two months. The great German General Staff is abolished and the army must not exceed 100,000. Munition factories must be closed except those specifically excepted. The manufacture of poison gas and the importation of munitions is forbidden. Conscription is abolished. The army necessary for internal defense will be kept up by voluntary enlistments for terms of twelve years. Officers must agree to serve twenty-five years. No unnecessary military schools allowed. Clubs, societies of discharged soldiers and universities shall not occupy themselves with military matters. All the fortresses within 50 kilometers east of the Rhine will be dismantled within three months. The execution of these provisions will be under the control of interallied commissions whose expenses will be paid by Germany. The German navy to be demobilized within two

months. Germany may keep six small battleships, six light cruisers, twelve destroyers, and no submarines and not more than 15,000 men in the navy. No member of the mercantile marine will be permitted naval training. The German high sea fleet interned at Scapa Flow and all German warships in foreign ports will be surrendered. Germany must surrender forty-two destroyers, fifty torpedo boats and all submarines. All war vessels under construction must be broken up. Germany will not be allowed to have any armored ship over 10,000 tons. High power wireless stations will not be permitted to send any messages except commercial and these under supervision. Germany renounces all title to certain specified submarine cables. Germany will not be allowed to have any military or naval air forces, except 100 unarmed seaplanes to be retained until October 1 to search for submarine mines. No dirigible shall be kept. The manufacture of aircraft is forbidden for six months. German prisoners and interned civilians to be repatriated at Germany's expense without delay. Both parties agree to respect the graves of soldiers and sailors buried on their territories.

VII. The Allied and Associated Powers publicly arraign William II of Hohenzollern, formerly German Emperor, not for an offense against criminal law, but for a supreme offense against international morality and the sanctity of treaties.

The ex-Emperor's surrender is to be requested of Holland and a special tribunal set up, composed of one judge from each of the five great powers, with full guarantees of the right of defense. It is to be guided "by the highest motives of international policy with a view of vindicating the solemn obli-

gations of international undertakings and the validity of international morality," and will fix the punishment it feels should be imposed.

Persons accused of having committed acts in violation of the laws and customs of war are to be tried and punished by military tribunals under military law.

VIII. The Allied and Associated Governments affirm, and Germany accepts, the responsibility of herself and her allies, for causing all the loss and damage to which the Allied and Associated Governments and their nationals have been subjected as a consequence of the war imposed upon them by the aggression of Germany and her allies.

The total obligation of Germany is to be determined, after a fair hearing, by an inter-allied Reparation Commission not later than May 1, 1921. A schedule of payments is arranged by which these obligations may be discharged within thirty years, subject to postponement in certain conditions. Germany irrevocably recognizes the full authority of the commission, and agrees to supply it with necessary information and pass legislation to effectuate its findings. As an immediate step toward restoration Germany shall pay within two years \$5,000,000,000 in gold or goods. Germany binds herself to repay all sums borrowed by Belgium from her allies and to deliver at once 5 per cent gold bonds due 1926 to the Reparation Commission.

While the Allied and Associated Governments recognize that the resources of Germany are not adequate, after taking into account permanent diminution of such resources which will result from other treaty claims, to make complete reparation for all such loss and damage, they require her to

## We Must Settle Our Account

### Premier Clemenceau's Presentation of the Peace Treaty

*"Gentlemen plenipotentiaries of the German Empire! It is neither the time nor the place for superfluous words. You have before you the accredited plenipotentiaries of all the small and great powers united to fight together in the war that has been so cruelly imposed upon them. The time has come when we must settle our account."*

*"You have asked for peace. We are ready to give you peace. We shall present to you now a book which contains our conditions. You will have every facility to examine these conditions, and the time necessary for it. Everything will be done with the courtesy that is the privilege of civilized nations."*

*"To give you my thought completely, you will find us ready to give you any explanation you want, but we must say at the same time that this second Treaty of Versailles has cost us too much not to take on our side all the necessary precautions and guarantees that the peace shall be a lasting one."*

*"I will give you notice of the procedure that has been adopted by the conference for discussion, and if any one has any observations to offer he will have the right to do so. No oral discussion is to take place, and the observations of the German delegation will have to be submitted in writing."*

*"The German plenipotentiaries will know that they have the maximum period of fifteen days [French idiom for 'two weeks'] within which to present in English and French their written observations on the whole of the treaty. Before the expiration of the aforesaid period of fifteen days the German delegates will be entitled to send their reply on particular headings of the treaty, or to ask questions in regard to them."*

*"After having examined the observations presented within the aforementioned period, the Supreme Council will send their answer in writing to the German delegation and determine the period within which the final worldwide answer must be given by this delegation."*

*"The President wishes to add that when we receive, after two or three or four or five days, any observations from the German delegation on any point of the treaty we shall not wait until the end of the fifteen days to give our answer. We shall at once proceed in the way indicated by this document."*

make compensation for all damages of the Sultan Okwawa, formerly in German East Africa, to his Britannic Majesty's Government.

a. Damages by personal injury to civilians caused by acts of war, directly or indirectly, including bombardments from the air.

b. Damages caused to civilians, including exposure at sea, resulting from acts of cruelty ordered by the enemy, and to civilians in the occupied territories.

c. Damages caused by maltreatment of prisoners.

d. Damages to the Allied peoples represented by pensions and separation allowances, capitalized at the signature of this treaty.

e. Damages to property other than naval or military materials.

f. Damages to civilians by being forced to labor.

g. Damages in the form of levies or fines imposed by the enemy.

The Reparation Commission shall periodically examine the German system of taxation to see that it is fully as heavy proportionally as any of the powers represented on the commission. The commission shall consist of one representative each of the United States, Great Britain, France, Italy and Belgium, with a representative of Serbia or Japan taking the place of the Belgian when the interests of either country are particularly affected. Majority vote on the commission shall prevail, except that unanimity is required on questions involving sovereignty or the cancellation of obligations. Bond issues are presently to be required of Germany as follows: \$5,000,000,000 gold, payable 1921; \$10,000,000,000, bearing 2½ per cent interest between 1921 and 1926, and thereafter 5 per cent; and \$10,000,000,000 with interest at 5 per cent.

Germany recognizes the right of the Allies for the replacement, ton for ton and class for class, of all merchant ships lost or damaged owing to the war, and agrees to cede within two months all German merchant ships of 1600 tons and upward and one-half her ships between 1600 and 1900, and one-fourth of her fishing boats. Germany agrees to build merchant ships for the Allies to the amount not exceeding 200,000 tons annually during the next five years. In order to effect payment by deliveries in kind, Germany is required, for a limited number of years to deliver coal, coal-tar products, dyestuffs and chemical drugs in specific amounts to the Reparation Commission. Germany undertakes to devote her economic resources directly to the physical restoration of the invaded areas by the delivery of animals, machinery, etc., and to manufacture materials required for reconstruction. Germany is to deliver annually for ten years to France coal equivalent to the difference between the annual pre-war output of Nord and Pas de Calais mines and the annual production during the above ten-year period. Germany is to restore within six months the Koran of the Caliph Othman, formerly at Medina, to the King of the Hedjaz, and the skull

of the Sultan Okwawa, formerly in German East Africa, to his Britannic Majesty's Government.

The German Government is also to restore to the French Government certain papers taken by the German authorities in 1870, belonging then to M. Reuher, and to restore the French flags taken during the war of 1870 and 1871. As reparation for the destruction of the Library of Louvain Germany is to hand over manuscripts, early printed books, prints, etc., to the equivalent of those destroyed. Germany is to hand over to Belgium the wings of the altar pieces by van Eyck and Dirk Bouts originally taken from Belgian churches.

Powers to whom German territory is ceded will assume a certain portion of the German pre-war debt, but France will not assume any part of Germany's pre-war debt in Alsace-Lorraine. Germany is to pay the cost of the armies of occupation so long as they are maintained in German territory. This is the first charge on her resources. The next charge is the cost of reparation. Germany is to deliver all sums deposited in Turkey and Austria-Hungary in connection with financial support extended by her to them during the war, and to transfer to the Allies all claims against Austria-Hungary, Bulgaria and Turkey during the war.

IX. The contracting parties agree to put into force the Hague Opium Convention. Religious missions in territories ceded by Germany shall be allowed to continue their work.

X. For six months Germany shall impose no tariff duties higher than the lowest in 1914 and for certain products two and a half years more. For five years, unless extended by the League of Nations, Germany must give the most favored nation treatment to the Allied and Associated Powers. She shall impose no custom tariff for five years on goods originating in Alsace-Lorraine and for three years on goods from the Polish provinces. Ships of the Allied and Associated Powers for five years and thereafter under conditions of reciprocity, unless the League of Nations otherwise decides, enjoy the same right in German ports as German vessels, and have most favored nation treatment in fishing and coasting trade. Germany undertakes to protect the trade of the Allied and Associated Powers against unfair competition and to suppress the use of false wrappings and trade-marks. Detailed provisions are laid down in regard to the carrying out of existing treaties and making new ones.

Germany shall restore or pay for all private enemy property seized or damaged by her. Rights as to industrial, literary and artistic property are to be reestablished. The right is reserved to impose conditions on the use of German patents and copyrights when in the public interest. Except as between the United States and Germany, pre-war rights to sue for infringements committed during the war are canceled.

XI. Aircraft of the Allied and Asso-

ciated Powers shall have full liberty of passage and landing over and in German territory.

XII. Germany must grant freedom of transit by rail or water to persons, goods, ships, etc., from or to any of the Allied or Associated Powers without duties, delays or restrictions. She may not establish any tax discrimination against the ports of Allied or Associated Powers. Free zones existing in German ports must be maintained. The Elbe from the junction of the Ulava, the Ulava from Prague, the Oder from Oppa, the Niemen from Grodno, and the Danube from Ulm are placed under an international commission composed of representatives of the riparian and other states. The Danube Commission resumes its pre-war powers, composed for the time being of representatives of Great Britain, France, Italy and Rumania. The Rhine is placed under the Central Commission, meeting at Strasbourg, composed of four representatives of France, four of Germany, two each of Great Britain, Italy, Belgium, Switzerland and The Netherlands. Belgium is to be permitted to dig a deep canal between the Rhine and the Meuse. To assure Czechoslovakia access to the sea, she is permitted to run her own thru trains to Fiume and Trieste and Germany is to lease her port space in Hamburg and Stettin. The Kiel Canal is to remain free and open on equal terms to the war and merchant ships of nations at peace with Germany.

XIII. Members of the League of Nations agree to establish a permanent organization to promote international adjustment of labor conditions, to consist of an annual International Labor Conference and an International Labor office. (Details given in The Independent of May 3 and May 10). The first meeting of the conference will be held in October, 1919, at Washington to discuss eight-hour day, unemployment, etc.

XIV. As a guarantee for the execution of the treaty German territory to the west of the Rhine, together with the bridgeheads, will be occupied by allied and associated troops for a fifteen year period. If the conditions are faithfully carried out by Germany the bridgehead of Cologne will be evacuated in five years, Coblenz in ten years and Mainz in fifteen years.

XV. Germany agrees to recognize the full validity of the treaties of peace to be concluded by the allied and associated powers with the powers allied with Germany. Germany accepts all decrees as to German ships and goods made by any allied or associated prize court.

The Treaty of Versailles An abstract of the peace treaty was presented to the minor powers at a secret plenary session held in the French Foreign Office at Paris on the afternoon of May 6. As the treaty amounts to 29,000 words, a fair sized volume, it was not read entire, but it was summarized and explained by Captain André Tardieu,

## Germany Is Not the Only Guilty One

### The German Delegates' Reply in Part

"Gentlemen: We are under no illusions as to the extent of our defeat and the degree of our want of power. We know that the power of the German army is broken. We know the power of the hatred which we encounter here, and we have heard the passionate demand that the vanquishers may make us pay as the vanquished, and shall punish those who are worthy of being punished.

"It is demanded from us that we shall confess ourselves to be the only ones guilty of the war. Such a confession in my mouth would be a lie. We are far from declining any responsibility for this great war of the world that has come to pass. The attitude of the former German Government at The Hague peace conference, its actions and omissions in the tragic twelve days of July [1914] have certainly contributed to the disaster. But we energetically deny that Germany and its people, who were convinced that they were making a war of defense, were alone guilty.

"In the last fifty years the imperialism of all the European states has chronically poisoned the international situation. The policy of retaliation and the policy of expansion and the disregard of the rights of peoples to determine their own destiny have contributed to the illness of Europe, which saw its crisis in the world war.

"Russian mobilization took from the statesmen the possibility of healing, and gave the decision into the hands of the military powers. Public opinion in all the countries of our adversaries is resounding with the crimes which Germany is said to have committed in the war. Here also we are ready to confess wrong that may have been done.

"We have not come here to belittle the responsibility of the men who have waged the war politically and economically or to deny any crimes which may have been committed against the rights of peoples. . . .

"But in the manner of making war also Germany is not the only guilty one. Every nation knows of deeds and of people which the best nationals only remember with regret. I do not want to answer by reproaches to reproaches, but I ask them to remember when reparation is demanded not to forget the armistice. It took you six weeks until we got it at last, and six more weeks we came to know your conditions of peace.

"Crimes in war may not be excusable, but they are committed in the struggle for victory and in the defense of national existence, and passions are aroused which make the conscience of peoples blunt.

"The hundreds of thousands of non-

combatants who have perished since November 11 by reason of the blockade were killed with cold deliberation after our adversaries had conquered and victory had been assured to them. Think of that when you speak of guilt and punishment.

"The measure of the guilt of all those who have taken part can only be stated by an impartial inquest before a neutral commission, before which all the principal persons of the tragedy are allowed to speak and to which all the archives are open. We have demanded such an inquest and we repeat this demand.

In this conference also, where we stand toward our adversaries alone and without any allies, we are not quite without protection. You yourselves have brought us an ally, namely, the right which is guaranteed by the treaty and by the principles of peace.

"The allied and associated governments have foresworn in the time between the 5th of October and the 5th of November, 1918, a peace of violence, and have written a peace of justice on their banner. On the 5th of October, 1918, the German Government proposed the principles of the President of the United States of North America as the basis of peace, and on the 5th of November their Secretary of State, Mr. Lansing, declared that the allied and associated powers agreed to this basis, with two definite deviations.

"The principles of President Wilson have thus become binding to both parties to the war—for you as well as for us and also for our former allies. The various principles demand from us heavy national and economic sacrifices, but the holy fundamental rights of all peoples are protected by this treaty. The conscience of the world is behind it. There is no nation which might violate it without punishment.

"You will find us ready to examine upon this basis the preliminary peace which you have proposed to us, with a firm intention of rebuilding in common work with you that which has been destroyed and repairing any wrong that may have been committed, principally the wrong to Belgium, and to show to mankind new aims of political and social progress.

"Gentlemen: The sublime thought to be derived from the most terrible disaster in the history of mankind is the League of Nations. The greatest progress in the development of mankind has been pronounced, and will make its way. Only if the gates of the League of Nations are thrown open to all who are of good will can the aim be attained, and only then the dead of this war will not have died in vain."

formerly the foreign affairs editor of the *Paris Temps* and member of the French mission in America. In the ensuing discussion Marshal Foch expressed his personal opinion that France should not sign the treaty because the occupation of Rhine bridgeheads for fifteen years did not afford sufficient protection for France. Protests were also voiced by the Italian, Portuguese and Chinese delegates on the ground that their interests were not adequately safeguarded. The Italian-Yugoslav dispute is said to have been compromised by ceding Fiume to Italy in 1923. In the meantime Italy is to be mandatory and a new port is to be constructed for the Croats a few miles south.

On the following day the treaty was handed to the German delegates by Premier Clemenceau in the dining room of the Trianon Palace Hotel at Versailles. It was at first arranged that only the representatives of the thirteen nations actively participating in the war should be present, namely, United States, Great Britain, Australia, New Zealand, Canada, Union of South Africa, France, Italy, Japan, Belgium, Brazil, Serbia, Greece, Poland, Portugal, Rumania and Czechoslovakia. But the Chinese delegation appealed to President Wilson to be included, so it was decided to admit also to the hall the representatives of China, Siam, Cuba, Guatemala, Nicaragua, Hayti, Panama, Honduras, Hedjaz, Ecuador, Peru, Uruguay and Liberia. The Italian delegates, Premier Orlando and Baron Sonnino, the Foreign Minister, who had withdrawn from the Paris Conference because of the refusal of Wilson, Clemenceau and Lloyd George to give them Fiume, returned just in time to be present at Versailles. The British and French Premiers were not in favor of admitting correspondents, but President Wilson insisted upon their presence, so a place was found for forty-five representatives of the press, five from each of the leading powers, including Germany.

In order to remove the objection raised by France that she needed greater protection against German aggression, the following pledge was given:

In addition to the securities afforded in the Treaty of Peace, the President of the United States has pledged himself to propose to the Senate of the United States, and the Prime Minister of Great Britain has pledged himself to propose to the Parliament of Great Britain in engagement, subject to the approval of the Council of the League of Nations, to come immediately to the assistance of France in case of unprovoked attack by Germany.

**Reception of German Peace Envoys** The negotiations for the conclusion of the Great War were begun at 3:10 p. m. on May 1, when the German plenipotentiaries presented their credentials in the dining room of the Trianon Hotel, Versailles. Count von Brockdorf-Rantzau, leader of the German delegation, was accompanied by Herr Landsberg, Minister of Justice; Herr Simonds, Director of Justice in the Foreign Office, and Herr Ganss,

Counselor of the Foreign Office. They were received by the Inter Allied committee on credentials, M. Jules Cambon representing France; Lord Hardinge, England; Henry White, United States, and Baron Makino, Japan. The interview was purely formal and lasted only five minutes. Count von Brockdorf-Rantzau was so overcome by emotion that he nearly fainted. The Germans are lodged at the Hotel des Reservoirs, as was M. Thiers when he came to Versailles to discuss peace terms with Bismarck in 1870.

**Fall of Munich Soviet** It was a question whether all Germany could be got together in time to sign the peace treaty, but on the day that the delegates presented their credentials at Versailles the troops of the Berlin Government captured Munich. This brings to an end the third revolution in six months.

Four days after the signing of the armistice the Bavarian Kingdom was overthrown and a republic set up under the dictatorship of Kurt Eisner, a radical journalist. On February 21,

#### A SPY WHO FOUGHT FOR GERMANY IN AMERICAN UNIFORM

If Mrs. James Gerard, wife of the former Ambassador to Germany, hadn't had an unusually good memory for faces Henry Bode, alias Herbert Wilson, might still be successfully pursuing his profession of soldier-adventurer-spy. But Mrs. Gerard identified him, when she saw him in this country in American uniform, as a man whom she had previously seen in Berlin wearing a German war cross. Investigation followed and Henry Bode was convicted and is now serving a ten-year sentence on Governor's Island. The story of his career of crime reads like a dime-novel thriller: Born in Wilhelmshaven, Germany, in 1877, he spent his childhood in Hawaii, went to San Francisco as a stowaway when he was thirteen years old, got to New York, and a few years later enlisted in the United States Navy. Worked as a miner in Butte, Montana, went to the Klondike after gold, made \$16,000 in a few months and gambled it away again in a few days. Went to the Philippines with a Montana regiment and later transferred to the United States regulars. Was married, deserted his wife, worked his way to China where he enlisted in the Russian army and served as a spy, escaping capture by the Japanese on one occasion by disguising himself as an old woman. After the Russo-Japanese War was over he served a while in the Philippine Constabulary, came back to California and enlisted under Madero in the Mexican army, becoming before long a lieutenant-colonel. When the United States declared war against Germany he enlisted in our army, but deserted at Fort Bliss, Texas

Eisner was assassinated by Count Arco-Valley, who was at first beaten and later taken from the hospital and lynched by the populace. The effect of this attempted counter-revolution was to drive the country in the radical direction, and finally on April 7 a Soviet government was set up in Munich, the Bavarian capital, by the Spartacans under the guidance of Bolsheviki leaders. The movement, like others in Germany and Austria-Hungary, was financed from Russia, where the Soviet presses are busy printing not only Russian rubles but also German fifty-mark bills, English pound notes and other counterfeit money which cannot be distinguished from the genuine currency.

But Premier Hoffmann, who had the support of the Bavarian Diet meeting at Bamberg, refused to give place to the Soviet, and his Government was recognized by Prussia, Baden, Württemberg and other German states. The German Minister of Defense, Gustav Noske, is proving himself a man of power and determination, and without hesitation he undertook the siege of Munich. The Soviets of other Bavarian cities were overthrown and the capital was completely encircled by Noske's troops. This shut out food and fuel from the city. The Communist forces were driven out of the suburbs by hard fighting and by the end of the month Munich was regained.

Both sides resorted to reprisals. The Communists seized prominent men and threatened to execute them unless the Government troops stopped their advance, but the city was in their hands before all these hostages had been shot. Among those who were executed before they could be rescued were Prince Albert of Thurn and Taxis, Prince von Wrede, Professor Albert Döderlein, of the University of Munich, and Countess Westarp. In retaliation for this all the Communist leaders are being executed whenever they are found. In the taking of the city 250 persons were killed in the fighting or executed afterward, and 5000 put in prison.

**May Day Riots in Paris** A general strike on the first of May closed up all places of business, including restaurants and drug stores, and shut down all transportation. Crowds gathered in the streets and squares singing the Internationale and waving red flags. The police and military attempted to disperse them and numerous conflicts occurred. In the Boulevard de Magenta three barricades were erected by a mob of 20,000. In the rue Royale the cavalry charged the crowd and drove it back toward the Madeleine, trampling over men and women. Of the policemen 428 were injured, 12 of them severely. More than 200 civilians were hurt, 28 of them severely. Three persons were killed. The Socialist journal *Humanité* calls the day "a magnificent demonstration of the power and discipline of the laboring classes and marred only by the brutality of the ferocious police." On

the other hand the Prefecture of Police claims credit for handling the disturbances tactfully and without the use of ammunition by police or troops.

In Berlin also the strike was general and labor meetings were held, but there was no serious disorder.

**Settlement of Kiao-Chau** As was explained last week, the question of the disposal of the German concessions on the Shan-tung peninsula was settled by a compromise which was sufficiently satisfactory to Japan to induce the Japanese delegates to withdraw their demand for a racial equality clause and to forego their threatened retirement from the Conference. But the Chinese feel that they have been grievously wronged by the settlement, for, as they say:

It is clear that the Council makes China lose both ways: it has given to Japan not only more than Germany had in Shan-tung but also more than Japan claimed in the treaty of 1915 and in the notes of 1918. The Council's proposed settlement seems to sanction, for example, the policing of the Shan-tung railway—a privilege Germany did not exercise or claim—and, it is apprehended, substitutes a permanent Japanese settlement under Japanese control and administration for a German leasehold limited to a fixed period of years.

When the draft of the treaty was first read to the full assemblage of delegates at the secret session of May 6 the Chinese Foreign Minister, Lu Cheng-hsiang, presented a formal protest against the decision of the powers, which, he said, was made without regard for justice or for the territorial integrity of China.

On the other hand, the Japanese jingoes are bitter against the United States for its anti-Japanese legislation and for checking Japanese aspirations in China and Siberia. Some of the Japanese papers call Wilson the "man with the voice of an angel but with the deeds of a devil," and say that the Americans are more barbarous than the Germans in their treatment of Japanese in the United States. Americans are accused of inciting the Chinese to publish the secret treaties of Japan and of sympathizing with the Koreans in their movement for independence.

Baron Goto, formerly Minister of Foreign Affairs, states the Japanese position in this way:

The so-called secret treaties entered into in 1917 between Japan and her allies, recognizing her right to inherit German rights in Shan-tung, were nothing but a step toward the fulfillment of that pledge which she had given China in the agreements of 1915. In the judgment of the Japanese Government it was necessary for Japan to establish an undisputed right over the German territory before she was in a position to restore it to China. Now that the Peace Conference has granted Japan's wish I have not the slightest doubt that the Government of Tokio will take steps without delay toward the restoration of Kiao-Chau to China.

**Extraordinary Session of Congress** Congress is to meet in extraordinary session on May 19. The President has called the call, and will probably lay before the new Congress in the same way the matters to which he wishes to direct its

Handing in Brooklyn Daily Eagle

"THE VOICE OF THE SMALL PEOPLES"

attention. He can hardly leave the Peace Conference at the present stage of its activities.

The most important function which the new Congress has to perform is to pass the appropriation bills for the coming fiscal year which failed of enactment when March 4 automatically brought the last session to a close. The bills aggregate nearly three and a half billion dollars, and include the Army, Sundry Civil, Railroad, Navy, Agriculture, Deficiency, District of Columbia and Indian appropriation bills. The largest is the Army bill, which carries a billion dollars of appropriations.

The new Congress will have a Republican majority in both Senate and House. This is an anomaly which cannot exist in any of the great nations of the world which have the parliamentary form of government as distinguished from the presidential form. In England or France or Italy or Japan the chief executive or premier must be of the same political party as the majority in the parliament. But here we have a Republican Congress and a Democratic President. It is a situation which, without considerable skill and broadmindedness on both sides, may lead to nothing but mutual obstruction and failure to accomplish anything.

**Getting the Boys Home** On the first of May nearly one-half of the American Army that was in Europe when the armistice was signed on November 11 had sailed for home. When the fighting stopped there were 2,200,000 Americans "over there." At the end of last month there were a few more than 1,000,000.

The boys are being brought home with all convenient speed. In fact, the stream is flowing this way faster than was believed to be possible. The War Department had expected to bring back 255,000 in April; but when the last transport of the month was loaded the figures had grown to 287,595.

In the meantime a smaller stream is trickling the other way. Since the vol-

untary enlistment of men for the army was begun a little over two months ago, more than 23,000 have enlisted, of whom over 6000 have asked for duty in France.

**Mapping Out the Airways** In building a railway system the first thing needful is to secure the right of way over which the tracks are to run. In planning an airway system the first thing to do is to secure the ground for the terminals from which the aeroplanes are to start and at which they are to alight.

The Army Air Service is already setting about securing the ground for landing fields at strategic points in all parts of the country. The service has asked thirty-two cities and towns to provide the necessary space for the establishment of landing fields and air route terminals. The places first selected were chosen for the position they must take in any organized system of national air lanes. The thirty-two municipalities approached by the Air Service are these:

Alabama:	New Mexico:
Mobile	Columbus
Arizona:	New York:
Phoenix	New York City
Tucson	Albany
Yuma	Buffalo
California:	Syracuse
Bakersfield	North Carolina
Fresno	Raleigh
Florida:	Ohio:
Daytona	Cleveland
Kissimmee	Columbus
Georgia:	Oklahoma:
Macon	Oklahoma City
Atlanta	Pennsylvania:
Augusta	Uniontown
Illinois:	South Carolina:
Chicago	Columbia
Louisiana:	Texas:
Baton Rouge	Beaumont
New Orleans	El Paso
Massachusetts:	Flatonina
Boston	Texarkana
Missouri:	Virginia:
Kansas City	Richmond

The statement issued by the Air Service to the municipal authorities of the places involved presents the matter thus:

No field should be proposed unless it is capable of expansion, for the air service is looking ahead to the day when aerial navigation will challenge the older means of transportation, and it is insisted that municipalities give thought to the future. The development of aviation in the United States will be along both military and commercial lines. The Air Service, although concerned primarily in the military phase of aviation development, nevertheless is vitally interested in cooperation with and assisting any other legitimate agencies which are engaged in aerial activities. Foremost among these is the Post Office Department, which now finds it necessary to establish thruout the country terminal or way stations for its aerial mail deliveries and which is jointly associated with the Air Service in presenting this project to the attention of your municipality.

The establishment of landing fields thruout the country, thru cooperation between the Government agencies and the cities concerned, will certainly operate to the advantage of both the Government and the city, because in the rapid development of commercial aviation those cities which have provided the primary facilities for operation of aircraft in their vicinity will have paved the way for local benefits resulting from the development of aerial inter-city transportation, express service, mail service, emergency service and local photographic mapping or aerial protection.

### THE CONQUEROR OF THE AUSTRIAN

*General Caviglia, since the armistice the Italian Minister of War, was in command of the Eighth Army, which last October drove the wedge into the Austrian front on the Piave, split the enemy's forces in two at Vittorio Veneto, and led the way to the final overwhelming victory of the Italian arms*

# ITALY, AMERICA AND THE Y

BY LIEUTENANT-GENERAL ENRICO CAVIGLIA

*A message from the Italian Minister of War to the Associate Editor of The Independent, who for seven months was Regional Director at Florence of the Y. M. C. A. working with the troops of the Italian Army.*

ON the occasion of your departure from Italy after the completion of the most noble task that your country had entrusted to you among us, pray accept the cordial salutations and the sincere thanks of an ardent friend of the Association in which you have held in our country so important a position. You have brought among us for the development of your beneficent work sentiments of sympathy for the Italian people, engaged in a most bitter war with all their still youthful energy; sentiments of human and political solidarity with all the combatants in the good cause. We shall not forget it, as Italians and as men! We shall not forget it, especially those of us who, from conviction and from experience as soldiers and as commanders, are profoundly persuaded of the high importance of moral factors in preparing the fighter for his task, rendering him capable of performing it, and making him deserving of victory. I have always been persuaded of this truth in highest measure; and I have always applied it in practise. They are necessary things for waging war, rifles and cannon. But dominating everything, giving point to everything, is the spirit of the fighter. Victory is won by nothing but the spirit.

Now, your association has worked precisely to improve this spirit of our fighters. I know something of it of my own knowledge, as commander first of the 10th Army and then of the 8th, the army to which fell the lot of playing so decisive a part in the battle of last October and November. Your association has come close to our men. It has received them in its hospitable huts; it has put into their hands books, magazines, beautiful pictures; it has enabled them to correspond with their distant families; it has satisfied, to the fullest extent possible, their innate passion for music, it has brought to birth and nourished in them a desire and a liking for athletic sports. I do not hesitate to recognize in this work of yours a precious aid to this high morale of our soldier, which has permitted him to give, especially in this last year, the highest proofs of himself, decisive for our war and for the war of the other Allies. All recognize it as I do, in that part of the army under my command and in the whole army. You know with

how much sympathy our forces last summer welcomed the arrival of your first battalions. They did not appear to our eyes strangers, but neighbors and almost compatriots. Among the American soldiers were many Italian by origin, among the Italian soldiers very many who knew America, had lived there, worked there, were bound to your country with strong bonds of friendship and relationship. A document written by my propaganda office, published and distributed in September, 1918, which set forth the reasons for the American intervention and showed what especial value it had for us Italians, met with wide approval in the 8th Army. There was held, among our soldiers who had been in America, a kind of referendum or prize contest on these questions:

"In what consists the greatness of America? Why have the Americans been unwilling to submit to German arrogance?"

Nearly a hundred of our Italian-Americans responded, and from these responses was made a summary, which was also published and distributed among the troops. From this there sprang out into clear outline the picture of an America built up of work and the appreciation of work; of an America, country of liberty and at the same time of orderliness, because each one is obliged to observe and to compel the observation of those laws which he himself has had a share in making; of an America, in point of fact, capable now of exerting a prodigious force and of assuring victory for those people with whom it was fighting side by side.

Also, in this way, that is in the sense of security and confidence that it diffused among us, America contributed to our victory, as France and England contributed to it, a contribution of moral even more than of armed force. But, let me repeat, is not the spirit, highly tempered, refined as in a furnace, infused with faith, not only a weapon in itself, but indeed the greatest, and the most essential to victory?

Once more, dear sir, thanks; greetings, and good wishes to you, to your fellow workers in Italy, to the whole American people who emerge now more than ever before in the world among the beneficent forces of history.

## PUTTING THE Y IN ITALY

BY HAROLD HOWLAND

LATE REGIONAL DIRECTOR OF THE Y. M. C. A. AT FLORENCE

THE little stenographer was feeling the bitterness of disillusion. She had come overseas to do her share of a glorious work of international friendship. But somehow she didn't feel a bit glorious. Rome, Italy, wasn't a bit nearer the war than Scranton, Pennsylvania. Her typewriter was just as tiresome a taskmaster in that little office on the Via delle Quattro Fontane as it had been in that other little office on Main Street. Besides it had an Italian keyboard, with the Q where the A ought to be and other absurd and inconvenient transpositions. But what was worst of all, her fellow-workers, from her own particular "boss" up and down, were just as stupid and fallible and human as if they had been at home instead of three thousand miles nearer the battle front of democracy. Sometimes she thought they

were inhumanly human. Her bitterness bubbled up and erupted.

"When I sailed from New York," she flung off, "no crusader had anything on me! But now—" The little stenographer's powers of expression were unequal to the occasion. She fell upon the unoffending keys again and hammered out, "In qnswer to the auestion you qsk —." She didn't care. No keyboard had any right to be made that way!

The little stenographer was not the only disillusioned crusader. In fact she "hadn't anything on" a considerable majority of the workers of the Y. M. C. A., the Red Cross, the Knights of Columbus, the Y. W. C. A., the Salvation Army, and, indeed, of the whole A. E. F. itself. War, to make the world safe for democracy, is a glorious crusade when you are embarking on it three thousand miles away. But it is in-

tensely human and blundersome and plodding and exasperating when you are living with it on the spot.

It is particularly exasperating when the letters begin to come from back home saying, "I'm so glad I didn't enlist with the Y. The stories we are getting back here about the way things have been handled over there are distressing." It is worst of all on the steamer coming home, when the idle hours of the long monotonous days are filled with gossip of all the senseless, vicious, selfish, wasteful, hopeless things that rumor has credited to your own particular organization—and incidentally to all the rest. You had hoped to be able to come back home with a little warming spot of justifiable pride tucked away somewhere because it had been your fortune to have the mystic letters U. S. and Y. M. C. A. on either side of

Each morning at a briskly early hour our two athletic men put on for the soldiers gymnastic work and athletic games"

your collar. But before the voyage is over you wonder if you are not really a cross between a bank embezzler, an oppressor of the poor, a defaulting trustee, a spendthrift, a fool and a knave. But ocean voyages are like that.

Then, some day, you sit down and go over in your memory the things that you saw and experienced and knew about over there, and your self respect begins to stiffen its backbone a little. Finally you find your perspective straightening itself out; and the conviction comes back to stay that, whatever mistakes you yourself may have made and however many the individual failures here and there among your fellow "crusaders," on the whole the job was well done and in the aggregate the service rendered by your organization was valuable, effective and not unworthy. Then it seems worth while to sit down and tell your fellow-countrymen a plain story of the things that you saw and had a part in, not with the thought of defense or excuse, but by way of rendering an account of your stewardship. So here is the plain story of "Putting the Y in Italy," or, to be more precise, "Putting the Y in Tuscany," for that is the story that I know of my own knowledge.

The mission of the American Y. M. C. A. with the Italian army was exactly the same as its mission with the American army, the upbuilding and preservation of morale. Its methods were, broadly speaking, the same, but with certain not unimportant differences imposed

by the very nature of the case. The Italian soldier, strange as it may seem, speaks Italian; the usual Y man does not. It does make a difference. In the work with the Italian army the Y was continually hampered for lack of personnel; so that the regular Y plan of having a Y man behind the desk of every hut and always at the disposal of the soldiers of the unit the hut was serving could not be applied in Italy. We could not have canteens in the huts in Italy, since our agreement with the Italian authorities forbade the selling of anything to the soldiers. Finally the Y man and woman did not represent, as he and she did in the A. E. F., the folks back home. They belonged to an alien, tho an allied people. These were obstacles, but not insurmountable barriers. They merely demanded the modification of plans and methods.

In Florence we were far from the front. Our work was with soldiers in reserve and in training, who lived in barracks, with the sick and wounded in hospitals, and with troops in transit by railroad. There were plenty of all classes; and the sixteen Y men and two Y women whom we had on our regional staff found little difficulty in keeping busy.

Y activities, as every one knows, center in the Y hut. It is an institution known to every American soldier from the Golden Gate to the Rhine—and now beyond. In Italy the hut was translated into the *Casa del Soldato*, the Soldier's Home. It consisted of a room provided by the military authorities—we did not build our *Casa* (the plural of *Casa*, pronounced in two syllables) except in a few isolated spots on the front—furnished a coöperation by the army

and the Y, and provided with supplies by the Y. A piano, a gramophone and records, writing paper, postcards, pens and ink, books and illustrated papers, and games gave to the soldier the means for the four stock occupations of his leisure time—music, reading, game-playing, and the letter home. We put a *Casa*, provided with these aids to diversion, into each of the barracks, something like a dozen of them, in Florence, and into thirty or forty in other towns and villages thruout the surrounding parts of Tuscany. Every evening would find the *Casa* filled with the Italian soldiers of the regiment or detachment, enjoying the opportunities for recreation and

A camouflaged Y hut that was maintained on the Italian front, near Mt. Grappa. It is portable and was later moved to Genoa

In Italy the Y "hut" was translated into "*Casa del Soldato*," the Soldiers' Home. It consisted of a room, or building, provided by the military authorities, furnished by the army and the Y, and provided with supplies by the Y—a piano, writing paper, books, games, etc.

"Altho not instinctively athletes, the Italians took kindly to American teaching, and grew enthusiastic in games and exercises"

social fellowship as keenly and as appreciatively as ever any American boys did those provided by a hut in a training camp at home or behind the lines over there. The games which the *soldato*—the counterpart of the doughboy, Tommy Atkins and the *poilu*—eagerly received from our hands were dominos, checkers, tombola (a game exclusively and characteristically Italian, something like the lotto of our childhood) and jig-saw puzzles. The providing of the vast supplies of these games needed thruout the Italian army is another part of our Tuscan story.

In the hospitals, of which there were some three score in Florence and its immediate neighborhood, we supplied the same raw materials of diversion and letter writing, to say nothing of such semi-athletic games as ring-toss and shuffle-board as played on steamer decks.

In every barracks and hospital we aimed to give entertainments just as often as we could get around. Two moving picture machines, each with its portable cabin, and its Italian crew of operator and assistant, slipt from hospital to barracks, from barracks to hospital, day after day in our faithful Ford *camioncino*. We had found the Ford in possession of an Italian friend up toward Fiesole, and had removed the somewhat dilapidated body to make room for a camion body made to our specifications. The films came from America, where they had been fitted

with translated Italian captions by the Community Motion Picture Bureau, to whose capable hands the management of the Y's picture show business on both sides of the water was entrusted. Their management was of the most efficient—when the U-boats didn't send the films to the bottom, or the overtaxed railroads mislay them in transit.

A Y man always turned up at the picture show to do the honors and to match, in so far as American good will and friendliness could accomplish it, the splendid courtesy with which every smallest act of American generosity was received by the Italian army officers and the hospital authorities. The colonel and the lesser officers of the regiment always made it a point to be present at least at the beginning of each performance; and the warmth of their gratitude was unfailing.

The picture shows were alternated with concerts by our own entertainment company. It was under the direction of a Y man who had been Italian until he became American and a young American girl, the sister-in-law of an Italian Marchese, who had made for herself a career in Italian opera in its home land. The company had two or three standbys—a *prestigiatore*, who could do all the usual marvelous things with eggs, silk handkerchiefs, canaries, coins and inexhaustible cordial bottles; an operatic tenor and basso; and a singer of Neapolitan folksongs, himself a *soldato*; to say nothing of the American girl herself, who sang operatic arias and,

with the basso or the tenor, duets, and played accompaniments for any or all the others. From time to time the regular members of the company were supplemented with other artists who were delighted to volunteer their services, not only because it was for the Italian soldier but because it was for the American Y. For the Y was immensely popular in Italy. At several concerts the famous tenor, Bassi, well known to Metropolitan audiences, appeared; at others Emma Gramatica, one of Italy's foremost comedienues; and an indefatigable ally and constant friend of the Y was the dramatic reader and impersonator of world wide fame, Ugo Biondi. There was never a lack of the finest kind of talent; and it surely needed the finest kind of talent in a country where each soldier seems to carry, if not a marshal's baton in his knapsack, half a dozen opera scores in his head.

The concerts were sometimes held in one or another of the theaters of Florence, which were thrown open by the Y, with the cheerful coöperation of the theater managers, to the soldiers of the city, with the commanding general, the Prefect, other officers, civil officials and prominent Florentines in the boxes.

There was one drawback to our usual entertainments, whether they were pictures, shows or concerts, when held in the hospitals. The fellows who could not leave their beds, and therefore needed the diversion most, could not be present. It is true that at every concert the foreground [Continued on page 266

A Y show in a hospital courtyard at Modena, Italy, with as many patients as could move clustered around or hanging out of the windows. Concerts and picture shows and magic took turns, too, in keeping entertainment going in the barracks and hospitals

Mr. Auerbach and Mr. Mayer have both worked along the editorial lines of the Americanization problem and Mr. Auerbach has for many years been engaged in special investigations of immigration for municipal, state and federal authorities.

**I**F he has not voluntarily renounced his claim to protection from the United States or violated a law and thus arbitrarily removed himself from the sphere of that protection, is an American citizen always an American citizen?

Yes! would be the instinctive and decisive answer of most Americans to the question; but those acquainted with the actual situation would hesitate to say just when an American citizen, a law-abiding one, too, isn't one.

Men who have made a study of the naturalization problem see in the situation one of the important items to be discussed on the program of reconstruction which will very likely be lying before the Peace Conference when this article appears in print.

Our own country has a peculiar interest in seeing that this situation is brought to the fore and boldly faced—something which many administrations have been chary about doing, for, to speak frankly, we are perpetually on perilous grounds when we speak about Americans as men and women born or naturalized in this country. This is not the view of some of the most powerful nations. From the beginning of international relationships, there have been two contrary conceptions of what constitutes citizenship. Where the United States has always maintained that *jus soli*, or the law of the land, is the correct conception, ordinary European civil law codes follow the *jus sanguinis*, or law of the blood.

"Once a Roman, always a Roman," said the old Roman law in effect, thus establishing the law of the blood. According to this law a person's nationality or citizenship depends on the citizenship of his parents. While in certain respects the United States has admitted the validity of this law, the general citizenship theory running thru our history is based on the law of the land, according to which a person takes

# MY COUNTRY? 'TIS AND 'TISN'T

*These 2600 Americans who fought with the British army were classed as aliens when they came back to New York on the "Mauretania" a few weeks ago and were detained under armed guard by the immigration authorities until they went thru the form of taking out citizenship papers. Most of them were men of long standing as American citizens who volunteered before America entered the war*

the nationality of the land in which he is born and thereafter is free to change the status of his citizenship in compliance with his desires. How much this view is distinct from the view entertained elsewhere is illustrated in the dictum—set forth by a government now overthrown—which is in effect, however, the attitude of many other powers today. Adolph Lipsyc, a naturalized American citizen, who returned to Russia, was prosecuted by the late Imperial Russian Government for having thrown off his allegiance to the Little White Father and all he represented. The American Ambassador took up the case and received as a portion of the reply of the Russian Government the following passage:

The relation of the state to the subject or citizen is the exclusive domain of the internal legislation of every country which alone has the right and the power of loosening or tightening the bonds that serve to hold its subjects or citizens, according as it may judge fit or necessary for the public welfare in general.

Of the laws of the past which bind men, it is not the liberal statutes of the early Attica which remain, but the Prussian mandates of the militarists of the City of the Seven Hills.

challenge, as a few instances to be related will show.

First, in the majority of those countries the governments do not recognize the right of their citizens or subjects to change their nationality except after serving their full military service, and then, only with the permission of the government—permission which is not readily granted. There have been many clashes resulting from the confused status even of men born and raised in the United States and who have returned for a visit to their father's native land. That our own Government realizes the seriousness of the European attitude is shown in the mild part it has played on several occasions when the point of citizenship was raised. In several cases of so-called "dual citizenship" citizens of this country were forced into the armies of alien nations in 1914, from the very nations from which, perhaps, they had emigrated to escape into the larger personal liberties of America. Close on the impressment of these men, William Jennings Bryan, then Secretary of State, issued the following orders:

The United States is not a party to any treaties under which persons of foreign birth residing in [Continued on page 263]

France, Italy, Bulgaria, Greece, Turkey, Persia, Rumania, Serbia, Switzerland and the Netherlands are countries with which the United States has no naturalization treaties. Such treaties are in existence with other countries, and they are often called "the Bancroft treaties," passed mainly in the years between 1868 and 1872. It is not insignificant that these treaties came into being as a result of troubles arising from the heavy Teutonic emigration of that period, the changes of nationality after the Franco-Prussian war, and so on. The only treaty of later date than 1873 is the one with Haiti. In 1870 there were about 5,500,000 foreign-born in this country; today there are not less than 13,000,000, and 32,000,000 for foreign-stock of recent generations. And many of these come from those countries which are diametrically opposed to our conception of citizenship, and which they have not hesitated in the past to

## GOING OVER AGAIN

*The first 1000 men of the relief army of 50,000 volunteers to be sent to Europe to relieve the American Army of Occupation sailed May 7 on the "Agamemnon." Half the 50,000 have already enlisted—a considerable proportion of them men recently discharged from previous service*

COLONEL JACKSON AND CORPORAL JACK

*The colonel is in command of the first thousand men of the overseas relief army. Corporal Jack Tyler (standing) is one of his youngest and most famous volunteers. He has served three years with the British army and has earned three successive wound stripes. Now he is going back to put the finishing touches on his hat. Behind Corporal Jack are two more ex-British soldiers, who are going back as American volunteers: Sergeant Williams, who served twenty-six months with the Canadian Grenadiers, and Sergeant Creagh, who served with the Anzacs twenty months*

#### CLEVELAND'S MAY DAY RIOTS

*The Socialists of Cleveland celebrated May Day with a demonstration that resulted in a casualty list of fifty to a hundred. There were two riots: the chief one in the streets thru which the Socialists tried to parade with a red flag. Bystanders joined in a counter attack and the mounted police had to restore order forcibly. C. E. Ruthenberg (left), the Socialist leader, was arrested and a mob stormed police headquarters for his release.*

Press Illustrating

Underwood & Underwood

*The second riot was at the Tom Johnson monument in the square where two ex-soldiers hoisted a red flag over the speakers' stand. Other soldiers and civilians in the crowd rushed the stand and after a fight hoisted the Stars and Stripes in its place.*

COMMANDING THE HOME FORCES NOW

*This photograph of Field Marshal Sir Douglas Haig with his wife and daughters was taken outside his home just after his return from France to take command of the British Home Forces. He led the British troops on the western front throughout the war*

**T**HE Salvation Army went overseas as quietly, as unobtrusively as it had always worked in the dank, unwholesome alleys of the slums. There was no extraordinary solicitation of funds to support the new activity. The soldiers of the American army who took over the first American sector in France came out of the trenches to find the Salvation Army workers awaiting them and had not the slightest idea why they were there. And the Salvation Army, using exactly the same methods which had aided the unfortunates of more than sixty countries, set to work to help the soldiers. What the few simple services which the Salvationists believed would be welcomed by the soldiers, accomplished, has already been told by more than 2,000,000 doughboys. The distribution of doughnuts and hot coffee, the mending of clothing, the simple entertainments, the "mothering," as Commander Booth recently called it, brought the Salvation Army into world-wide attention almost overnight.

From the humble private soldier, who is ready to all but deify the patient, bright faced girls who wore the Salvation Army uniform abroad, to General Pershing himself, nothing but praise is heard of the Salvation Army's war service. The commander of the American Expeditionary Force cabled to Commander Booth his appreciation of the value of the Salvation Army's efforts in maintaining the morale and spirit of his men: "The outstanding features of the work of the Salvation Army have been its disposition to push its activities as far as possible to the front and the

trained and experienced character of its workers whose one thought was the well-being of the soldiers they came to serve. This has resulted in a degree of excellence and self sacrifice in the work performed which has been second to none. It has endeared your organization and its individual men and women workers to all those divisions and the other units to which they have been attached and has spread their good name to every part of the American Expeditionary Forces."

Just as enthusiastic as General Pershing is Cardinal Gibbons, who wrote recently of the Salvation Army: "Along with my fellow American citizens I rejoice in the splendid service which the Salvation Army rendered our soldier and sailor boys during the war. Every returning trooper is a willing witness to the efficient and generous work of the Salvation Army both at the front and in the camps at home. I am also the more happy to commend this organization because it is free from sectarian bias. The man in need of help is the object of its effort, with never a question of his creed or color."

And the Salvation Army was properly astonished, altho by no means unduly excited, by this encouragement and praise. Commander Booth expressed the attitude of the Salvation Army with regard to the "popularity" which its war work brought it when she said:

"For more than fifty years the Salvation Army has been doing just what it did in France, all in the same spirit and manner, but you did not happen to hear of it, perhaps, or, if you heard of it at all, the work did not impress you as

monumental. I seek to correct the very natural and now widespread idea that the Salvation Army, in the great war just ended, 'accidentally' hit upon a new and novel method of making itself useful, and in consequence stumbled headlong into a pool of 'popularity.'

"For half a century we have been wiping the blood from the faces of men who fought—not in the fight that military rules countenance on a picked field with a known enemy, but in the still more deadly and insidious contest that rages in all communities among the poor and lowly where desperation, resulting from sheer privation, drives men and

BROWN

women to extremes. Before the men of the American armies in France were born, the Salvation Army was scraping the caked mud from the feet of faltering women who had fallen in the fight of life, and was carrying milk and food to starving families just behind the cold, gray walls of society's financial ramparts in the great cities. It did not need a war to create the establishment of the rescue homes, the day nurseries, the lodging houses for down-and-outers, the orphanages, the fresh air farms, the free clinics, the departments of service for men from the penitentiaries, the slums, settlement bureaus and homes for the helpless aged."

An Italian boy who earned two wound-stripes with the American troops that helped break the Hindenburg line faced a Salvation Army lass who was giving out doughnuts and hot coffee to some just-landed men on a Hoboken pier one day last week. The New York Sun tells the story: "'Say,' he burst forth with his mouth full of doughnut, 'is that club you had for mothers at 94 Cherry Street still goin'? 'Cause if it ain't my mother is sure awful lonely. She started goin' there when she couldn't speak no English hardly, and it was about all the sociability she had, those meetin's of yours. My mother ain't much to write, so I didn't hear nothin' while I was on the other side about that club o' yours, and I says to myself, says I, 'It's sure a pity if, seein' all they're doin' for us boys, the Salvation Army has had to give up what they done at home.'"

"'The Club's flourishing, and so's the settlement-house and the kindergarten and everything at 94 Cherry Street,' the worker answered, and a happy grin welled up under the perspiration on the lad's face as he hitched his haversack and tin hat and other burdens to a more comfortable position and passed on with his pals.

Despite the war the activities of the Salvation Army in sixty-three lands continued uninterrupted last year. Even in the United States, where the war work depleted the Army's forces and finances, its work was conducted on a larger scale than ever before. The 2918 officers and cadets of the 957 corps and outposts in the United States preached last year to more than

24,000,000 people. Its hotels sheltered more than a million and a half and fed 400,000. \*Almost 130,000 children found a temporary haven in its children's homes and 50,000 other children were cared for in its slum nurseries.

Now, while the Salvation Army in the past has been prone to shield itself from the praise of outsiders, the conspicuous success of its war work has brought with it new responsibilities. The people who have suddenly awakened to what a tremendous force for good the Salvation Army is, expect more of it. Realizing this, Commander Booth has determined on a program of expanded activities.

Local Salvation Army commanders in all parts of the United States were asked, "Just what would you like to do in the way of extending your endeavors in the future, and what will it cost?" The local heads were asked to make their statement of wants specific and not to generalize in their estimates of cost. The replies, carefully examined and audited by divisional and provincial officers, were received at headquarters and compiled; and it was found out that an expansion that would suit local needs in all parts of the country would cost just \$13,000,000. This amount the Salvation Army is going to ask the people of the United States to contribute in a campaign which will be conducted thruout the nation in the week of May 19 to May 26. For the first time in its history the Army is going to try to relieve itself of the necessity of obtaining support by the uncertain means of tambourine collections.

New York

Over here Salvation Army work has been following for half a century the same policy of meeting simple needs—coal, for example, during a hard winter in the slums

Window space in the modern office, especially in crowded districts, should equal half or more of the entire outer wall space. Here are some of the largest office buildings in lower Manhattan, all of which have devoted more than the 50 per cent minimum to windows

# MAKING OFFICES SAFE FOR BUSINESS

BY EDWARD EARLE PURINTON

**T**WO men were discussing business at their club. They were old friends, but they were not business competitors. They dared to talk freely because they were friends, and they dared to talk frankly because they were not rivals. Each had a large office to maintain, but not much else in common with the other as regards their commercial interests. Consequently their business talk was not colored by deceit nor obscured by subterfuge.

The first of these two men, Mr. A., was evidently prosperous and had the well-kept, well-satisfied appearance of an individual making the most of life and enjoying himself fully in the process. He was dressed in the height of good taste but not of style. He had a convincing personality, radiant, magnetic, powerful. He was the embodiment of good health and good spirits. Just looking at him made you feel better, and if you had money to invest you would take his advice.

The other man seemed to be a "goner," financially, socially and professionally. His coat was seedy and his conversation sad. You pitied him, but could not cherish a deeper sentiment concerning him. And you wouldn't trust him with a dollar you ever hoped to see again. This poor fellow we will call Mr. B.

When these two friends shook hands in the club the greeting of Mr. A. was the common salutation of an American male person of the twentieth century—"How's business?" Nobody ever asked Mr. A. that question—before it was asked it was answered by his appearance. But Mr. B. had several times been accosted thus during the evening, especially by those club members who happened to be his creditors, and the fateful significance of the oft-repeated question caused him to break forth in

words of equal truthfulness and bitterness. He knew that Mr. A. was close-mouthed, and he had to get the spleen out of his system. He poured forth a torrent of complaints, like a muddy river that has broken its banks.

"Everything is going downhill. I never worked so hard with so little to show for it. We can't fill orders promptly. Clerks have to work overtime every night—and we can't afford to pay them. Customers find so many errors in our bookkeeping, mailing and shipping departments that it takes me a couple of hours a day just to straighten them out. Nobody seems to take any interest in the work at the office. Nearly every day somebody lays off on account of illness. I try never to overload our clerks, but a lot of them complain of being tired out. Can't get a decent stenographer for my own work. Each is worse than the one before. The girl I have now is slow as molasses and sour as vinegar—a combination to drive a busy man crazy. Our different departments don't seem to articulate or harmonize; petty quarrels, jealousies and fights are in the air and they break out on the slightest provocation. I thought of firing every employee and starting with a new bunch—the ones we have seem incapable of doing the kind and amount of work I insist on having done. If we don't revolutionize things we are due to fail about year after next. I'd give a hundred dollars to know where the trouble is and a thousand more to find a guaranteed cure."

Mr. A. thought a minute. "Would you?" he asked. "Sure I would," came the answer. "What you need, old man," continued Mr. A., "is a business doctor. You can't cure yourself of an acute business disorder any more than you could cure yourself of

pneumonia or inflammatory rheumatism. Call in a specialist, allow him to examine every department, function and feature of your business organization, then secure an efficiency analysis and diagnosis covering the case. In less than a week you should drop forever the biggest part of the load of worry you are carrying."

"Much obliged for the advice, but I don't take much stock in these newfangled ideas. How can a man from the outside tell me how to run my business? And," remarked Mr. B., "I can't pay the fancy price that any sort of expert demands."

"Do you trust me \$100 worth? Didn't you say you would pay that much gladly for the knowledge of the cause of your troubles? A first-class efficiency engineer charges about \$100 a day for his time. He could in one day locate many of the diseased spots in your business. I look prosperous today, and am prosperous. Why? Because I had enough horse-sense a few years ago to consult an efficiency engineer when our office got in as bad a condition as yours manifests now. The engineer spent a couple of weeks on the job—we made him tell us how to cure the trouble when he put his finger on it. But the increased profits in the next year paid back more than ten times the fee of the business doctor. And I know of many similar cases. At different times we have consulted a number of these efficiency engineers and always with good results. I will send you tomorrow the names of some of the best ones, and if you ever take a tip from a friend you'll get busy."

The efficiency engineer was called. In a single day he located enough blunders, wastes, defects and deficiencies to rob the concern of its legitimate profits for a month. About 75 per cent of these troubles

# "FIREWALL" CABINETS

Everything lost but the records filed in "Y and E" Fire-wall Cabinets—this was the experience of The Marine Equipment Company of Norfolk, in their recent \$100,000 fire. The blasting heat that welled in through the windows behind the cabinets could not penetrate the Fire-wall Construction.

## They Cost No More Than Ordinary Cabinets

THE surprising thing is that we can sell "Y and E" Fire-wall cabinets at prices to meet the competition of the better grades of ordinary files.

These are the *only* cabinets built like safes—with double steel walls, insulated with asbestos, all around, to neutralize the effect of heat on steel.

In the event of fire and in every day use, they will serve you *well*. They are *more* than supremely protective receptacles for storing papers—"Y and E" indexing systems transform them into machines for making the papers *easy to find*. Our System Service is given without charge.

*Write for free booklet "Vertical Filing Down to Date" in the new (7th) edition, and "The Only Cabinets Built Like Safes."*

## THE AMERICAN BOY

"The Biggest, Brightest, Best Magazine for Boys in all the World"

WHEN your boy was a baby, you hoped he would always be surrounded by the best character-forming influences. Remember this now, as the world lies open before him. In his reading especially he needs the sound, manly material published regularly in *The American Boy*—a magazine that is a positive power in developing America's boyhood.

More than 500,000 read it eagerly and regularly. Give your boy this inspiration and this advantage. He needs it as he grows. Buy it at the newsstands, or subscribe for him. \$2.00 a year—20c a copy.

The Sprague Pub. Co.  
4 American Bldg., Detroit, Mich.

lay in the office, or in departments of the business controlled by the office. Yet the office manager and a score of the company officials whose work had to do with the office had never imagined the existence of these faulty conditions, merely because they had never been trained to analyze business method, policy, personnel, equipment and environment from the new scientific standpoint. The efficiency engineer told Mr. B. hundreds of things of benefit to the concern, and a few of these we quote

"YOUR production is low and cost of production high," the engineer said, "because you run your office twenty years behindtime, and your up-to-date competitors will outwork you and undersell you until you adopt efficiency methods equal to theirs. Your employees are handicapped by working conditions so poor that the best employee would make mistakes and lag behind, no matter how hard he tried to serve your interests. The modern science of office hygiene demands attention first.

"On cold days the temperature in different rooms varies at different times from 50 to 70 degrees or more, and this variation destroys the health and saps the vitality of your workers. The air is full of dust in the early morning. Your office boy hardly gets the sweeping done before the employees arrive, and they breathe germs enough before they are here five minutes to give them a dozen ailments apiece. Ventilation is not uniform, not sufficient and not hygienic; by the middle of the afternoon most of your people are filling their lungs with poisoned air, which clouds the brain, impairs nerves, reduces energy and demoralizes character.

The walls and ceiling of your office are dingy, dark, soiled, gloomy, slovenly, depressing. Your typewriters are the noisiest made. Your office furniture is not adapted to the need of the individual—one of your clerks is five feet six inches tall and another is six feet two inches tall, but they both work in chairs and over desks of the same height. Your drinking water is full of bacteria, and is hard enough to stiffen the joints and solidify the brain of any one who drinks the minimum required for health—six or eight glasses a day.

"A number of people use the same drinking cup, and if any one of them has a cold or sore throat or other disorder that may be transmitted thru the mouth, everybody else who drinks from the same cup takes a chance on going home sick. There are shelves and boxes containing all sorts of items which are allowed to go uncovered and which gather dust for anybody to breathe who handles them. The only remedy used for dirt is one cake of soap and a common roller-towel for an entire department—the remedy is worse than the disease. Every hour of the working day, somebody in your office breaks from one to thirty of the primary laws of health and psychology relating to health. How do you expect your employees to remain strong and well, full of energy and enthusiasm?"

Mr. B. did not answer this logical and reasonable question in a proper manner. He let forth a hot word. He was mad—just plain mad. How in blazes, he wanted to know, could an outsider who never learned a thing about his business tell him how to run it? The idea was absurd. He paid the engineer his fee and told him to get out. One of the hardest things an efficiency engineer has to overcome is the blind, cowardly, weak, inertia of the average man when called upon to face his own blunders. It takes a strong man to view with calmness, clearness and determination the exposure of his lifelong mistakes. And Mr. B. was not a strong man.

Mr. B. asked the opinion of Mr. A. re-

garding the efficiency analysis from which we have quoted. Mr. A. smiled when he read the report. "You want my opinion? Let me give you something better—my experience. I judge that 40 per cent of the mistakes and defects here noted were found in our own organization perhaps to a greater degree a few years back when we first called in a business doctor. Every point he mentioned was well taken. Our officials, caring more for their profits than their prejudices, threw their prejudices to the wind and made a clean sweep of the matter of reorganization. We have proved by statistics that every improvement suggested more than paid for itself the first year, and every year thereafter yielded a considerable profit. The right application of efficiency engineering in our office made the success of our company, your own good judgment will enable you to form an opinion of the value of the work to you if you develop it as already begun."

There was nothing to do but follow the advice. Persuaded but not convinced, Mr. B. commissioned the engineer to prepare a complete analysis of all departments and lay out plans and methods for such reorganization as would put the office on a modern footing in all respects. The profits went up, the costs went down, the worries disappeared, as Mr. A. implied they would. Results were so satisfactory that Mr. B. not only paid the engineer ten times what he originally expected to, but engaged him as a permanent counsel on a yearly retainer. The facts and suggestions below, applying to any office, are quoted from the complete report of the engineer. They should be studied by every office manager, worker, owner.

We have translated the technical terms and modified the professional aspects of the report into a popular presentation of the subject. We limit ourselves here to the section treating on office hygiene.

**H**YGIENE is the foundation of production. To do the most and best work of which he is capable, a man must not only be healthy and remain healthy in body and mind, he must also be guaranteed living and working surroundings and conditions to prevent or minimize the continual drawbacks and subtle dangers of the very civilization the man depends upon for his livelihood. The habit of working in a closed room is a perpetual menace to the worker's health, vigor, speed, accuracy, thoughtfulness, cheerfulness and endurance. Anything is bad for your body and mind if it cuts you off during working hours from the air, light, earth, water, invigorating forces of the sun, the ozone-bearing winds, the mild electric currents generated by contact with the soil. Microbes, worries, ailments, irritations, errors and disabilities are the penalty we pay for having deserted good old Mother Nature. These things do not start and do not flourish in the open. They result from the human habit of herding a lot of animals together in a stuffy, sickly, poisonous, venomous jail politely termed a residence, a hotel, a mill, a store, a factory, a church, a school or an office. A closed house is a hectic blotch on the face of Nature. We cannot remove the blotches, but we can reduce the hecticality of them. We can flood them with light and air, we can keep physical and mental poison out of them, we can make ourselves clean, healthy, strong, alert, exuberant, in spite of them.

Some years ago the offices of the United States Pension Bureau were badly ventilated and the time lost from work by illness of employees averaged 18,736 days a year; but when scientific ventilation was provided this number of lost days was reduced to 10,114, giving an annual savings of \$622 days. The New England Telephone and Telegraph Company found that during

**NEW YORK** **BERTHIERVILLE, P. Q., CANADA** **LONDON**

one winter an average of 4.7 per cent of the girl operators in a single exchange were absent from work on account of illness resulting from unwholesome air; but the winter after the company had put in a modern ventilating system at very slight cost, the daily percentage of workers' absence was reduced to 1.9. Would it not pay you to figure on this basis how much your lay-off period for the season would likely be reduced if your ventilating system were adequate, modern and effective?

The annual waste from spoilage by accident or error is a large item even in a moderate sized office. The destruction of materials and supplies, and the rectification of blunders in response to complaints by customers, clients or department heads, will usually be found on careful investigation a source of money loss both surprisingly large and unnecessary. Famous industrial engineers have proved that a steady supply of pure air and a guaranteed method of circulating it will provide safety for the work as well as for the worker. When a man's vitality is lowered by sluggish or impure air containing poisonous gases, vapors, germs, dust or smoke, he loses rapidity, clearness, alertness of thought and promptness, sureness, effectiveness of action. It is well known that in large mills and factories most of the worst accidents come late in the afternoon, when the air is the most thoroly poisoned and the brain of the worker rendered thereby dull, slow, irritable, careless, confused.

**A**NOTHER dead loss from bad ventilation occurs in the slowing down of work which factory and office managers observe continually during cold weather in the late afternoon. Workers who breathe fresh air all day do not become excessively and prematurely tired about the middle of the afternoon. They are fresh and keen till closing hours. A man who swallows even one small dose of poison has to go to bed and do nothing but get well. A man who breathes during five or six hours hundreds or thousands of doses of poison into the lungs from the atmosphere may not go to bed, but he feels like doing it and acts as tho he were on the point of it.

The census of the United States declares that two and a half times as many people die in March as in September from the so-called "bad air diseases," which include bronchitis, pneumonia, influenza, diphtheria, tuberculosis. And it is estimated by sanitary engineers that the absences and delays in American offices owing to periods of contraction and recovery in the case of these ailments which do not cause death, and of similar affections such as colds, catarrh, grippe, tonsillitis, chills and fever, headache, are five times as great in the winter period of bad ventilation as in the summer period of good ventilation. Don't accuse an office worker of being lazy, careless or behindhand till you make sure that the air you give the worker to breathe is fresh, clean, abundant.

More than 50 per cent of the human body by actual weight is oxygen. The one source of supply of this oxygen to feed the blood, brain, tissues, nerves and organs is a continual stream of outside air. In a room where several people are working, the air should be changed at least once every five minutes during every hour of the day, no matter how cold or stormy the weather may be. According to recent scientific tables, the required number of cubic feet of fresh air per person per hour is 1800 for an office room, 2400 for a school room, 3000 for workshops and barracks, 3600 for hospitals and sanitariums.

The psychology of ventilation should not be overlooked. Oxygen starvation has caused the untimely death of many a good disposition. Needless arguments and disputes,

## GMC Quality Its Own Best Proof

When a product is built inherently good—good for its own sake—that fact will inevitably impress itself upon the minds of users and prospective users.

This is on the principle that truth will prevail. And this is the principle underlying the rapidly widening reputation of GMC trucks for plain, honest quality.

No motor truck can establish for itself lasting confidence unless its quality is proved by use. No business can become truly great and permanent unless founded on a sound and legitimate basis.

So GMC trucks are fast reaping the benefits of true quality—that genuineness of merit which reflects the high ideals of the builders.

GMC quality is fighting its own battle against every approach of inferiority.

GMC trucks are not only good, but able to prove it in performance.

That users keep on buying more GMC trucks is evidence of this fact.

Let your next truck be a GMC.

grouches, grievances and misunderstandings without number have had their source in foul air. The fatigue, irritation and extent of overtime may be due principally to the same cause. Labor strikes have been due to bad housing conditions.

The ideal ventilating system is automatic. You don't have to work it or even think about it. You merely have it placed in your office, then let it operate itself.

Look thru at least six catalogs before purchasing any device or installing a system. You would do better to make this number ten, as there are at least five ventilator methods worthy of attention and under each of the five you should compare at least two different makes. Only by regarding point by point the advantages and disadvantages of the methods of rival manufacturers can you finally settle on the one to serve your purpose best.

Write out a brief description of your ventilating problem or problems, and submit the statement to the engineers of the companies having equipment to sell. The leading companies furnish without charge this expert counsel of an engineering staff to possible customers who request it.

**MAKE**, however, a thoro test for yourself under actual conditions as they will be in your office, factory, store, mill, or other buildings. A laboratory test made even by an impartial institute of technology can never exactly reproduce the conditions the ventilator meets in your building, hence you should insist on a trial before your eyes, conducted by your own officials under the supervision of experts from the ventilating company.

Choose a ventilator constructed so as to provide a regular, ample flow of air by an automatic method. For example, a device moved by the current of air outside your building would answer this requirement if a gentle current would keep the machine in motion.

Observe particularly the capacity in cubic feet of air under low wind pressure. Otherwise no wind, no ventilation. A good system furnishes thru a twelve-inch ventilator not less than 350 cubic feet of air per minute when the velocity of the wind is five miles an hour. Government experts declare that the average wind velocity thru-out the United States is ten miles an hour, but you cannot safely figure on this because when the rate is only five miles an hour, good ventilation must still be secured; and the most satisfactory ventilator works freely when the wind velocity rate has dropt as low as three miles an hour. This point should be held vital, as there are certain makes of suction ventilator which go dead on a perfectly still summer afternoon, which, being hotter, calls for more ventilation rather than less.

Be sure that the appliance works independent of relative temperature inside and outside of the building. Some ventilators amount to nothing more than a hole in the room. This type fails to work when the temperature inside is lower than that outside, or about equal to it. Watch out for acute angles in the mechanism. Each bend, twist or turn will reduce air velocity by increasing friction, and therefore should be avoided.

Make sure that the current of fresh air is drawn from the floor to the ceiling and the current of impure air is exhausted by an outlet near the ceiling. The deadly stratum of carbonic acid gas forms in the area of the room six feet nearest the floor, and to dissipate this poison toward the ceiling and thence out of the room the intake of fresh air should be near the floor as possible.

Regard the initial cost of the ventilator in comparison not only with results produced but also with future annual cost of

HOUSEHOLD CONSULTING DIVISION

119 West 40th St., New York

operation, upkeep and repair. Thus a fan ventilating system costs more to operate than a group of semi-mechanical ventilators worked by their own power. Do not be misled by a price that fails to include the whole cost.

**I**MMEDIATELY connected with the problem of scientific ventilation is that of temperature control. The vitality of office workers is likely to be reduced, the energy dissipated, the health undermined, if any one of three common dangers is found to exist. The first danger is that of sudden or prolonged variation or fluctuation in the amount of heat; the second is a withering excess of artificial heat; the third is a parching dryness of the air caused by the construction of the heating system.

The best work is done at a temperature of about 65 degrees. When your thermometer goes above 68 the production will fall below the standard, in quality or quantity, or both. If your office or home is heated by a central plant with steam, gas or hot water, you will probably find that the simplest, safest, easiest and most economical way to control temperature is by means of an electrical thermostat or automatic heat indicator and regulator. This could be adapted also to hot air, vapor, vacuum and combination heating plant or municipally furnished heat. You simply attach the device to your furnace, wind the thermostat clock once a week, set the indicator at the hour and temperature desired, and leave to the guaranteed accuracy of the little machine the whole problem of heat regulation.

The best heat regulator saves the cost many times over. It reduces fuel bills about 20 per cent. It saves the doctors' bills for the cold weather ailments caused by overheated houses. It prevents the danger of fire from pipes that get too hot. And it lengthens the life of the heating plant by safeguarding it from extremes of heat and cold. The action is entirely automatic. When the temperature reaches the proper point, the furnace drafts are closed by electricity, and if the temperature falls even one degree they are opened again.

**O**NE of the great factors in health-giving heat is a regular supply of moisture. Hot air is usually dry air, and dry air is fatal. It kills plants in a greenhouse—and human plants in your home or place of business. The human body is three-fourths water. When you try to work or live in a place whose air has been robbed of its natural moisture the result is devitalizing and debilitating.

Experiments have shown that people are as comfortable in moistened air at 65 degrees as in dry air at 75 degrees, hence the process of moistening the air means a big saving in fuel. The problem is solved by a simple contrivance called a humidifier. This receptacle, holding water and a set of wicks that work by capillary attraction, is placed above the radiator, furnace or other heating base, and thoroughly moistens the dry air before it enters the room.

A matter of great importance remains yet to be considered. Practically every bit of office work is eye work. Hence illumination should be regarded as one of the first factors in office efficiency.

Every year in the United States there are 700,000 industrial accidents, which cost the employers of the wounded men over 2 per cent of the entire wage appropriation of American factories. 125,000 of these injuries could be avoided by proper illumination. About \$1,000,000 a year, spent by employers in states of average size such as Wisconsin or Massachusetts, is the total yearly waste in each state for medical services, compensation bonuses, and lost wages, on account of in-

## Proving out the Tractor Principle

The success of the Ideal Tractor Lawn Mower was instantaneous. Wherever they have been used they have immediately demonstrated the great advantage and value of the tractor principle of operation for power mowers.

On large estates, municipal parks, school grounds, college grounds, golf courses, cemeteries, etc., the Ideal has delivered the same efficient, economical service. On this page we reproduce a number of actual photos showing Ideals at work in various parts of the country.

### Does the Work of Five Men

The Ideal has a 30 inch mower. One machine will mow from four to five acres of grass a day on an operating expense of about fifty cents for fuel and oil.

### Keeps the Sod Rolled

The Ideal is designed with a roller as integral part of the machine and the grass is rolled every time it is cut—this keeps the turf firm, smooth and in the finest possible condition.

With every outfit we furnish a small caster which may be substituted for the mower in a few minutes time, and quickly converts the machine into a power roller.

### Cuts Close to the Trees, Walks, Flower-Beds, and Shrubbery

With the Ideal a man can work just as close to various obstacles as with a hand mower.

The construction of the Ideal is extremely simple—it has no complicated clutches or gears to break, get out of order and cause trouble. The cutting blades operate by the traction of their side wheels on the sod.

### Five Days Trial—Satisfaction Guaranteed

Write for details of our five-day trial offer. Ideal Power Lawn Mowers are on a five-day guarantee of satisfaction, and we will willingly refund money on any machine that does not prove satisfactory when properly operated.

You can secure this Ideal through your hardware dealer or direct from our factory. Write today for special literature.

## Real People

HAT'S what the doughboys called The Salvation Army workers on the battle-fields and back of the lines in France.

They were "real people" to the soldier, because they were just like the folks back home, with hands accustomed to work and eyes always ready to smile.

And now these same "real people," back from the war with new laurels, have built their trenches in the Streets of Poverty in America. They will wage the fight for the poor and unfortunate at home, just as they have done for years, only on a larger scale.

The Salvation Army conducts Rescue Homes—Day Nurseries—Homes for the Helpless Aged—Fresh-Air Farms—Free Clinics.

It must extend this service everywhere where Misery and Poverty exist. It must continue to reach down and lift up the men, women and children who have fallen.

## Will You Help?

---

THE SALVATION ARMY HOME SERVICE FUND  
MAY 19 TO 26

dustrial accidents. This amount of money for three years invested in modern lighting systems and methods would equip every large industrial plant of any state in the Union with adequate, healthful, productive illumination.

When you improve light you increase production. The gain is approximately from 2 to 10 per cent, the average gain being estimated at 5 per cent by the National Electric Light Association. A certain plant in England gained 11.4 per cent in yearly output, according to the official report of the British Government. A committee on illumination appointed by the French Government states that a good lighting system increases production from 8 to 15 per cent, and that the additional profit thus accruing pays several times the cost of installation and operation of better lighting equipment.

**O**ther advantages exist that you might not suspect. Take for instance that of reduction of labor turnover. Good light all day long makes employees more accurate, speedy, contented and cheerful, able to do their best work, and anxious to keep on doing it. Less supervision is required—a saving in the time of the supervision and the temper of the supervised.

In a modern factory building the windows are the main feature visible, occupying about three-fourths of the entire wall space. Every added foot of light means more and better work. If the window space in your office does not equal half the outer wall space, you may profitably think of moving to another office.

Architects and engineers declare that the interiors of buildings should be painted white. The result is a gain of 19 per cent to 36 per cent in power of illumination both natural and artificial, according to the most rigid laboratory tests. The finest kind of pure white paint reflects the light so far that there is no dark corner in any part of your office, and so well that the daylight period will be lengthened and your light bill correspondingly reduced. It may even be found possible to do away with most of your desk lamps, letting the more economical inverted lighting system furnish illumination for all but very close work. You will find production mounting up. The quality of the work and the character of the workers will be improved. Errors, accidents and complaints will be fewer. Neatness, carefulness and thoughtfulness may even become popular, and contagious.

## MY COUNTRY? 'TIS AND 'TISN'T

(Continued from page 248)

this country may be compelled to return to their countries of birth for military service, nor is there any way in which persons may be forced into armies against their wills as long as they remain in the United States.

The Department of State, it seems, in this order recognized the existence of dual citizenship without taking an affirmative stand either way.

"This meets the situation about as well," the late Congressman Jacob E. Meeker of Missouri said of Secretary Bryan's order. "as would the statement of the chief of police that the citizens of the city would be perfectly protected in the streets so long as they stayed in their own homes, or as the time-honored permission to the little girl to go to swim as long as she did not go near the water. It is not a question of whether persons can be forced into foreign armies as long as they remain in the United States. The question is whether when their family or business obligations oblige them to go out of the United States, the long arm of the United States will protect them on

## "Tom, we ought to install the Dictograph, because—

"That demonstration the Dictograph man has just given us has made me realize that hours of precious time are wasted by all of us—from myself down.

"We might as well be honest with ourselves, and admit that there is considerable lost motion in our organization; and I, for one, am convinced that we need the—

# Dictograph

## System of Interior Telephones

You, too, should let us demonstrate the Dictograph, and show you what it will do for you—how it will simplify and expedite the work of every executive and employee in your organization. The Dictograph is in daily use by over 50,000 leading executives—in every line of business, large and small—who pronounce it 100% efficient, because it brings order, system, quiet, accuracy and—results.

With it you can communicate instantly with any employee by simply pressing a key—you can give orders to one or more employees at the same time—confer simultaneously with any number of your employees without requiring them to leave their desks—in fact, think clearer and more consecutively and, therefore, accomplish more in less time and with less effort.

### May we give you an actual working, talking, 5-minute demonstration?

Let us show you—on your own desk—in your own office, bank, plant or factory—how the famous loud-speaking Master Station gives the executive the "right of way"—how the voice is heard as perfectly as if the party talking were in the same room sitting at your desk—

how you can hold conferences, dictate letters, receive reports, give orders, talk to callers—all without effort and without leaving your desk, while at the same time, your entire organization is afforded complete, direct and efficient inter-office and inter-department communication.

Mail the Coupon now. Our free booklet, "An Essay on Executive Efficiency," will be mailed, or Demonstration made, without obligation of any kind on your part.

account of the allegiance they have sworn to it."

"Dual citizenship" is a term ambiguous in more than it seems to the general understanding. It is necessary to use it in two senses, and to distinguish clearly between the two. The first concerns the question of the citizenship of children born in the United States of foreign born parents; the second the status of naturalized American citizens. Of course, the conflict in citizenship which gives birth to the additional perplexity of dual citizenship all rests on the opposing laws of blood and land. But there are many minor regulations, in respect to absence from the country, or other voluntary and involuntary methods of expatriation, which further confuse things.

The conditions of state citizenship vary in several states, some requiring as a prerequisite of the exercise of the elective franchise United States citizenship, while others require only a declaration of intention to become a citizen of the United States coupled with some qualification of residence. Citizenship of the United States may be acquired by reason of birth in a particular place (i. e., by the law of the land) and by reason of nationality of the birth (i. e., by law of the blood).

In June, 1915, a young man named Ugo da Prato, born in Boston in 1895, and who had gone to Italy in 1912 to study architecture, was held by the Italian Government as liable to military duty because his father, Antonio da Prato, had been a native of Italy. He had emigrated to America and had been naturalized in Boston in 1892, three years before the birth of Ugo. Subsequent to his impressment, Ugo was released—not as a matter of right, however, but as a matter of policy and courtesy to the American Government. A much more patent case was that of a young man born in this country, the son of a naturalized citizen hailing from Italy. The young man grew up surrounded by American institutions, and subsequently married an American girl. They had several children—the third generation of the family to consider themselves Americans, and Americans only. Surely there could never be a doubt as to the citizenship of the father of these children!

Nevertheless, he was ordered by the Italian consulate in the city in which he resided to report "home" for military duty on the outbreak of the war, under penalty of having some property in the old country inherited from his father forfeited, should he refuse to obey. Observe the injustice which would be visited upon the man whatever his decision! He decided to remain here, thus sacrificing, apparently, property which belonged to him under the laws of civilization. However, assuming that he had decided that sheer duty to the financial welfare of his family forced him to enter into the service of what was at the time an alien power to us, he would unwillingly but inevitably have sacrificed his American citizenship, for, on entering the Italian army, he would formally have taken the oath of allegiance to the King and the state. Section 2 of the Act of March 2, 1907, entitled "Expatriation of Citizens and Their Protection Abroad," provides that

any American citizen shall be deemed to have expatriated himself when he has been naturalized in any foreign state in conformity with its laws or when he has taken an oath of allegiance to any foreign state.

It is good to be able to add that those who went abroad to fight for the Allies before we entered the war have had their American citizenship restored by special act of Congress—applying, however, only to present conditions and giving no guarantee that a man called at some future day, perhaps, to fight for another power

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course was reduced from three years to two years and six months. The cessation of hostilities will not end the need for nurses abroad; they will be needed, in large numbers, for reconstruction work, and for the establishment of schools of nursing in the different countries of Europe for a long time to come. We plan, therefore, to continue the course of two years and six months.

For Information write to MISS AGNES S. WARD, Superintendent

than the United States would not sacrifice his citizenship, no matter how unwillingly he was enrolled into the foreign forces.

One of the most interesting and colorful passages of our immigration in late years has been the increasing flow of immigration from the Orient. For instance, the Ladino Jews, from Turkey, are represented in New York City alone by a numerical group of about 25,000, most of which group came over within the past ten years. These people are the direct descendants of those Spanish Jews expelled from the Kingdom of King Ferdinand and Isabella in the fifteenth century. They still speak the archaic Spanish of those times with interspersions of Turkish and Hebrew words. Their importance to America, aside from the ancient culture they bring with them, is their knowledge of the Spanish language, and their possession of that commercial ability peculiar to the Jew; and these qualifications make them a natural go-between to secure and expand our commerce with South America, of which so much in pre-war times went to Germany. There can be no doubt in the minds of those acquainted with the general situation that this valuable emigration will continue to flow from the Orient. This is article 5 of the Ottoman Legislation, Vol. 8:

The Ottoman subject who has acquired a foreign nationality with the authorization of the Imperial Government is considered and treated as a foreign subject. If, on the contrary he has naturalized himself as a foreigner without preliminary authorization of the Imperial Government, his naturalization will be considered as null and void and he will continue to be considered and treat in all respects as an Ottoman subject. No Ottoman subject can in any case acquire foreign naturalization until after obtaining an act of authorization delivered by virtue of an Imperial Irade (special proclamation).

The necessity of clarifying this and similar situations at the Peace Conference is strongly accentuated by the likelihood of many of the old and new governments of Europe passing laws forbidding emigration. It is estimated that in a normal year about 600,000 persons go abroad either on business, pleasure, or with the intention of remaining there. The probabilities are that after the treaty of peace is signed, thousands of foreign-born American citizens or their children will return to their native lands to see how their friends, or parents' friends, and relatives, came thru the fires of the past few years. Many will have no intention of doing anything other than returning to this country as soon as they are satisfied with the conditions of their relatives and friends.

But, supposing that laws will be in force prohibiting citizens or subjects of the country leaving it, what will be their status? It is all very well to rely on courtesy in international diplomacy, but is it not much wiser to rely on acknowledged rights, whatever they may be? And in this age when liberalism is everywhere triumphing or preparing to triumph, when the nations are bonding together for their mutual welfare and interests, when an almost universal *cordiale entente* exists, would it not be statesmanlike and right to demand that the situation of citizenship, always fraught with such grave uncertainties, be clarified and straitened, that the confusing ambiguity of "dual citizenship" be eliminated by the conference of the representatives of the numerous peoples who are so vitally interested in seeing that a man's life is made as nearly his own as is humanly possible; that a man's right is to seek his home and find it anywhere under the sun, so long as he subscribes to the dictates of organized society; and that so far as American citizenship is concerned, it is an inviolable and as indivisible as the eternal union of the states?

# One Food Cost That Stays Down

**Still 5 Cents**

*Per 1000 Calories*

Quaker Oats—the food of foods—costs you five cents per 1000 calories—the energy measure of food value.

That is one-tenth what meat costs—one-tenth what fish costs—on the average.

Some common foods, on this calory basis, cost from 15 to 20 times oats.

Make Quaker Oats your breakfast. Use this low cost to average up your food cost

**Meats Average 50c**  
*Per 1000 Calories*

## Two Dishes—One Cent

Two big dishes of Quaker Oats for one cent. Why, a bite of meat costs that.

Then think what a food this is. The oat is the greatest food that grows. It is almost the ideal food—nearly a complete food.

In the needed food elements, including minerals, it shows almost perfect balance.

### Cost Per 1000 Calories

*Based on Prices at This Writing*

Quaker Oats	-	-	-	-	-	5c
Round Steak	-	-	-	-	-	41c
Veal Cutlets	-	-	-	-	-	57c
Average Fish	-	-	-	-	-	60c
In Squash	-	-	-	-	-	75c

Costly foods should not be eliminated. Meats and vegetables are necessary.

But remember that Quaker Oats costs one-tenth as much. It's a wonderful food and delicious.

Make it the basis of one meal a day.

**Vegetables Average 50c**

## PUTTING THE Y IN ITALY

(Continued from page 247)

was filled with stretchers, occupied by swathed and bandaged *soldati*, but there were still others who could not make the trip to the concert room even thus luxuriously. So we invented the scheme of ward entertainments. Two Y girls, an Italian signorina, who combined a perfect knowledge of the English language with an equally perfect knowledge of Italian customs, tastes and prejudices, and a full measure of Latin charm, our *prestigiature*, a young movie operator, and the *porcellino*, composed themselves into a traveling troupe whose mission was the entertainment of those boys in the narrow white beds. The *porcellino* deserves a word to himself. *Porcellino*, little pig, is the expressive name of the little sheet iron stove with round body on four legs that eats wood with quite porcine greediness and, also pig like, keeps most of the resulting heat to himself. We applied the name, for reasons of resemblance, to the handy little moving picture machine, whose electric current was evolved by twisting its tail, and which projected its pictures on to a small portable screen or, if you liked, on to the wall or ceiling.

One of the Y girls not only sang herself, in good Yankee Italian, but induced the soldiers to sing with her some of their popular songs, which are full of swing and melody, and refreshingly innocent of jazziness. So the Yankee girl and the wounded *soldati* sang lustily in one ward, in another the *prestigiature* kept the boys watching one hand like hawks while he did surreptitious things with the other, while in a third the *porcellino* responded gallantly to much vicious tail-twisting. Then they changed places and did it all over again, till each of the three wards had enjoyed a full program. Meanwhile the other two girls flew around and managed and dispensed cheer and chatter—and, sometimes cigarettes.

SO the hospitals and the barracks were taken care of with entertainment. Meanwhile each morning at a briskly early hour our two athletic men would repair to one or another of the barracks to "put on" for the soldiers' gymnastic work and athletic games. This phase of our program was a little less important in Italy than in the camps at home and with the A. E. F. because the Italian is not instinctively an athlete or a player of outdoor games. But the *soldati* took kindly to American teaching, and soon rose to heights of real enthusiasm in games of mass soccer, volley ball and giant ball. The setting up exercises, too, and the shadow boxing which our athletic instructors offered, were entered into with vigor and apparent enjoyment. The value of these methods of physical development was quickly recognized by the officers and the military authorities.

THRU the station at the Campo di Marte, where the troop trains stop, poured every day thousands of soldiers on their way to and from the front. Florence is the busiest junction point for troop movements in all Italy. Many of the soldiers who pass must change trains there, and often spend hours waiting for the next *tradotta*. It was tiresome, dull waiting on that station platform—until the Y took hold. Then was evolved, by progressive steps, a triple institution which supplied all that the heart of the *soldato* could desire: rest, recreation, sleep, food and drink. It began with the *Casa*. A long narrow room filled with tables, chairs and benches provided the typical accommodations for the letter home, games, resting and sociability. Each soldier as he

### The Independent Household Consulting Service

119 West 40th Street New York

came in received a sheet of paper and an envelope and two attractive postcards. On the tables he found pen and ink. If there were not too many of him at once, his letter and postcards would be stamped for him—for the Italian soldier's pay of two cents a day makes even a two cent stamp a purchase of moment.

Every afternoon and evening the picture machine at one end of the room ground out its reels almost without stopping, while a pianist provided the traditional accompaniment. The one room finally grew to two, for the military authorities, deeply appreciative of the service the Y was rendering, gave us everything that there was in sight. The stage built at the end of the second room was the scene of frequent entertainments. A third room was a forty bed dormitory, the camp cots supplied by the War Department, the bedding and pillows by the Y. Every night that dormitory was filled with sleeping soldiers, snatching a welcome few hours between one *tradotta* and another. *Tradotta* traveling is wearisome business, with its reformed freight cars crowded to the limit; and the Florence stop, with decent beds and clean sheets and pillow cases, was a Godsend.

At the other end of the station was the most interesting part of the whole institution, for there the famished soldier could get food and drink. The *Casa* and dormitory had been in operation some months with complete success, when the major in command at the station came to us with a suggestion. A buffet for the soldiers had been run, since the war began, by private individuals on contract. The rooms were dirty, the food hardly passable, the prices exorbitant. It was hard on the soldiers. The concession would expire in about a month. Would we take it over and run the buffet in the same splendid way in which the other Y activities at the Campo di Marte were conducted? The army and railroad authorities would be overjoyed if we would; for they had seen what the Y could do.

It was a tempting proposal. But there seemed to be obstacles. Our agreement with the army forbade our selling food to the soldiers in our *case*. We were not sure that we ought to enter upon a business proposition like this. Finally the buffet sold wine, beer and stronger drinks. The first obstacle was quickly removed, for the War Department ruled that the agreement need not stand in the way. General headquarters of the Y at Bologna were willing to have us go into business, if we could guarantee that we would not run the buffet at a loss. Not being business men—the director of the Campo di Marte *casa* and the Regional Director—but a settlement worker and an editor, and incidentally crusaders, we had faith that we could. Remained only the question of the wine and things. It was a puzzling question.

We were neither of us "drinking men"; we both believed in temperance, in fact in prohibition. But we knew that to induce the Italian to forego his wine with his meals was not within the bounds of human possibility—at least in the time at our disposal! We knew that we could not run that buffet without selling wine. We became convinced, after long and prayerful consideration, that it would be better for the Y to run that buffet, as we knew it could be run, and sell wine there than to leave the business in the hands of those who were doing such a poor job at it, from the point of view of the Italian soldier and his physical and moral welfare. We were there to serve the Italian soldier. So we cast the die in favor of assuming the job, and headquarters at Bologna as well as a

high representative of the International Committee of the Y. M. C. A. then in Italy, approved our solution. So we went at it.

WHEN the late concessionaire laid down the reins of control at midnight one night, we picked them up. It took us several weeks to get the thing into shape that satisfied us, for we had to keep running twenty-four hours a day while we made our changes and improvements. But we did it. That dirty hole, furnishing poor food at high prices and all kinds of strong drink, was transformed into a bright, cheery, clean lunch room, where the food was wholesome and toothsome, the prices absurdly low, and nothing in the way of drink but a pure, light wine was sold.

The bill of fare and the system of service had to be immensely simple. For with anywhere from fifty to two hundred hungry soldiers clamoring for admittance at the same moment and demanding instant service, complications would have spelled disaster. We introduced the soda-check system of payment; the soldiers, passing in single file before a cashier's window, bought tickets for whatever amount they pleased, calculated according to the bill of fare prominently displayed. They passed on to the counter, where they were served according to their demands. Then they moved on into another room to eat.

Our staples were *caffè latte*—coffee and milk—and *minestrone*—a soup of marvelous richness and heartiness. The soldiers obtained their chunks of bread, without which the Italian does not esteem himself fed, no matter what else may be set before him, at the army commissary next door. He could buy from us also sardines or other canned foods; but nothing met with such a demand as the coffee and the soup. The cold and tired traveler wants something hot; and hot—and good—those staples were served in quantities that were astonishing. The *caffè latte* and the *minestrone* were made, on a battery of camp range sections, in cubical copper vessels known as *marmite*, each holding something like 25 gallons. It soon became, in the chill, wet days of winter, a common occurrence for the Y man from the buffet to report to the Regional Director at luncheon, "We made 23 *marmite* of *minestrone* in the last twenty-four hours, and even then we didn't have enough. We got rid of 20 *marmite* of *caffè latte*, too." Rather an impressive total it made—575 gallons of soup, and 500 gallons of coffee and milk in a single day. The prices were not unimpressive either, in these war days. We began, in order to be on the safe side, by charging 40 *centesimi* for a big bowl either of *minestrone* or of *caffè latte*. That is the equivalent, at the prevailing rate of exchange, of six and a half cents. But as the months went by, and we found that our business venture was by way of being a success, we saw our way to cutting down even that absurdly low price. We drew our pen thru the 40 and made it 35. So we were selling a big bowl of the finest, richest soup you would ever want to taste or an equally big bowl of good coffee and milk, sweetened with real sugar, for a trifle more than five and a half cents. Is it any wonder that we did a land office business?

For the officers we had a little restaurant in a room off the buffet. It was clean, cheerful and attractive; and the meal we served there, at any hour of the day or night, could not be duplicated anywhere in Florence for excellence and cheapness. I doubt if it could be duplicated anywhere in Italy. You could get, if you were an Italian officer—or any other kind of an Allied officer, for that matter—a dinner from soup to fruit for a few cents more than a dollar.

### Household Consulting Division

119 W. 40th St., New York

The main dish was a bountiful plate of meat or chicken with potatoes and another vegetable, and it cost three and a half lire, or fifty-six cents. The other dishes were the famous *minestrone*, pasta with a tasty sauce, cheese, fruit and coffee. One evening we invited the commanding officer of the Army Corps, with his Chief of Staff, down to the restaurant and gave them precisely the same dinner that they would have found if they had dropped in off a troop train. They ate with evident enjoyment, and over the coffee General Schenoni said, "But you said you would give us a soldier's dinner. This is a banquet!" We produced the regular bill of fare, to show the prices that we charged, and asked if they thought they were reasonable. Thereupon the Chief of Staff burst out, "All that I can say is, that all the officers in Florence ought to bring their families down here to eat. It cannot be done at home."

At the end of two months and a half we had proved, to the satisfaction of all concerned, the military authorities, the officers and the soldiers who passed thru, and ourselves, that we could run a military buffet which provided good food at low prices in decent and attractive surroundings. What was equally gratifying, we had proved to the satisfaction of any auditor that we could make the project pay. We had no intention or desire to make money; our purpose was service. But we did intend that the operation of that buffet should not cost money; and we succeeded. We had spent something like \$1600 in repairing, decorating and furnishing the buffet and restaurant. In ten weeks' time we had not only earned all our running expenses, but we had earned enough in addition to take care of those capital expenditures for permanent improvements and furnishings. If we had closed out the business at that moment, we should have been able to hand back to the general treasury of the Y a clear balance, in addition to repaying, of course, the money which had been advanced to the region for working capital. So we had made money; but we had only done so as a precaution against unforeseen developments in the future. It was our purpose to continue to reduce prices just as far and just as rapidly as it was safe to do so.

In the first days of March the commanding officer at the Campo di Marte station was good enough to write a letter expressive of his appreciation of what we had done at both ends of the station, in the *casa* and the buffet. His letter read thus:

For the long continued assistance which your worthy Association has rendered, this command feels impelled to express its hearty thanks.

The institution of the Casa del Soldato was indeed opportune in that it gave a rest place and offered wholesome diversion to our soldiers, conserving and promoting their strength and morale. Not less opportune and meritorious was the taking over of the Military Buffet, which prevented our brave soldiers from being exploited at the hands of avaricious speculators, and gave them food and drink at a moderate price.

In time past, on account of the absolute lack of warm food and drink, our soldiers who arrived tired and cold after a long journey in the not too comfortable troop trains, sought temporary comfort in drinking strong alcoholic beverages, thus injuring both their bodies and their minds. But since your worthy Association furnished them, at a moderate price, soup, coffee and meat, and so forth, they do not now seek for the strong alcoholic drinks. This works to their advantage, both physical and moral. One can conclude, therefore, that the operation of the Military Buffet by you has been not only a work of merit in caring for the body, but even more, in the care of the soul.

This is valuable testimony, from an officer of the finest type with a high regard for the men under his command and a real appreciation of the importance of moral values in life both military and civil. It is characteristic of the commendation which our work with the hundreds of thousands of soldiers passing thru the Campo di

# High Blood Pressure —Hardened Arteries —How to Remedy

By R. L. ALSAKER, M.D.

(Specialist in Health Conservation)

R. L. ALSAKER, M. D.  
Founder and Director  
THE ALSAKER WAY

Dear Doctor Alsaker:

Last week I had two severe shocks. One of my friends had a stroke of apoplexy and is now in a very serious condition; another one dropped dead. Both of them are a little past fifty, and both of them have suffered from high blood pressure for some time. I am anxious because I too am past fifty, and my blood pressure runs from 190 to over 200. From time to time I have discomfort in the region of the heart and pains in the head.

A third friend tells me that he followed your directions and recovered. He is active and looks healthy, but I can hardly believe this, for my physicians—and they are good ones—have informed me that high blood pressure can not be reduced. Please write me frankly by return mail. I want to linger here a while longer. F. R. M.

The condition mentioned in this letter is very common among men past the age of forty-five. This is a case of hardening of the arteries (arteriosclerosis) with high blood pressure. An examination nearly always shows more or less Bright's disease, and this is generally caused by the excessive pressure, which forces the albumin through the kidneys.

The pain in the region of the heart is due to the over-worked condition of the heart, which is often aggravated by gas in the stomach and the bowels. The pain in the head is caused partly by the excessive pressure of the blood, and partly by accumulations of waste in the body.

Many physicians give nitro-glycerin to lower the excessive blood pressure, but this is useless, for though the pressure is temporarily reduced, it returns again.

**The condition described is dangerous because if allowed to continue the patient will usually expire from apoplexy of the brain, or heart failure; sometimes death comes through Bright's disease, with its accompanying uremia.**

**Is the condition curable?** It is in the majority of cases. Nearly everybody believes that hardened arteries with high blood pressure is a fatal affliction. And it is, if it is treated in the old way with drugs and a superabundance of food. If it is treated correctly, that is, in accordance with the laws of nature, at least four out of five will recover. Their arteries may not become quite as soft as they should be; their blood pressure may not return to the ideal point; but they will recover to such an extent that they have neither aches nor pains, nor are they in any further danger from apoplexy or heart disease. They will recover so completely that they can live to be old—far older than three score years and ten—and they can be so healthy that they can't feel anything wrong. And what more can they ask?

In most of these cases correct treatment will reduce the blood pressure from twenty to thirty points the first month. After that the reduction is slower.

If this is true, why don't most doctors

and many laymen know it? Because both physicians and lay individuals are looking for cures from pills, powders and potions, aided by serums and operations. And these means will not work in cases of high blood pressure.

**The correct way, which is Nature's way, is so simple and reasonable that very few have discovered it to date. It consists of living so that the hardening process stops immediately, and then the blood pressure begins to decrease. Usually the patient is out of danger in a few weeks.**

So if you would overcome high blood pressure and soften arteries that are too hard you will have to learn how to use your lungs to get plenty of fresh air; how to drink the right kind of liquids so as to aid in washing the impurities out of the body; how to eat the best of foods in the best way, so that these foods will build health instead of producing disease; and how to give the body good general care in every way.

There are exceptions who can not recover. This is because they have abused themselves so long that either the kidneys have failed beyond recovery; or the heart valves or heart walls have been too much injured; or the walls of the arteries themselves have become as brittle as chalk in spots. But the vast majority—at least four out of five on the average—can get into such good condition that they can truly say that they are enjoying good health.

I have had patrons who were continually dizzy; who had surging of the blood to the head; who had daily headaches; who had oppression in the region of the heart (precordial pain); who were so short of breath that they could not walk upstairs, nor could they walk as much as a block without resting—yes, individuals with as bad symptoms as that have recovered very good health, after they had been told by competent physicians that nothing could be done for their hardened arteries and high blood pressure.

Nature performs wonders if you give her a chance. If you are truly interested, read the publisher's announcement following this article.

**Publisher's Announcement and Personal Guarantee**—R. L. Alsaker, M.D., is a new type of physician. He specializes in health and teaches those who come to him for advice, how to live so that disease will vanish. He has written several health-building handbooks that explain the cause of disease and show the sick how to recover. One of the most important is "Curing Diseases of Heart and Arteries." This book is really a course of instructions on the correct home treatment of Heart Disease, Hardened Arteries, High Blood Pressure and Apoplexy. It gives specific advice on the care of the body and the proper foods to eat to produce a cure. All forms of heart disease are discussed and a correct treatment prescribed. It is marvelous what the common foods will do for the sick when properly combined and intelligently eaten. Send \$2.10 for "Curing Diseases of the Heart and Arteries." Follow the doctor's advice regarding the care of the body and especially **The Alsaker Way** of food combining and eating, for 30 days. If you are fully satisfied with the good results obtained keep the book; otherwise return it and I will refund your money. George G. Porter, a prominent business man of Syracuse, N. Y., writes, "Measured by the usual fees charged by physicians for a single consultation and prescription, Dr. Alsaker's health-building handbooks are worth \$50 to \$100 each." Mr. Porter has purchased and distributed among sick people, more than 200 copies of *The Alsaker Handbooks*.

Frank E. Morrison (Dec. 1229) Dept. 248, 1133 Broadway, N. Y., Publisher of The Alsaker Health Books.

# What Is Nerve Force?

**N**ERVE Force is an energy created by the nervous system. What it is, we do not know, just as we do not know what electricity is.

We know this of Nerve Force. It is the dominant power of our existence. It governs our whole life. It is Life, for if we knew what nerve force is, we would know the secret of life.

Nerve force is the basic force of the body and mind. The power of every muscle, every organ, in fact, every cell is governed and receives its initial impulse through the nerves. Our vitality, strength and endurance are directly governed by the degree of our nerve force.

If an elephant had the same degree of nerve force as a flea, or an ant, he would jump over mountains and push down skyscrapers. If an ordinary man had the same degree of nerve force as a cat, he could break all athletic records without halt trying. This is an example of Muscular Nerve Force.

Mental Nerve Force is indicated by force of character, personal magnetism, moral courage and mental power.

Organic Nerve Force means health and long life.

It is a well balanced combination of Physical, Mental and Organic Nerve Force that has made Thomas Edison, General Pershing and Charles Schwab and other great men what they are. 95% of mankind are led by the other 5%. It is Nerve Force that does the leading.

In our nerves, therefore, lies our greatest strength; and there, also, our greatest weakness—for when our nerve force becomes depleted, through worry, disease, overwork, abuse, every muscle loses its strength and endurance; every organ becomes partly paralyzed, and the mind becomes befogged.

The noted British authority on the nerves, Alfred T. Schofield, says, "It is my belief that the greatest factor in the maintenance of health is that the nerves should be in order."

Unfortunately few people know that they waste their nerve force, or will admit that it has been more or less exhausted. So long as their hands and knees do not tremble, they cling to the belief that their nerves are strong and sound, which is a dangerous assumption.

How often do we hear of people running from doctor to doctor, seeking relief from a mysterious "something-the-matter" with them, though repeated examinations fail to indicate that any particular organ is weak or diseased.

It is "nerves" or "you are run down," the doctor tells the victim. Then a "tonic" is prescribed, which temporarily gives the nerves a swift kick, and speeds them up, just as a fagged-out horse may be made to speed up by towing him behind an automobile.

The symptoms of nerve exhaustion vary according to individual characteristics, but the development is usually as follows:

First Stage: Lack of energy and endurance; that "tired feeling," especially in the back and knees.

Second Stage: Nervousness; sleeplessness; irritability; decline in sex force; loss of hair; nervous indigestion; sour stomach; gas in bowels; constipation; irregular heart; poor memory; lack of mental endurance; dizziness; headaches;

backache, neuritis, rheumatism, and other pains.

Third Stage: Serious mental disturbances; fear; undue worry; melancholia; dangerous organic disturbances; suicidal tendencies; and in extreme cases, insanity.

It is evident that nerve depletion leads to a long train of evils that torture the mind and body. It is no wonder neurasthenics (nerve bankrupts) become melancholy and do not care to live.

If only a few of the symptoms mentioned apply to you, especially those indicating mental instability, you may be sure your nerves are at fault—that you have exhausted your Nerve Force.

Nerve Force is the most precious gift of Nature. It means everything—your happiness, your health, your success in life. You should know all there is to learn about your nerves; how to relax, calm and soothe your nerves, so that after a severe nerve strain you can rebuild your lost Nerve Force, and keep yourself physically and mentally fit.

Paul von Boeckmann, the noted Nerve Culturist, who for 25 years has been the leading authority in America on Breathing, Nerve Culture and Psycho-physics, has written a remarkable book on the Nerves, which teaches how to soothe, calm and care for the nerves. The cost of the book is only 25 cents (coin or stamps). Bound in elegant cloth and gold cover, 50 cents. Address, Paul von Boeckmann, Studio 231, World's Tower Bldg., 110 West 40th St., New York City. You should order the book today. It will be a revelation to you and will teach you important facts that will give you greater Physical, Mental and Organic Nerve Force. If you do not agree that this book teaches you the most important lesson on Health and Mental Efficiency you have ever read, your money will be refunded by return mail, plus the outlay of postage you may have incurred.

The author of Nerve Force has advertised his various books on Health and Nerve Culture in the standard magazines of America during the last twenty years, which is ample evidence of his responsibility and integrity. The following are extracts from letters written by grateful people who have read the book:

"I have gained 12 pounds since reading your book, and I feel so energetic. I had about given up hope of ever finding the cause of my low weight."

"Your book did more for me for indigestion than two courses in dieting."

"My heart is now regular again and my nerves are fine. I thought I had heart trouble, but it was simply a case of abused nerves. I have re-read your book at least ten times."

"The advice given in your book on relaxation and calming my nerves has cleared my brain. Before I was half dizzy all the time."

A physician says: "Your book shows you have a scientific and profound knowledge of the nerves and nervous people. I am recommending your book to my patients."

A prominent lawyer in Ansonia, Conn., says: "Your book saved me from a nervous collapse such as I had three years ago. I now sleep soundly and am gaining weight. I can again do a real day's work."

Marte station received from officers of every rank in the Italian army. It was clear to every one of us that the undertaking which we had assumed in the operation of the military buffet was thoroly justified by actual results. It was a success, not only as a business procedure but as a contribution to the well-being and the morale of the Italian soldier. With regard to the sale of wine with the food, the point on which there would be likely to arise question in the minds of some far removed from the scene of operations and unfamiliar with Italian habits of life, there was a clear moral gain in our assumption of the responsibility for the buffet. We eliminated the sale of strong drinks, which had, under the old régime, reached considerable proportions. We also found, to our gratification, that as our facilities for supplying the *minestrone* and coffee became equal to the demands upon them, the sale of wine itself decreased. Drunkenness was conspicuously absent among the soldiers who used the buffet in such crowds, a condition markedly different from that of the old times when brandy and similar hard drinks were freely dispensed there.

**T**HE other activity in our Florence field which was unique in the work of the Y in Italy was our factory for the production of games. It was conceived, planned, put into operation and managed by Henry H. Gorrell, an American who had lived in Italy for fifteen years and had made a high reputation in Italian opera as a singer of such important bass roles as Mephistopheles in "Faust." It was a curious thing to have a musician, with all that the musical temperament involves, turn manufacturer. But Mr. Gorrell was not only a musical genius, he was a mechanical genius. He rented a carpenter shop and turned it by degrees into a games factory. He invented methods of manufacture. He designed and had constructed a battery of ten jig-saws run by electric power, at which women, most of them refugees from the invaded regions, turned out something like 500 jig-saw picture puzzles a day. He devised schemes for manufacturing dominoes, checker men, and the counters used in the games of tombola, which insured rapid production at an unbelievably low cost. When the pressure became heavy, he threw off his coat and took his own turn at the circular saw or other machine, working often far into the night.

The games which Mr. Gorrell's factory produced were distributed all over Italy, wherever the Y had a station—from the front line trenches on Mount Grappa or the Adamello, to the barracks and hospitals down in Sicily, and, after the armistice was signed, in Trento, Trieste, Fiume and all the country of Italia Redenta. Wherever there were Italian troops, there were to be found soldiers diverting themselves with the dominoes, the checkers, the tombola and the picture puzzles that we made in Florence. The factory kept a steady supply of well made games going out to the Italian *soldati*, it provided games that could not be found in any quantities in the open market, and it supplied them at prices that could not be duplicated even in times of peace. It was not only a splendid service that that factory rendered; it was a fine business proposition, run efficiently and economically. Tremendous credit is due to Mr. Gorrell and to Mrs. Gorrell, who ably assisted him at every turn.

**I**N all our work with the Italian army in our field of Tuscany, there were two greatly gratifying circumstances. They were the fine measure of coöperation which we received from the military authorities, and the generous appreciation of our work

ADV.

which was constantly expressed not only by the soldiers themselves but by officers of every grade from sub-lieutenant to the Commander of the Army Corps. The letter which stands at the head of this article, from the Italian Minister of War, is just one example of many, of the way in which the contribution of the American Y to the upbuilding and preservation of the morale of the Italian army was received. The warmth of the gratitude expressed by officers and men became almost embarrassing.

The coöperation which the army authorities extended was of the same whole-hearted character. The Regional Director was always welcome in the office of the Commanding General, and in the offices of the heads of all kinds of subordinate departments. Did we need a portable cabin built for a new moving picture machine? The colonel in command of the engineers was delighted to put all the resources of his workshops at our disposal. Did we need one or half a dozen interpreters in office, *casa*, buffet or for athletic work? The Army Corps was combed to find soldiers who could speak English as we ought to have been able to speak Italian. Did the Regional Director need a secretary? There was promptly forthcoming a soldier who in private life was the proprietor of an antique shop in the Rue de la Paix in Paris, and who spoke English like an Englishman of culture. Did we need twenty soldiers to act as cooks and waiters in our buffet? A detail of splendid fellows appeared within twenty-four hours, assigned to regular service under our command. Was one of our motor cars in the repair shop? An army car appeared at our door at nine o'clock the next morning. Had we outgrown our offices? The appropriate army bureau found new ones for us, just vacated by a section of the engineers, and turned them over to us at same rate that the Government had paid. Was there any need that we could express to the army authorities and not have promptly satisfied? There was not.

In addition—as was true for the whole Y all over Italy—every Y man and woman traveled on the Italian railways first class without payment of a cent of fare. All our supplies and baggage were transported free. We obtained the gasoline and other supplies for our motor cars and camions from the military garages at army rates. The supplies for our buffet came thru the army commissary and thru the municipality. More thorough and more cheerfully generous coöperation it would be impossible to imagine.

The net result of the activities of the Y with the Italian army was the creation of a solid fund of gratitude and appreciation toward the American people. The Red Cross and the Y. M. C. A. were the two exponents of America with which the Italian soldiers and the Italian people came most intimately in contact. Both—I know from my own observation—earned for themselves and for America the respect and affection and admiration of the Italian nation. They performed a real service on behalf of Italian-American friendship and solidarity.

Enough state legislatures have responded to the peacetime appeal of the Prohibitionists: Drink to me only with thine eyes—*New York Evening Sun*.

"What are you going to do about the luxury tax?"

"Nothing much. When I get thru with the regular tax I won't have money enough to buy any luxuries."—*Washington Star*.

How's your husband getting along, Mrs. Fogarty? Well, sometimes he's better and sometimes he's worse, but from the way he grows on and takes on when he's better. Oh, thank he's better when he's worse."—*Boston Transcript*.

## For the greater production of Duplan Silks

THE Duplan Silk Corporation has factories in France and Switzerland and three mills in eastern Pennsylvania. It is quite the largest manufacturer of silks in the world and the Duplan mill at Hazleton, Pa., is not equalled in size anywhere.

Despite its size, the capacity of the Hazleton mill was not adequate to meet the demand for Duplan broad silks. An addition was planned. Haste was required.

Just before sailing for Europe in May, 1917, Mr. Duplan approved plans drawn by Lockwood, Greene & Co. and construction began at once. By the time of his return late in the year the mill was partly used for production. It was fully completed in the following January.

The building is a modern, reinforced-concrete structure with three floor levels. It is 100 x 700 feet. In laying foundations it was necessary to go through an abandoned coal mine to get firm footing. The construction was supervised throughout by Lockwood, Greene & Co.

This is just another illustration of the fact that we know industrial engineering in every phase and are able to carry through any size task—on time.

## SAVE YOUR BODY Conserve Your Health and Efficiency First

"I Would Not Part With It For \$10,000"

So writes an enthusiastic, grateful customer. "Worth more than a farm," says another. In like manner testify over 100,000 people who have worn it.

### The Natural Body Brace

Overcomes WEAKNESS and ORGANIC AILMENTS of WOMEN and MEN. Relieves aches, sprains, stiffness. Brings restful relief, comfort, ability to do things, health and strength.

Wear It 30 Days Free at Our Expense

Do away with the strain and pain of standing and walking; replace and support misplaced internal organs; correct enlarged abdomen, strengthen and strengthen the back, correct stooping shoulders, develop long, erect and fast, relieve backache, cure aches, nervousness, fatigue, constipation. Comfortable and easy to wear. KEEP YOURSELF FIT. Write for illustrated booklet, measurement blank, etc., and read our very liberal proposition.

HOWARD C. RASH, Pres. Natural Body Brace Co., 321 Rash Bldg., Salina, Kansas

## REMARKABLE REMARKS

**OTTO H. KAHN**—Liberty is not fool-proof.

**PREMIER CLEMENCEAU**—I think it is a good peace.

**CHARLES E. HUGHES**—Justice in America is not to be bought.

**GOVERNOR SPOUL**—We must not be hysterical in our patriotism.

**REV. S. EDWARD YOUNG**—I do not believe in a puritanical Sunday.

**SENATOR BRANDEGEE**—The President is out of touch with the country.

**GABRIELLE D'ANNUNZIO**—Italy is a living heroine in the midst of shame.

**RUTH MCINTIRE**—School is a canned way of bringing a boy in touch with life.

**CHARLIE CHAPLIN**—I have not used any pies in my pictures for more than a year.

**ED. HOWE**—Women cooks around a home are never as dirty as the men cooks around a hotel.

**CAPTAIN ARCHIBALD ROOSEVELT**—The value of the Plattsburg summer camp was very small.

**MARY GARDEN**—I am a woman and I accept the responsibility and the glittering opportunity.

**CYRIL RING**—In giving a stage kiss, the lips are placed in the same way as giving a genuine kiss.

**REAR ADMIRAL SIMS**—It will make interesting reading when Congress begins to probe war expenses.

**ACTRESS EUNICE BURNHAM**—I don't mean to say that some stage kisses are not pleasanter than others.

**JOHN GALSWORTHY**—The great modern fallacy is to identify the word "wealth" with the word "welfare."

**REV. HARRY P. NICHOLS**—The protest against the uneducated ministry extends from Montana to Massachusetts.

**MRS. HAVILAND LUND**—The only successful colonizers in America are the Mormons and Catholic Communities.

**SENATOR BORAH**—Article X of the Covenant is one of the most infamous things ever written by the hand of man.

**COLONEL GEORGE HARVEY**—The President in his controversy with Italy is at his middle-aged and autocratic worst.

**CHANCEY M. DEPEW**—Be your children's confidant in the love affairs, and if they are not equal to it, write their love letters.

**WILLIAM ALLEN WHITE**—No one now pretends that the story about the nationalization of women in Russia had any basis in fact.

**SECRETARY DANIELS**—The United States does not aspire to possess such sea strength that we can impose our decrees arbitrarily upon free people.

**CHARLES H. GRANTY**—I believe that if the President had not been in a position to act with the backing of such a nation as America war might have been going on for the next fifty years.

**VICE PRESIDENT MARSHALL**—Large numbers of those who are now opposing the League of Nations are the intellectual descendants of those men who characterized

the Constitution of the United States as a "covenant with death" and a "league with Hell."

**REV. "SANDY" MCGALLIN**—No capable business man would tolerate a moment longer in the management of business such a duplication of plants, machinery, staffs and expenditures as marks the administration of Christ's business everywhere on earth.

## FLAG ETIQUETTE

It is important to know just how a loyal American citizen is expected to act toward the flag and the rules regarding behavior and courtesy due the flag. Here is the flag etiquette as authorized by the United States.

When the colors are passing, the spectator, if a man, should halt when walking, arise if sitting, and uncover, holding the headdress opposite his left shoulder with the right hand; if bareheaded he should salute with the right hand. A woman should stand at attention as the flag passes by. When the flag is waving from a stationary flagstaff or pole it is not saluted with the hand.

In decorating, the flag should never be festooned or draped, but always hung flat. If hung with stripes horizontal, Union should be in the upper left hand corner. If hung perpendicularly, Union should be in upper right hand corner.

When the flag is carried in parade or when crost with other flags the Stars and Stripes should always be on the right hand side.

The law specifically forbids the use of any representation of the flag in any manner or in connection with merchandise for sale.

The flag should be raised at sunrise and lowered at sunset. It should not be displayed on stormy days or, except when under fire of the enemy, left out over night. Altho there is no authoritative ruling which compels civilians to lower their flag at sundown, good taste should impel them to follow the traditions of the army and navy in this sundown ceremonial. Primarily, the flag is raised to be seen, and secondarily, the flag is something to be guarded, treasured, and so tradition holds it shall not be menaced by the darkness. To leave the flag out at night unattended is proof of shiftlessness, or at least carelessness.

On Memorial Day, the flag should be displayed at half mast from sunrise until noon, and at the peak from noon until sunset. It should, on being retired, never be allowed to touch the ground.

When the "Star Spangled Banner" is played or sung, uncover, stand and remain standing, *in silence*, until it is finished.

Applause at the conclusion of the "Star Spangled Banner" is out of place.

Worn out and useless flags should be destroyed by burning and never disposed of in any other way.

A flag torn or frayed by the wind and weather should never again be hoisted until it has been repaired. This is a regulation of both the army and the navy and the rule should also be followed by all civilians.

Prepared by the National Committee of Patriotic Societies, Washington, D. C.

# WHY GERMANY MUST PAY

*This photograph, taken before August, 1914, shows the workroom of a prosperous factory making zinc products in Lille, France*

*Photographs © Underwood & Underwood*

*The German occupation of Lille left only these shattered walls to mark the factory site. The machinery had for the most part been removed, not destroyed. This photograph, it is interesting to note, was taken from exactly the same spot as the one above*

## REPUBLICAN CONTRIBUTION TO THE COVENANT

**I**F only the Republicans had the wit to serve their party and the world by coming out in favor of the Covenant as now amended, it would be good political strategy. Then instead of a fight which would do nobody any good, we should have both parties competing for the credit and honor of having originated, popularized, amended and ratified the League of Nations.

It is well for the Republicans to remember that Messrs. Taft, Lodge, Hughes and Root, easily their most influential and competent men, have all made suggestions for the improvement of the Covenant and that these have been substantially adopted in the revised draft by President Wilson and the Peace Conference.

All four urged that (1) the Monroe Doctrine be specifically recognized, (2) domestic questions be reserved from the jurisdiction of the League, and (3) secession be permitted.

Messrs. Taft, Lodge and Hughes suggested that (1) the language of the Covenant be revised, and (2) the Council should act by unanimous vote.

Mr. Root proposed that (1) justiciable questions be referred to arbitration, (2) they be defined, (3) provision be made for a general conference to formulate international law, (4) any nation may be relieved of its obligation to guarantee independence of League members after five years, (5) the League shall have full powers to inspect armaments, and (6) the Covenant shall be revised at the end of five or ten years.

Mr. Hughes advised that (1) no nation shall be a mandatory without its consent, and (2) the provision for the

guarantee of the independence of League members as against external aggression be entirely stricken out.

A comparison of the tentative draft of February 14 with the revised draft of April 28 shows that the Conference has adopted in toto the three suggestions in which the four distinguished Republicans concur as well as the two recommendations in which Messrs. Taft, Lodge and Hughes unite. In addition they have completely incorporated Mr. Root's second and Mr. Hughes's first point, whereas Mr. Root's first, third and sixth points are substantially recognized in the original draft. They have failed to adopt only Mr. Root's fourth and fifth points and Mr. Hughes's second.

In other words, in the five cardinal instances where more than one of these eminent, constitutional lawyers have united on any particular point their recommendations were adopted, whereas in the less important cases where only one man made the suggestion, two were adopted, three were already partially recognized and but three were rejected.

It is perfectly clear, therefore, that as all of Mr. Taft's and Mr. Lodge's five suggestions have been accepted, and as Mr. Hughes got six out of his seven points and Mr. Root four out of his nine, with three partially recognized, the Republican party need not worry about its prestige in the peace negotiations in the coming Presidential election. In fact it would not be stretching a point too far for the Republicans to welcome the new draft as a Republican victory. If they do not claim it is a victory they will have to accept it eventually as a defeat, for as President Wilson has well said: "No party has a right to appropriate this issue and no party will in the long run dare oppose it."

## THE BERNE BASIS

**T**HE request of the German plenipotentiaries that the resolutions of the Berne labor congress be made the basis for the League of Nations turns attention toward this neglected program. The attempts of certain socialists of the belligerent nations to hold an international congress at Stockholm or elsewhere during the war was frustrated by the Allied governments, but in February such an assemblage was held in Switzerland attended by delegates from France, Great Britain, Germany, Sweden, Belgium, Russia, Holland, Argentina, Austria, Ukrainia, Canada, Hungary and other countries. On account of the abstention of such conspicuous leaders as Vandervelde of Belgium and Gompers of America and the refusal of the socialists of certain countries such as Switzerland to name official delegates, the Berne meeting was more of a conference than a convention and could not be called as truly representative as the Internationals before the war. But those in attendance claimed to speak for more than fifty million men and women and at any rate their

debates and conclusions are worthy of greater attention than they have received. It cannot be called a Bolshevik group because it expressly condemned Bolshevism and was in consequence anathematized by Lenin.

Altho the United States was not represented at Berne and was represented at Paris yet the Berne program in many respects comes nearer to American ideals. For instance in regard to the League of Nations the Berne resolution reads in part:

The war just terminated has brought civilization to the edge of the abyss. The next war would destroy it completely, and even the preparation for the next war threatens it with destruction. This disaster can only be prevented by the creation of a League of Nations.

This League of Nations must be based on a real peace of justice, which will not give rise to any conflict. The League should be formed by the parliaments of the different countries and representation in the central organ of the League shall be, not by delegates of the executive branches of the governments of the constituent states, but by delegations from the parliaments representing all parties therein, assuring thus not an alliance of

governments, but a union of peoples. All the nations organized on the basis of national self-determination should be included in the League of Nations.

The League of Nations must abolish all standing armies and bring about complete disarmament. If any armed force should be required, it shall be under the control of the League.

The League of Nations must further prevent all economic war by the establishment of free trade, free access to all countries, the open door to colonies and the international control of world commerce. Wherever national tariffs exist, they shall apply equally to all countries. The League must be given the power to develop into an authority controlling the world's production and world distribution of foodstuffs and the raw materials with the view of bringing the production of the world to the highest grade of efficiency.

The League of Nations shall have the right, after consultation by plebiscite, to satisfy any new claims of nationalities or parts of nationalities which desire to modify their frontiers.

That the League of Nations should be a Union of Peoples rather than an Alliance of Governments is what The Independent has already urged, but altho the Paris draft does not come up to our wishes in this respect we hope that it will be adopted for we believe that it will ultimately develop into a truly democratic organization.

It will be noted that the Berne platform does not use the term "free trade" in the ordinary sense of "unregulated trade" but on the contrary it proposes to substitute for selfish and discriminatory tariffs a world-wide control of the sources of raw materials and their utilization. Such a plan is of course not practical politics at present but it is a forward-looking resolution and strikes directly at the root of the Great War.

The clause providing for the possible shifting of boundaries and changes of allegiance in the future at the will of the population concerned would meet the chief objection raised against the Paris Covenant, namely that it seems to perpetuate and guarantee the boundaries now fixed.

In its labor charter the Paris Treaty follows the Berne resolutions more closely than in regard to the League of Nations. The Berne platform calls for:

Compulsory primary education and free higher education.

No industrial employment under fifteen. Persons between fifteen and eighteen to be limited to a six hour day and have two hours' continuous teaching.

Prohibition of night labor for women. Equal pay for men and women for the same job.

Workers to have a continuous weekly rest of thirty-six hours.

Regulation of dangerous trades. Restriction of home work.

Right of free combination and free emigration. Illiteracy test for immigrants allowed.

Insurance for accidents, unemployment, old age, disablement, etc. Workers represented on official boards.

The cables report that International Socialists of France and the Independent Labor party of England are opposing the treaty because it does not conform more closely to the Berne program. This in our opinion is unwise because the Covenant as it stands, tho naturally it suits nobody altogether, is the greatest step that humanity has ever taken in the direction of the joint protection of small nations, minorities and individuals the world over. It is now under fire from both the conservative and radical side, by those who think it goes too far and those who think it does not go far enough, so we may assume that it comes pretty close to the golden mean of what is practical at present.

## THE CONGRESSIONAL GAP

A bill is to be introduced into Congress soon after it meets to change the date of the assembling of each new Congress. A more sensible proposal it would be difficult to imagine. Under the present practise a new Congress meets thirteen months after it is elected. What may not happen in a year and a month?

What may happen is illustrated this year. The voters last November decided that they wanted a Republican Congress; so they elected one. This presumably meant that they were not thoroly satisfied with the Democratic policies which the old Congress, with its Democratic majority in both

houses, was putting into effect. But, in the ordinary course of events, the new Republican Congress would not meet until next December. Only the President could convene it sooner, in executive session. But the President, being a Democrat, would naturally be a little reluctant about bringing together a Congress with Republican majorities in both houses.

Fortunately, Mr. Wilson has been broad-minded enough to let his realization of the importance of an early meeting of Congress overcome any tinge of partizan reluctance that he might have had.

So it is all right this time. But the system itself is bad.

The bill which is proposed will call each new Congress together on March 5, four months after its election. This is very much better than the present ridiculous thirteen months interval. It has the further advantage of giving to each Congress three sessions instead of two. The Congress which legislates for 110,000,000 people has plenty to do. It needs all the time it can get in which to do it properly.

The proposed change is so undebatably good that it is a wonder it took so long to have it considered seriously.

## WHY IS A BURLERSON?

SOME time in 1918 the Rand School of Social Science published in a little pamphlet a translation of "The Soviets at Work," by Nikolai Lenin, the Premier of the Russian Soviet Republic. The pamphlet was promptly excluded from the mails by the Burleson censorship. It was excluded presumably because it was a defense of Bolshevism by the arch-Bolshevik.

But one cannot help wondering if the postal censor read it.

For there has just come to hand a communication from the Secretary of Labor of the United States in which he calls attention to this pamphlet by Lenin, quotes largely from it, and points out what sledge-hammer arguments against Bolshevism are to be found in the admissions and the contentions of the arch-Bolshevik himself.

Secretary Wilson is perfectly right. The best possible tract against Bolshevism is this frank statement by Nikolai Lenin.

But, according to the ruling of the postal censor, it may not be sent thru the mails.

What is the matter?

Either the censor didn't read it.

Or the censor is hopelessly stupid.

Or the censor is a Bolshevik.

Or Burleson is—well, Burleson.

We suggest the consideration of these alternatives for the first Cabinet meeting after the President's return, with Mr. Burleson and Secretary Wilson leading the debate.

## THE SCHOOL FOR STATESMEN

DEMOCRACY succeeds in the degree to which the citizens are accustomed to unite in voluntary association. The isolated individual, the human atom, is a poor citizen because he has never learned coöperation. The slave of an omnipresent state is a poor citizen because he has never learned responsibility.

There are only two human institutions to which we are all born. We are born into the family. We are born subject to the authority of a government. But in between the family and the state are a thousand types of human association more or less voluntary, in which we may accept or refuse participation, such as the church, the trades union, the business firm, the coöperative association, the political party, the fraternity, the club, the literary society and so on indefinitely. It is in these tiny republics that self-government is learned. The ancestor of American democracy was the Congregational Church. The ancestor of woman suffrage was the woman's club.

It is therefore characteristic of every stable democratic

government that the widest possible scope is given to voluntary association. The state is not jealous of her sister organizations. The same spirit of coöperation, conciliation and the technique of parliamentary law which makes workable the Alexander Hamilton Debating Society of the Lakeside District School or the Galveston Local of the Amalgamated Coppersmiths' Trades Union would suffice to rebuild our whole commonwealth if it were wrecked.

Every despotism, on the other hand, sees in voluntary association a deadly rival to the claims of the state. In Russia a man might, indeed must, belong to the state and its administrative subdivisions, enter the army, support the state church, study (if anywhere) in the government schools. But every voluntary organization, however innocent in its pretensions, was regarded as a center of revolutionary propaganda. Political parties and propagandist associations were, as a matter of course, reckoned treasonable. The churches, except the state church, were covertly persecuted. Business and labor organizations were discouraged; the latter, indeed, were usually forbidden. Even literary and athletic societies were compelled to meet in secret. Voluntary organizations formed to carry on relief work during the war were hampered by the interference of suspicious officials. Is it any wonder that the Russian people never learned self-government?

In Central Europe conditions were but little better. The German and Austrian Governments did, indeed, come to permit the formation of purely social or economic associations, except when persons of some subject nationality were concerned in them. But at every meeting where politics, or anything verging on a discussion of political problems, was to the fore, the police were there with sabers and notebooks. The whole liberal movement in Germany to 1848 was a prolonged combat between the student fraternities and the governments which forbade them. The boast of the state was that it stood above the parties; people in the Fatherland were to be ruled by bureaucrats who gave orders, not by party leaders who bargained and sought votes. Party government, which existed in England continuously since the time of Charles I, never existed in Germany until the elections of 1919 which placed Herr Ebert in office, the first German in history to rest his title to rulership on a party victory at the polls.

Liberalism is a word with many meanings. The shortest definition of political liberalism is that it is that form of government which most tolerates and encourages those forms of human association which do not share the powers of coercion which belong to the state.

## AMERICA'S SHAME

**H**ERE are some of the facts presented to the National Council of Lynching that was held in New York last week:

During the past thirty years 3224 persons have been lynched in the United States, distributed as follows: From the North 219, from the South 2834, from the West 156, from other localities 15. Of the states Georgia leads the infamous ascendancy with 386 victims, followed by Mississippi with 373, Texas with 335, Louisiana with 313, Alabama with 276, Arkansas with 214, Tennessee with 196, Florida with 178, and Kentucky with 169. Fifty colored women and eleven white women have been put to death by mob violence in the United States. Less than one in five is lynched for "the usual crime." Since President Wilson made his earnest appeal to the people to stop lynching, especially while the United States was fighting to make the world safe for democracy, 63 negroes (five of them women) and four white men have been killed.

There is nothing Japan has done to the present Korean revolutionists, or that England has ever done to Ireland, or even that Germany has done to Belgium, that can equal in depravity and barbarity America's record for lynching.

## THE MAIDSERVANTS' MAGNA CHARTA

**W**HAT we may expect if the socialistic wave of Europe sweeps westward is foreshadowed by the rules for the engagement of maidservants laid down by the Central Committee of the Berlin Labor Bureau. These provide that

Servants may be on duty for 13 hours a day, of which two hours must be free for meals.

No special duties may be imposed after 7 o'clock in the evening, and additional work due to parties or visitors after 8 o'clock must be paid at the rate of 12 cents per hour extra, and at the rate of 18 cents per hour after 10 o'clock.

Servants must be off duty every second Sunday from 3 p. m., and on one afternoon per week for at least four hours after 4 o'clock.

No deductions may be made from servants' wages for breakages, except in cases where they are proved to be deliberate.

Each servant must have a separate bed and a locked closet or chest for her clothes.

To an American these requirements seem reasonable and the wages moderate. The relation between the mistress of the household and her hired help have never been free from friction and possibly the extension of unionism to domestic service may tend to reduce that friction by removing the element of personal caprice which is its chief cause.

## EARLY MORNING

**T**HOSE who are pessimistic because of the anarchy and confusion which prevails over so large a portion of our planet should reflect that the human race is in the position of a tenant who has just moved into a new house. Of course the furniture is a bit upset; the teakettle is on top of the phonograph, the dessert spoons have fallen behind the bureau, the parlor chairs are still in the moving van, and nobody can find the tablecloths. Geologists tell us that this earth of ours has been a habitable place for several million years and will (barring accidents) continue a pleasant home for several million years to come. Our civilization, on the other hand, is a mere thing of yesterday; no wonder it still looks like a cross between a shipwreck and an influenza epidemic.

As recently as a hundred and fifty years ago every powerful State in Europe was an absolute despotism, except England, Holland and Sweden, which were then corrupt oligarchies. Democracy hid in holes and corners, such as a few Swiss cantons or backwoods colonies in America. Asia, Africa and Australia were untouched by European civilization, if we except the influence of a few trading companies. The steam engine was just making its first bow to the world and the stage coach was still the most rapid means of transportation. The general condition of the people in the most advanced countries was about what it is today in central Russia or in Asia Minor; the countryside was peopled with illiterate serfs subject to frequent famines, the cities were reeking slums without lighting or sanitation. By present standards civilization did not exist.

It is hard to realize that only in the year 1919 did so obvious a measure as a league of nations become practical politics, and that at no time until that year did the map of central or eastern Europe correspond at all to the map by nationality. But it is equally hard to realize that Germany and Italy are only half a century old, that Japan has been one of the Powers for only two decades, that within the memory of living men Africa was an almost unknown continent and the western half of the United States a virgin wilderness. It is a commonplace saying that half the world does not know how the other half lives; but until the time of Columbus half the world did not even know where the other half lived.

We have just finished looking over our world home and are still planning the rooms. The furnace has just been installed. The wall paper is not yet selected. Just a little patience, just a little hard work and our earth will be a very presentable homestead. It is still early morning.

# THE STORY OF THE WEEK

**A Week of Mourning** The peace treaty came as a stunning blow to the German people, for even the most pessimistic had not imagined that the terms would be so severe. The treaty will reduce the German Empire to about one-eighth of its former size by taking away all of the colonies and some 17,000 square miles of European Germany. The European territory thus alienated contains 70 per cent of her iron ore, 33 per cent of her coal and 20 per cent of her potash. The German Government has decreed a week of mourning during which the theaters, race courses and cabarets shall be closed and no dancing or other frivolity indulged in. The Government manifesto declares that the German people laid down their arms and submitted honestly to the uncommonly hard terms of the armistice, trusting in the promise of the Allies that peace would be made on the principles enunciated by President Wilson.

Instead of that, the Allies have now given us peace terms which are in contradiction to the promise given. It is unbearable for the German people and is impracticable, even if we put forth all our powers. . . . The world would be obliged to bury every hope of a League of Nations liberating and healing the nations and insuring peace.

The dismemberment and mangling of the German people, the delivering of German labor to foreign capitalism for the indignity of wage slavery and the permanent fettering of the young German republic by the Entente's imperialism is the aim of this peace of violence. The German people's Government will answer the peace proposal of violence with a proposal of a peace of right on the basis of a lasting peace of the nations.

All parties agree in condemning the treaty as may be seen from the utter-

ances of their public men. President Ebert: "History holds no precedent for such determination to annihilate completely a vanquished people." Frederick Stampfer, editor of the Socialist *Vorwarts*: "The two vanquished parties in this war are the German people and the American idea." Theodor Wolff, editor of the Liberal *Tageblatt*: "No, we cannot sign this contract unless it is materially altered. It surpasses our worst apprehensions." Prince Lichnowsky, former Ambassador at London: "This is a peace of violence. It would be equivalent to Germany's annihilation." Mathias Erzberger, head of the armistice commission: "The propositions made to us are unacceptable and unrealizable." Count von Bernsdorff, former Ambassador at Washington: "One thing for which we have the Allies to thank is that the conditions are such that we need fear nothing worse if we reject them." Prof. Hans Delbrück: "We will open our gates to Bolshevism before we will sign such a peace."

**The German Protests** Premier Clemenceau in delivering the treaty declared that no oral discussion of the terms would be allowed, so the German delegates are confined to writing notes. In the first of these Count von Brockdorff-Rantzau claims that the German delegates on preliminary perusal have had to realize that the basis of the peace of right agreed upon between the belligerents had been abandoned:

They were not prepared to find that the promise, explicitly given to the German people and the whole of mankind, is in this

way to be rendered illusory. The draft of the treaty contains demands which no nation could endure. Moreover, our experts hold that many of them could not possibly be carried out.

To this the representatives of the Allied and associated powers replied that

They have formulated the terms of the treaty with constant thought of the principles on which the armistice and the negotiations for peace were proposed. They can admit no discussion of their right to insist on the terms of the peace substantially as drafted. They can consider only such practical suggestions as the German plenipotentiaries may have to submit.

In the second note the German delegates "call attention to the discrepancy lying in the fact that Germany is called on to sign the statute of the League of Nations as an inherent part of the treaty and on the other hand is not mentioned among the states invited to join the League." In the Allied reply to this it is pointed out that the admission of additional states is provided for in the second paragraph of Article I.

The third German note asks that the details for the return of German prisoners be referred to commissions for oral discussion as is customary even during hostilities.

The fourth note presents the request of the labor unions of Germany that the resolutions of the International Trades Union Conference held at Berne last February be made the basis of labor conference to meet immediately at Versailles. The German delegates hold that the nine provisions for the protection of labor embodied in the treaty do not go far enough in meeting the demands of social justice and claim that "these

Brown in the Chicago Daily News

ROUGH GOING

high demands have for the most part already been carried out in an admittedly exemplary fashion in the German Empire."

**Arrival of the Austrian plenipotentiaries to the Peace Conference** arrived at St. Germain-en-Laye on the evening of May 14. The representatives of the French and Allied governments gave them a more friendly reception than to the German delegates. The party first arriving numbers about sixty. At the head is Dr. Karl Renner, the Chancellor of Austria. Among his associates are Dr. Franz Klein, Peter Eichhoff, Dr. Richard Schuler and Professor Lammasch. The headquarters of the Austrian delegation will be the Palace of Francis I at St. Germain-en-Laye, now used as a national museum. The delegates are housed in adjoining villas.

The rumor that the delegates were induced to come back to Paris by the proffer of a compromise on the Fiume question is now denied, and so far no settlement of the Dalmatian difficulty has been negotiated. Meanwhile Italian forces in large numbers have been landed at Zara and Sebenico, on the coast of Dalmatia, in order to hold the territory assigned to Italy by the Pact of London.

**The Conquest of Hungary** The signing of the armistice was followed by the overthrow of the Hapsburg monarchy and the establishment of a republic in Hungary under the presidency of Count Karolyi. But it was found impossible to confirm this government by a general election, for fifty-eight of the sixty-three counties of Hungary were occupied by enemy forces. Rumania claimed the right to annex twenty-six counties and the Czechoslovaks and Yugoslavs almost as many more, so that Hungary was deprived of nearly two-thirds of her original territory. All during the winter the Hungarians petitioned to the Paris Conference for a peace on the American principles and protested against the continual encroachments of the Allied troops beyond the limits prescribed by the armistice. The Social Democrats who were striving to prevent the Bolsheviks from getting control at Budapest appealed to the workers of the world in these words:

The Entente, which promised to liberate the world from the yoke of German absolutism, has subjected Hungary to the greedy clutch of Rumanian, Serbian and Czechoslovak imperialisms.

These imperialisms represent a degree of development inferior to that of the Hungarian democracy. The People's Republic established the most complete liberty of the press, of association, and of assembly. The troops of occupation suppress the right of association and of assembly and impose a censorship of the press. The People's Republic has a social policy—the liberty of association and freedom of labor. The troops of occupation destroy our social policy, shackle our private associations and in the place of liberty of labor establish a new serfdom.

We are not pleading for integrity of territory. What we demand is the integrity of democracy. We do not say that we will refuse to cede a morsel of Hungarian territory, but we do say that they cannot cut

#### AN OVERSEAS COMMANDER FOR WEST POINT

Brigadier General Douglas MacArthur, who won recently both the French War Cross and the Distinguished Service Cross for heroism in action, is one of the youngest officers ever appointed to command the United States Military Academy at West Point. He was chief of staff of the Forty-second (Rainbow) Division during the first part of America's participation in the war and he was later made commander of the Eighty-fourth Infantry Brigade of that division.

Hungary up into pieces against the will of the people and without a referendum to secure an expression of the people's will.

But no help or assurance of help came from Paris while the condition of the country became more distressing, so finally on March 25, Karolyi threw up his job in despair and a Soviet or Communist Government came into power under the leadership of Bela Kun, a disciple and associate of Lenin. This, however, was the signal for an increase of activity on the part of the Allied armies, since it was feared that the Russian and Hungarian Bolsheviks might get together. The Rumanians from the east crossed the Theiss River. The Czechoslovaks from the north crossed the Danube. The Serbs from the south crossed the Drave. All three armies, aided by the French, advanced toward Budapest until the city was encircled. Bela Kun offered to grant all the territorial concessions demanded but too late. He declared that even though the Commune must fall it should go out in a blaze of glory so that the people should at least remember forever what had been tried. So the artists and artisans of the capital were set to work to get up an unprecedented May Day celebration and \$3,000,000 was appropriated for the purpose. The city was hung with red and lighted at night by red electric lights. Gigantic banners bore such inscriptions as "This is the day of freedom and world brotherhood." Statues of Marx and Lenin, twenty feet high,

were erected in the squares. All day and all night revolutionary hymns were played and Bolshevism preached from the stands on the streets.

It is now reported that the advance of the Rumanians and Slavs has been halted by the Allied council and the Hungarians requested to send delegates to Paris.

**The Communist Régime in Hungary** Since the communistic government of Hungary has only lasted two months, there is no knowing how it would have worked, but the development of its program is of interest. In general it was modeled after Russia, but, profiting by the experience of the Bolsheviks, was able to avoid some of their early mistakes. As in Russia, all power was placed in the Soviet or Council of Workers', Peasants' and Soldiers' Deputies. This body exercised legislative, judicial and executive functions thru five People's Commissaries.

Efforts were made to raise a Red Army to withstand the invaders. Volunteers were called for and offered \$110 a month and keep. Many of Mackensen's officers took service under the Soviet but the Red troops, hastily organized and ill equipped, gave way before the Rumanians or deserted to them.

The first act of the Communists was to abolish all ranks, titles and decorations and to remove all the old religious and racial discriminations. Alcoholic liquors were prohibited. Woman suffrage was established. Church buildings were taken out of the hands of the hierarchy and placed under the control of the parishioners. Priests of all sects were to be paid from communal funds the same as school teachers. The censorship of the press was removed, but papers of all parties were obliged to publish the official statements of the Government. The Government announced that it would not interfere with the marriage system except to make legal what is known in America as common law marriage and to remove the stigma from illegitimate children.

All men and women over eighteen were allowed to vote except merchants, priests, monks, criminals, those who employed wage-earners for profit and those who lived on unearned income. This established class rule and kept the political power in the hands of the proletariat. Bread tickets like ballots were restricted to those doing work of some sort or incapable of it.

All industrial establishments employing more than twenty workmen were placed under the control of the workmen themselves. All industries of the same sort were to be brought into one big trust under the management of an expert. Competition was to be abolished and coöperation made compulsory.

All landed estates of over 200 acres were seized and divided among the tenants and laborers. The villas of the Hungarian nabobs were commandeered and filled with the children of the proletariat. No bourgeois family was allowed to occupy more than three rooms

so long as other families in the vicinity had less room. The fashionable Jockey Club of Budapest was converted into a dining room and the race course plowed up for potatoes. Palaces were used for workmen's clubs.

All banks were promptly placed under the control of the Government. No depositor was allowed to draw out more than \$100 at a time except for the payment of salaries. Any person owning jewelry worth more than \$500 was required to turn it in to the Government. This brought in gold and precious stones to the value of \$60,000,000 during the first week.

**Okwawa's Skull** A good deal of speculation and some amusement has been aroused by the insertion in the peace treaty of a demand for the delivery to His Britannic Majesty's Government of the skull of the Sultan Okwawa. Library telephones were kept jingling for days by anxious inquirers who never before had manifested an interest in African history.

Actually the recovery of the skull is not so trivial as it seems. It is not like the return of the altar piece of Dirk Bouts, a mere matter of sentiment, for the skull of the defunct chieftain is to the natives a symbol of sovereignty and as such the key to a territory nearly twice the size of Germany. When a Bantu chief dies he is buried, but after a year his eldest son or whoever aspires to succeed to his authority digs up his skull and makes sacrifice with a libation of goat's blood, milk and honey. The son then carries away the skull and hides it, believing that so long as it is in his possession he inherits the power and wisdom of his father. But if another man should get it he might lay claim to the kingship. That is, it has the significance of a crown or signet ring among peoples a shade more civilized. This particular skull has more than ordinary significance. It corresponds in importance to the Stone of Scone in Westminster Abbey or the Iron Crown of Lombardy.

For Okwawa, otherwise known as Quawa or Kwawa Makinga, was the national hero of the Wahehe tribe. The Wahehe live to the northeast of Lake

Nyasa and are related to the Zulus. About 1870 they came under the rule of a young and energetic chief, Okwawa, who established a stronghold at Iringa in the highlands and then took the war path. In 1883 Okwawa conquered the Masai at Ugogo. In 1888 he was victorious at Yombo.

In 1891 the Germans sent out a punitive expedition under Lieutenant Zelewski, but this was ambushed at Lugalo on August 17 and almost annihilated like Custer's troops at Little Big Horn. A second German expedition under Lieutenant Brüning was more successful and defeated the Wahehe at Kilossa, October 6, 1892. Two years they were besieging Usseke, but Governor von Schele drove them back and captured their capital at Iringa.

Within a month the indefatigable Okwawa struck back at the Germans at Mage and it required a third expedition, under Captain Prince in 1896, to drive him out of his homeland to the west. A price was put upon his head by the Germans and his followers gradually fell away as the German forces hunted them down. After two years of this outlaw life Okwawa gave up in despair and shot himself at Pagawa.

The death of Okwawa caused great rejoicing in Germany, for it opened up for colonization the only part of German East Africa suited for settlement by Europeans. A capital was built at Tabora on the edge of the highlands and a railroad had just been opened from the coast to Lake Tanganyika when the war broke out. Altho there were only three or four thousand Germans in the country and they were cut off from outside help they managed to hold out for more than four years till the armistice in spite of the combined attacks of the British, Boers, Portuguese and Belgians from all sides. But the natives will never believe that the sovereignty has been transferred to King George until he gets the skull of the Sultan Okwawa.

**Egyptian Nationalism** The quotation by President Wilson of the phrase in the preamble of the Declaration of Independence about government being based upon "the consent

of the governed" was received by the outside world as the proclamation of a new gospel and was caught up as the slogan of nationalist movements in various parts of Europe, Asia and Africa. In Egypt the advocates of native independence have taken occasion to precipitate riotous demonstrations apparently for the purpose of impressing the Peace Conference while in session at Paris. During the war Egypt was transferred from the Ottoman Empire to the British Empire, tho the change of sovereignty was merely nominal, for it had been actually under British administration for twenty years.

But as soon as the restraints of the war régime were removed agitation for the abrogation of British rule revived. The establishment by the British of an Arab kingdom has caused the Mohammedans of neighboring Egypt to aspire to similar dignity. On the other side of Egypt in the Sahara Desert the militant Mohammedan fraternity of the Senussi are always ready to give armed aid to any measure for the advancement of the faith. With the Mohammedans are associated a few representatives of the Coptic Christians in order to give the semblance of a nationalistic rather than a sectarian movement.

In November a deputation of Egyptian Nationalists called at the British Residency, which is the real seat of government, to demand that they should be allowed to go to London and present a petition for complete autonomy. This request was refused by the British authorities who held that

while sympathizing with the idea that the Egyptians should be allowed an increasing share in the government of Egypt, they could not abandon the responsibilities for order and good conduct in Egypt and of safeguarding the rights and interest of the native and foreign populations and that therefore no useful purpose would be served by the leaders coming to London.

Then the Prime Minister of the native government, Hussein Rushdi Pasha, took the part of the Nationalists and suggested that he and the Minister of Education, Adyi Yeghen Pasha, go to London to consult the British Government on urgent affairs. The reply to this was that the two ministers would be very welcome but had better post-

#### THE FUTURE CAPITAL OF THE WORLD

In our issue of April 26 we published the news that the city of Geneva had been chosen by the peace conference as the capital of the League of Nations and presented a photograph, supposedly of Geneva, that had been wrongly captioned by the photographer and which proved to be a similar view of the city of Zurich, Switzerland. The photograph above gives a general view of Geneva with Rousseau's Island in the foreground and Mont Blanc in the distance.

#### THE TRANS-ATLANTIC AIR ROUTES

The nearer one gets to the North Pole, obviously, the shorter is the distance round the world. With this in mind and with the advantageous position of Newfoundland as a point of departure British airmen have proposed these routes for a trans-Atlantic flight. The American navy planes are also using Newfoundland as a starting point and have stations established in the Azores and at Queenstown

pone their visit until the British Ministers had returned from Paris and could devote their attention to Egyptian affairs. The Egyptian ministers took offense at this and tendered their resignations to the Sultan. The British High Commissioner, Sir Reginald Wingate, was recalled to London in January to explain the situation and an attempt was made to conciliate the two ministers by inviting them to London in February. But they refused to come unless the Nationalist delegation could come with them. Thereupon the British authorities tried to put a stop to the rising disaffection by deporting four of the Nationalist leaders. Chief among them were Said Zaghlul Pasha, formerly Minister of Education and Justice and the elected Vice-President of the Legislative Assembly, and Osmail Sidky Pasha, formerly Minister of Religious Endowments. These, with two other prominent men, were secretly arrested and shipped over to Malta.

**Egyptian Disorders** But the deportation of the Nationalist leaders did not have a quieting effect; quite the contrary. The students of El Azhar, the greatest Mohammedan college in the world, started anti-British demonstrations and were joined by the men from the railroad shops and other sympathizers. A mob of 10,000 paraded the streets of Cairo and shouted for freedom before the American and French agencies and the Sultan's palace. The Egyptian lawyers went on a strike and blocked the operations of the courts. In Egypt judicial proceedings are carried on in Arabic according to the French code before British judges. The telegraph operators also struck and the wires were cut.

The British commandant issued orders that any one caught interfering with telegraphic or rail communication should be shot on the spot but this seemed rather to stimulate such depredations. Railroad tracks were torn up on all sides, tramways and trains stopped, stations looted and telephone and telegraph wires cut. Cairo and

Alexandria were for a time kept in communication only by wireless and airplane. At Zagazig, a town on the railroad leading to the Suez Canal, an independent republic was declared. A passenger train coming down from Luxor was held up by peasants, who took off nine British officers, beat them to death with sticks and stones, stripped their bodies and threw them back on the train.

Most alarming of all were the raids of the Bedouin into the Nile Valley. The tribesmen of the Baharia Oasis invaded the province of Fayum and attacked the town of Beni Suef, seventy miles south of Cairo. The English and American residents, including women and children, were defended only by the garrison of fifty Indian soldiers with machine guns, but after a siege of four days they were rescued by a steamer. The flying boat "America" carrying four passengers patrolled the Nile and rendered relief to isolated stations. Armored motor cars were employed to protect the railroad. Airplanes were found most efficacious in dispersing street mobs and Bedouin bands.

In Cairo the disturbances increased. The American refugees, who numbered 2500, narrowly escaped total massacre by the Egyptians. In the riots of April 3 the troops, in firing on the mob, killed nine and wounded fifty; in the riots of April 9-10, there were thirty-eight persons killed and one hundred wounded. General Allenby, conqueror of Palestine, has been recalled to Egypt and made Special High Commissioner with supreme civil and military authority. At the same time that these strong measures are being taken to put down revolt the British Government is trying to conciliate the Nationalists by permitting Zaghlul Pasha and his associates to leave Malta and go to Paris.

Their hope of securing American support for their rebellion has been met by notification delivered to General Allenby by the American Consul General at Cairo

that the President of the United States recognizes the British protectorate over

Egypt, which was proclaimed by His Majesty's Government on December 18, 1914. In according this recognition, the President must of necessity reserve for further discussion details thereof, along the question of the modification of any rights which may be entailed in this decision. In this connection, I desire to say that the President and the American people have every sympathy with the legitimate aspirations of the Egyptian people for a further measure of self-government, but they view with regret any effort to obtain a realization of those aspirations by a resort to violence.

**The Hares and the Tortoises** For several weeks now two British aeroplanes with their crews of two men each have been champing the bit up in Newfoundland waiting for favorable weather to start on an attempted flight across the Atlantic. But the weather has refused to be favorable. The two British pairs of fliers are going at the matter in an eminently "sporting" style, since they are trusting to nothing but the ability of their fast machines to fly the 2600 miles from Newfoundland to Ireland without mishap.

The British aviators are naturally anxious to get away and to have a try at least at being the first to go from America to Europe by air. In addition there is the prize offered by the *London Daily Mail* of \$50,000 for the first successful trans-Atlantic flight.

Meanwhile, the United States Navy is going about the same matter in a more practical, if possibly less sporting, manner. Last week three regulation Navy seaplanes, each with a crew of six, set out from Rockaway Beach, on Long Island, to fly first to Newfoundland and so on across the Atlantic. Two of the planes reached Halifax, a distance of 540 miles, in nine hours without incident; but the third was compelled to stop at Chatham on Cape Cod for repairs and adjustments. The two planes which reached Halifax without interruption of their journey started again the next morning and went on to Trepassy in Newfoundland, where the final "hop off" for the trans Atlantic flight is to be made. The

run to Trepassey, a distance of 460 miles, was made by one of the planes in seven and a half hours, while the other was obliged to return to Halifax for slight repairs to a propeller, but subsequently went on and reached its destination without further incident.

The Navy planes, like their British confederates, were obliged to wait at the jumping off place for better weather. While the two were waiting, the "lame duck" of the original trio made its repairs and came hurrying after. The flight to Halifax was made by NC 4, the wounded one, in remarkably fast time for such a heavy type. The run was made at a speed of ninety-eight miles an hour. But further bad luck was lying in wait for the laggard. She was obliged to turn back to Halifax again when she had gone 20 miles on her way.

The attempt of the Navy fliers to cross the ocean is being made with the full coöperation of the seagoing branch of the service. Cruisers and destroyers and battleships are stationed at intervals along the course which the planes follow, ready to respond to any wireless call that they may receive from any of the trio that gets into trouble.

While the planes were waiting for fair winds and an encouraging barometer, a still more tortoiselike contestant for air honors set out from Montauk Point to go to Newfoundland direct. It was the "blimp" or dirigible balloon C-5, also belonging to the United States Navy. The C-5 made the flight to St. Johns, Newfoundland, without a stop, in twenty-five hours and forty minutes, and intended to attempt a voyage from Newfoundland direct to Ireland, instead of by way of the Azores, as is the plan for the Navy planes. But while it was anchored at St. Johns overnight heavy winds tore the C-5 from its moorings and blew it out to sea. A British steamer found it derelict some hours later eighty miles east.

**Victory for the Loan** The fifth and last Liberty Loan went over the mark with a rush—just as the first four had done—in the last hours of the campaign. The subscriptions came in so fast that it will be a fortnight before the final official figures are ready. But there seems to be no doubt that the whole amount subscribed for will be nearer six billion dollars than four and a half billion, the amount asked for. It is estimated that fifteen million persons have bought the Victory Loan notes. This is a smaller number than subscribed for either the Third or the Fourth loan, which were bought by seventeen and twenty-one million respectively. But it is clear that the present loan was taken by individual subscribers, without material assistance from the banks. This means that the notes will be bought out of the people's savings, which is precisely the way in which Government undertakings are best financed, for the general good as well as for the cultivation of the individual's habits of thrift.

#### A STAR REPORTER OF AMERICAN BASEBALL

Lee Wong followed the game first in Hongkong where his baseball stories made him famous. Now he is writing up baseball in San Francisco—this photograph shows him at his desk turning out the day's copy. During a baseball game he uses a telescope to see the fine points of each play

**The Plight of the Railroads** In the first three months of 1919 the railways of the country under Federal control accumulated a deficit of \$192,000,000. This unfortunate condition arises from the simple fact that the operating expenses of the railroads are increasing more rapidly than the operating revenues. In this first quarter the railroads took in 37 per cent more revenue than the average for the three preceding years; but at the same time they spent for the operation of the roads 81 per cent more than the three year average.

Mr. Walker D. Hines, Director General of Railroads, offers these comments on the figures set forth above. To a large extent, he says, the unfavorable results for these three months are due to the fact that business has fallen off and that expenses could not be correspondingly readjusted. The loss, therefore, largely arises in connection with the period of readjustment thru which the country is going. Industrial enterprises generally, Mr. Hines declares, have suffered embarrassment on account of the fact that business has been curtailed so much more rapidly than expenses could be cut down. The railroad business is probably the most inelastic of all businesses, and shows more unfavorably than any other the embarrassing effects of readjustment.

The Director General declares that every effort is being made to readjust the costs of railroad operation to meet the existing conditions; but he admits that in the railroad business it is much more hopeful to expect improvement in the net result from an increase in revenues than from savings in the cost of operation. But precisely such an improvement in revenue he expects as the year goes on. Such an increase in earnings is particularly to be expected because of the enormous crops that are in prospect. On the subject of an in-

crease of railroad rates to meet the existing deficit, Mr. Hines has this to say:

The present unfavorable results naturally lead to agitation of the question whether there ought to be an increase in rates. My own judgment is that the present conditions are too abnormal to serve as a basis for any general change in the level of rates and that it is preferable to defer action on that subject until there shall have been a fuller opportunity to get a more reliable, and possibly a more normal, measure of the conditions, meanwhile resorting to every practicable economy, studying the situation with the greatest care, and keeping the public fully informed as to developments.

**Mr. Root on the Railroad Problem** The parlous condition of the railroad business as disclosed by the steadily increasing discrepancy, on the wrong side, between receipts and expenditures, has aroused vigorous discussions of the questions

#### LABOR'S MAGNA CHARTA

*What President Wilson thinks of the nine points for the international regulation of labor conditions may be seen from this cablegram:*

The labor program which the Conference of Peace has adopted as a part of the Treaty of Peace constitutes one of the most important achievements of the new day, in which the interests of labor are to be systematically and intelligently safeguarded and promoted. Amidst the multitude of other interests this great step forward is apt to be overlooked, and yet no other single thing that has been done will help more to stabilize conditions of labor throughout the world and ultimately relieve the unhappy conditions which in too many places have prevailed. Personally I regard this as one of the most gratifying achievements of the Conference.

of Government ownership, operation and regulation. A strong demand has arisen for the return of the railroads to private control, but with certain new safeguards which will protect the interests of the stockholders more securely than has been the case in the past. There have been three stages in the relations of the Government and the railroads. In the first the railroads did as they pleased without any Government control. In the second the Government assumed definite control over the rates which the railroads were to charge. In the third the Government fixed not only the rates which the railroads might charge, but the hours of work that they must permit their workers to enjoy and hence to a certain degree the wages that the railroads must pay. After the third stage came the period of Government operation in which, of course, the Government determines everything. The problem now is, What shall be done next?

On this subject Mr. Elihu Root has expressed very definite convictions. In a letter to the president of the National Association of Owners of Railroad Securities, Mr. Root set forth these considerations:

I think you have put your hook into the key log of the jam in which our railroads are piled up without power to move forward, and I think no one else has. We are now about to terminate the abnormal condition of Government operation for war purposes. It is apparent that the people of the country do not wish to enter upon a permanent system of Government operation. The railroads are to be returned to private ownership, and they cannot be permitted to go back to the uncontrolled operation of the earlier period. Surely, also, some provision must be made to prevent the continuance of the steady progress toward bankruptcy which characterized the decade before the Government took possession in 1917.

The destruction of values in the \$17,000,000,000 of securities representing the railroad investment of the country, in which one-half the people of the United States are interested directly or indirectly, is reason enough. The fact that one-quarter of the savings of the 30,000,000 people holding policies in the great life insurance companies is invested thru those companies in railroad securities should be sufficient in itself. That, however, is only a small part of the reason for some arrangement which will maintain the value of those securities.

Railroad securities are a chief basis of credit upon which depends all the business of the country, and if that business be destroyed, the consequences to all American prosperity will be incalculably disastrous. Moreover, our country must go on in our development. We are only beginning; we must not stop, and enterprise cannot go on without the development of transportation, which is impossible if the credit of the transportation companies be destroyed.

If Congress follows your suggestion and fixes a fair rate of return for the railroads of each rate-making district as a whole, and requires the rate-making authorities to fix rates which will presumptively yield that rate of return, and then requires that in case any particular road makes more than the prescribed return, the excess shall be taken by the Government and disposed of equitably, as you propose, to promote the public interest in transportation, there is no reason why railroad credit should not be re-established and railroad development proceed promptly, and with it the development of the business of the country.

This being done, all the rest of these elaborate plans become mere machinery—much of it unnecessary machinery, including doubtless many useful provisions and some necessary provisions which are adequately provided for in your plan also.

### There'll Be Plenty of Wheat

When the Allied nations needed food in order to beat Germany, the United States planned to raise such a crop of wheat as the world had never imagined, much less seen, before. Land was sown to wheat which had never raised a crop of the world's premier cereal. The stars in their courses seem to be fighting for us. The Government report of the condition of the winter wheat crop, just made public, reveals that the crop will run to 900,000,000 bushels, unless some extraordinary catastrophe occurs. This is an increase of one-third over the yield of the banner year of 1914.

The wheat, the report declares, came thru the winter and the trying month of March in almost perfect condition.

An interesting feature of the situation is that about one-quarter of the winter wheat crop will be raised south of Mason and Dixon's line, for winter wheat is now being grown in some southern states where it had never been raised before.

The late, wet spring has delayed the planting of the spring wheat crop until there may possibly be a decrease of acreage as compared with last year, instead of an increase as had been expected. But the delay has not been without its advantages, since the ground is thoroly well prepared and well filled with moisture. In the southern sections of the wheat belt, where seeding has been possible, there is an increase of something like 25 per cent in acreage; but in the northern sections, which are of course the more extensive, the seeding is hardly begun.

Unless all signs fail, the world should not be short of bread during the coming year. It seems probable that the North American continent will produce about 40 per cent of all the wheat raised in the world; and that the United States and Canada will have between 650,000,000 and 700,000,000 bushels to export, which will be more than enough to make up the deficiencies that may result from after the war conditions in the rest of the world.

*"I do not see how the most beautiful and impressive monuments that a loving country can erect to the memory of its sons can touch the heart as these simple scattered graves dug where the boys fell and only marked by a simple wooden cross, the American ensign and the dead soldier's gun and steel helmet." This is the little wire enclosed graveyard near Belleau Wood*

## WHERE AMERICA TURNED THE TIDE

BY HAMILTON HOLT

**S**EICHEPREY, Cantigny, Chateau Thierry, St. Mihiel and the Argonne are the five imperishable French names that must remain forever engraved on the hearts of all true Americans. They mark the successive milestones of the advance of the American troops from the time they took over the first front line trench in the spring of 1918 to the final victory in November that sealed the doom of Germany. Seicheprey was the town where on April 21 the Twenty-sixth (New England National Guard) Division under General Clarence Edwards held the line and repulsed Germany's first onslaught upon our troops. Cantigny is forever memorable as the first village taken by American soldiers in an advance attack. This feat of honor belongs to the First Division of the Regular Army commanded by General Robert Lee Bullard. Chateau Thierry was Germany's Gettysburg. There the Second Division with the famous marines and the Third Division first stopped Germany's great drive for victory. The wiping out of the St. Mihiel salient was the first army maneuver planned and carried out exclusively by the American High Command. It broke all records during the war for ground gained and prisoners captured in one drive. The Argonne forest was the head of the snake which America was pounding while the French and the English to the north were pushing back its body and the Belgians its tail. The capture of the Argonne, as General Pershing has said, made possible the cutting of the enemy's main line of communication and nothing but surrender and the armistice could have saved Germany from destruction then.

Of these five battlefields of imperishable glory I have already described two, Seicheprey and Cantigny, in *The Independent* of August 3 and 10, 1918. But tho the marines had taken Belleau Wood before I left Europe for home,

I was in America when our troops began the advance at Chateau Thierry on July 17 that marked the turn of the tide of war.

Accordingly, no sooner had I arrived again in Paris last January than I betook myself to the familiar G 2 at 10 Rue St. Anne where the section of the American General Staff that had to deal with censorship, the gathering and disseminating of information, preparation of maps, and the like had its offices. I found that the press section had been moved to 37 Rue Bassano, just off the Champs Elysees in the region of the American Embassy and General Pershing's headquarters. Over there I found none of the old familiar faces. My friends of last May had all been scattered to the four corners of France, but Lieutenant Reynolds was most gracious, and General Parker, a young West Pointer who had done valiant work on the field in action and who was the first American to lead our forces into Luxembourg after the armistice, readily arranged for Mrs. Holt and myself to visit Chateau Thierry, St. Mihiel and the Argonne as the guests of the American Expeditionary Force. The Chateau Thierry trip could be made in one day as it was within easy motoring distance of Paris. So on January 30 we took an early breakfast and found ourselves a few minutes thereafter in a familiar coffee-colored Cadillac car with U. S. A. painted in large white letters on the side, and red, white and blue bands on the wind shield. Besides ourselves there were Chester M. Wright, the well known American journalist, and Captain E. T. Miller, who acted as escort.

A light blanket of snow had fallen the day before and by the time we passed beyond the environs of Paris into the open country it was evident that we would not have as realistic a view of the battletorn landscape as if the mantle of white had not covered the

scarred earth. How different was this trip from those I took last spring from Paris to the front. Now there were no sentries at the cross roads to challenge us and read our passports. No longer did we pass the never-ending lines of heavy trucks lumbering to the front laden with ammunition and supplies and coming back empty, their drivers covered from top to toe with the thick white coating of the dust of France. We honked thru the familiar towns and villages, but except for an occasional stray soldier, evidently just demobilized, there was not a uniform to be seen. Occasionally we passed batches of German prisoners leisurely mending the roads. They stared at us with idle curiosity. We spun thru Meaux, La Ferté, Marigny, and the great bare hills and the checkered patches of woodland between and at last arrived at the battle area. The destruction and devastation were nothing compared to those parts of France where the lines had been mostly stationary during the war, but there were shell craters here and there and an occasional great gash in a farm building where a shell had torn thru. The spectacle, however, was thrilling to my wife, who was getting her first sight of war's devastation. We left the main road at Lucy and in a few minutes drew up at the side of a broad field where we left the car. The field ran up into the wooded hill on its further side and there we saw the immortal Belleau Wood, now rechristened by the French "The Wood of the American Marines." Except for the shell holes everywhere and the splintered trees it was a typically New England looking scene with its patches of wooded hills, open cultivated fields, little green valleys and winding streams.

The sight that first attracted our attention was a little square graveyard a few yards to our left surrounded by a wire fence stretched from wooden posts. In this yard, buried shoulder to

shoulder, were four rows of American boys, perhaps a hundred altogether. They must have fallen in the woods beyond and been brought here by their comrades after those furious five days of fighting in June, where the marine corps was almost annihilated, and doubtless would have been completely annihilated save for the reinforcements of the New England boys of the Twenty-sixth Division and the Lumberjacks of Michigan and Minnesota of the Thirty-second Division. We now know that 5199 marines were killed or wounded on this battlefield before they were relieved. At the head of each grave was a little wooden cross with the soldier's name painted on it and above the intersection of the cross a circular tin disc on which was stamped the red, white and blue colors of America. Three sets of weather beaten rusty rifles were stacked down the center of the graveyard and against their stocks rested several faded wreaths of flowers. On some of the bayonets still dangled khaki colored steel helmets, each perforated by bullet holes. I started to read the names on the wooden cross pieces thinking possibly that I might come on some one I knew, but there were two million American boys who came over to France and I soon realized the chance of finding a friend was infinitesimal. I noticed also along the roadsides, by the brink of the little stream and even scattered haphazard here and there thruout the open fields little isolated American graves, and almost always the steel helmet of the boy who lay beneath hung from the top of the cross. In due time the United States proposes to erect fine enclosures about the graves of her sons who have died in France and to put suitable monuments of a permanent character in all of them. This

is as it should be, but I do not see how the most beautiful and impressive monuments that a loving country can erect to the memory of its sons can touch the heart as these simple scattered graves dug wherever the boys fell and only marked by a simple wooden cross, the American ensign and the dead soldier's gun and steel helmet.

We walked up the edge of the hill. Our boys had come over from the other side of the woods and we could see the fox holes where the Germans had furiously dug themselves in to escape the deadly bombardment of our artillery. In one of these holes there was still to be seen a gruesome human skeleton—whether of friend or foe I could not tell.

Altho, as I have said, an inch or two of snow covered the ground and a great deal of the debris of the battle was therefore concealed from our view, we found everywhere the earth strewn

with military equipment and clothing and torn bits of khaki hanging on the brambles and underbrush. Here and there were to be seen dud bombs and boxes of live hand grenades. We were told to be specially careful not to touch any of these with our canes or our feet. Captain Miller, who had been over the top again and again in the Argonne fight and who had miraculously escaped without a scratch, said that it would doubtless be safe to touch most of these bombs but that he had got thru the war alive and he was not going to risk being ingloriously blown to bits at this late date, simply to gratify idle curiosity. He told me that we had whole troops of engineers salvaging the various battlefields, and as we walked along we could hear them on the distant hills blowing up the bombs and munition dumps that could not be carted away. Everywhere we went the wood was intersected with dugouts and numerous trenches. It was a miracle how men could fight in such a tangled jungle.

In the old days Belleau Wood was a hunting preserve. In the center of it was an ancient hexagonal hunting lodge. It had been riddled by our batteries, and when we entered it we picked up a bayonet as a souvenir in the bottom of the fireplace. The scarred walls of the lodge were already covered with the names of soldiers and visitors in accordance with our American custom of disfiguring historic places. I noticed the names of a score of Massachusetts boys pencilled on the wall and among these I read, "for the glory of the world," signed by the name of Samuel Gompers. On leaving this tower we plunged [Continued on page 301]

THE Philippines are in spirit the most democratic country of the Far East. It is for this reason that upon the outbreak of the present war, even before the entry of the United States, the Filipinos were prompt to sympathize with the cause of the Allies, for they instinctively felt that democracy was on the side of the Allies, while autocracy was with the Central Powers. They do not have the blind obedience given to a Mikado which, despite its recognized advantages, is an enduring obstacle to the establishment of democracy in Japan. "The Emperor of Japan," says a distinguished Japanese

writer, G. E. Ueyehara, "is the center of the state as well as the state itself. He is to the Japanese mind the Supreme Being in the Cosmos of Japan, as God is in the Universe to the Pantheistic philosopher. From him everything emanates; in him everything subsists; there is nothing on the soil of Japan existent independent of him. He is the sole owner of the Empire, the author of law, justice, privilege and honor, and the symbol of the unity of the Japanese nation." The same author confesses that "this mental habit of the people is a great obstacle to the healthy development of representative government. The masses of Japan still maintain a reverential attitude toward the Government, and look upon the Government officials as superiors; they still cannot quite realize that the Government is by the people."

Contrast this with the political philosophy the Filipino leaders of the past have endeavored to instil in the minds of the people and the unstinted adherence of the people to the cause of democracy. Apolinario Mabini, the guiding intellect of the Philippine revolution, has driven home to the people the following creed of democracy: "Thou shalt not recognize in the country the authority of any person who has not been elected by thee and by thy countrymen; for authority emanates from God, and as God speaks in the conscience of every man, the person designated and proclaimed by the conscience of a whole people is the only one who can use true authority." The National Constitution adopted by the Filipino representatives at Malolos in 1898 sol-

# DEMOCRACY'S VANGUARD IN THE FAR EAST

BY MAXIMO M. KALAW

ASSISTANT PROFESSOR OF POLITICAL SCIENCE, UNIVERSITY  
OF THE PHILIPPINES

Two Americans and five Filipinos compose the Philippine Cabinet. They are, from left to right, Hon. Galicano Apacible, Secretary of Agriculture and Natural Resources; Hon. Victorino Mapa, Secretary of Justice; Hon. C. E. Yeater, Vice-Governor and Secretary of Public Instruction; Hon. Francis Burton Harrison, Governor-General; Hon. Rafael Palma, Secretary of the Interior; Hon. Alberto Barreto, Secretary of Finance; Hon. Dionisio Jakosalem, Secretary of Commerce and Communications.

emnly declares that "sovereignty resides exclusively in the people." Add to this the schooling in democracy we have had for twenty years under American guidance, and we may realize how far ahead of her Oriental sisters the Philippines are in the establishment and maintenance of democratic institutions.

The present government of the Philippines, with all its inherent faults because it was framed by an alien Congress, has certainly made it possible to send to the front to direct the affairs of the nation men who enjoy undoubted popularity. Altho not elected at large, but simply by their districts and later elevated to their posts by the representative organs of the people, the three foremost leaders of the party in power—Speaker Sergio Osmeña, Senate President Manuel L. Quezon, and Secretary of the Interior Rafael Palma—are recognized by all the Filipinos to be the ablest men in the party. One of the requisites, the most fundamental one, in a democracy is therefore fulfilled: that the leaders of the party in power who enjoy the greatest popular support should be given the direction of governmental affairs.

But there is another factor which will cause democracy in the Philippines to succeed. We have not only a percentage of literacy above that of any country in South America, with the possible exception of the Argentine Republic, but we have also a distribution of property favorable to the growth of democratic institutions. The recent census taken in 1918 tells us that there

are more than one and a half million farms in the Philippines, and that 96 per cent of these farms are in the hands of Filipinos. In other words, there are, of the 10,000,000 Filipinos, over 8,000,000 people living on their own farms, tilling their own soil independent of any landlord. A country with property so evenly divided, with a majority of its people free from the enslaving bondage of absentee landlords and factory owners, has certainly a chance of developing a stable democratic institution.

It is no wonder, therefore, that the Filipino people should have such a fine optimism as regards their country's future. They feel that they have a manifest destiny to fulfil as democracy's vanguard in Asia, and are in-

tent upon carrying out in practise the principles of American governmental institutions. This destiny can be best fulfilled under an independent government, with a sovereignty legally and openly vested in the people of the Philippine Islands. As it is today, with all the autonomy that the Filipinos have, their present situation is a travesty upon democracy. The basis of democracy is the sovereignty of the people; that is, that the people are the foundation of all power from whom everything emanates, and all governmental institutions are simply instrumentalities set up by the people themselves. At present the Philippines is but a mere creature of the United States. All her privileges and autonomy are but concessions from a generous guardian rather than birthrights. Even the American Constitution has been held to be inapplicable to the Philippines, and our Bill of Rights has been granted us thru the kindness of an alien Congress.

If the American people wish to make democracy in the Philippines a success, they must allow the Filipino people to establish an independent Republic and turn over to that republic all the sovereign powers which, by right and by the very principle of democracy itself, belongs to them. In that way, and in that way alone, can the Filipino people make true their claim that they are really democracy's vanguard in the Far East, imbued with the loftiest ideals of American institutions and capable of establishing a government "of the people, for the people, and by the people."

Hardly a building in Verdun is unscathed by shell-fire. The wide stretch to the left shows some of its worst effects. In the central background is the cathedral, and to the right the River Meuse, which runs thru the city. The fortifications in the foreground are part of the defenses so gallantly held by the French thruout the war. Beneath the city of Verdun is a huge subterranean fortress, seventeen meters under solid rock and practically shell-proof. Here the army of defense established itself, but it fought in the open trenches farther front against the German offensives.

# WHY THE SALOON WILL STAY

BY F. GREGORY HARTSWICK

**T**HE saloon has passed. Its hours, while not yet completed, are numbered. With the passing of John Barleycorn passes his house. *Ale atque calx!* What now?

Something new, certainly. The saloon has been a part of our existence for so long that it has come to be an institution, and institutions leave gaps when they die. The particular gap left by the saloon is not a lack of artificial stimulation; the taking away of alcohol is more like the removal of a malignant growth, that leaves the body better for its removal. But the taking away of the places where alcohol was sold takes away from many men their only place of social intercourse with their own kind. It is this gap that must be filled.

The recognition of this necessity has brought about the adoption of many ideas for supplying the social needs of man, particularly in the large cities. The more sparsely settled districts apparently have no need of any formal substitute for the saloon. Reports from many of the already dry states, especially those in the West, would indicate that the problem of substitution has taken care of itself; or rather that there has been no problem of substitution. The saloon properties have been taken over by other forms of business; the former habitués, once accustomed to getting along without their drinks, have gone to the cigar stores or the barber shops or the lobbies of hotels for their reports of the baseball scores and their gossip; and life runs on much as usual. But the city presents another aspect. The population of whole counties in the rural districts are crowded into a few blocks in the centers of industry. Some

place must be provided for the relaxation of this population—places where the men can take their hard won ease, read, smoke, play games—yes, loaf—in short, do what they please. These places were once provided by the saloon; what is to provide them now?

The answers to this question are various, but the variety appears mainly in the methods suggested, the replies being substantially the same in fact. The establishment of community centers, where the people can meet and do what they want to for recreation, is the basic plan.

In the densely populated sections of our cities the community center has long been an established fact; but—and here is the vital point—not a paying business. And as long as it was not a paying business it partook of the nature of organized charity, and as such was regarded by the people it ministered to with a certain amount of natural suspicion. The objects of charity suffer long and are kind; but in a nation whose Government is of the people, by the people, for the people, it is only natural that the primary test of any institution should be the application of the three Lincolnian prepositions. Until they fit accurately the institution is not truly national, that is to say not truly successful. The average American has a pair of large, practical feet, and he prefers to stand on them without the help of artificial supports. As John Collier well said, “. . . the day of personally conducted tours of the people into higher realms, handled and tongue-tied, is at an end. The people prefer to conduct their own tours. This statement applies alike to

culture, politics, or morals. The people are learning that nobody but themselves has charge of their own salvation.”

The community center, then, must pay for itself; it must yield full return on the capital invested in it. Only so can it be successful; only so can it be the stronghold of democracy that it should be. There must be no artificiality of atmosphere about the place; no obvious effort to impress the casual comer that here all men are equal; no sedulous nursing of the air of democracy by watchful overseers.

Is this possible? Obviously it is. The community centers have flourished despite the keen competition of the saloon; remove that competition and the center will soon become not only self-supporting but profitable.

**T**HE plans for the establishment of community centers vary from the large recreation house, with facilities for theatrical performances, community “sings,” games, reading and just plain loafing, to the small club for one class—men, boys, girls, women, or small children—with its operation specialized for the needs of whatever class it ministers to. In the latter field the settlements organized thruout the cities are doing work which will undoubtedly establish their enterprizes on the desirable of-by-for basis ere long. Mr. E. F. Hanaburgh, director of the men’s and boys’ clubs branch of the Lenox Hill Settlement in New York City, stated the case in a nutshell when he said in the course of a tour of his clubs, “Once let capital see that here is a profitable investment and capital will run to take advantage of it. The club is bound to

Courtesy Salvation Army Home Service Bureau

The “brass rail temperance bar” of the Salvation Army is a converted saloon that solves a prohibition problem and is a paying business

take the place of the saloon, and there is no reason why it should not take its place as a business as well as an enterprise for the betterment of conditions."

Such clubs as the Lenox Hill Settlement has organized form a very good solution of the problem. They embody all the features which made the saloon a social center; they have pool and billiard tables, card tables, newspapers and magazines, a soft drink bar and a small restaurant, and plenty of chairs in which it is possible to indulge the desire to do nothing at all, should that desire assert itself. It is to the restaurant, the bar, and the games that the club must look for its income if it is to establish itself firmly as an institution of democracy; any suggestion of dues or membership is bound to produce a certain atmosphere of exclusiveness. Any man must be able to enter at any time in any garb; eat, drink, play, rest, pay, and leave or not, as he pleases. That this is commercially possible is the view not only of the members of the settlement committees but also of many men who now own saloon properties. A number of saloon-owners express their intentions to open places like the clubs soon after prohibition goes into effect.

The Salvation Army has opened several "Temperance Bars," in which are preserved all the features of the saloon (except alcoholic drinks), even to the traditional brass rail. These bars have been a great success with the returning soldiers and sailors of our expeditionary force, and as with the clubs should have no great trouble in conducting a paying business once the competition of the saloon is removed. They serve as refuges from the rigors of the weather as well as from the even worse hardships of the furnished room; their lights are bright and inviting; the wan-

dering male can be sure to find some of the gang there when he has nothing to do of an evening. It is to be hoped that the word "Temperance," with its concomitant smugness, will disappear from their signs, and that the institutions will take their places as bars pure and simple. As such they will fill a shortly-to-be-felt want.

The war has left in its troubled wake certain well-organized, well-grounded services, with plenty of capital to start out with. The War Camp Community Service, with approximately fifteen million dollars in its coffers, can do a lot of good work, and undoubtedly will. The Red Cross and the Y. M. C. A., with their tremendous resources, can easily support the community-center movement till it is firmly fixed on its own feet. These institutions can furnish for the boy and young man things which the saloon never could—athletics, physical training under competent instructors, the fostering of the spirit of sportsmanship that is the first step toward good citizenship. And for the men and women of the community to which they minister they can provide facilities for theatrical performances, professional or amateur, or organized singing. Not enough has been made of the tendency of folks to sing when they get together. In these United States we have few folksongs and dances—possibly because of the lack of a professional peasantry—but we have the Original Cosmic Urge which prompts our people to sing in harmony whenever there are two or three gathered together. Harry Barnhart recognized this urge; and the outcome of his recognition was the Song and Light Nights in Central Park, New York City, some three years ago. They were successful—of course. The people were doing it—it was their own work, their own enthu-

siasm that made the festivals; it showed them the possibilities of community singing, and gave them the same delightful, spine-tickling thrill that comes to the scratch quartet when it successfully negotiates a new "Swipe."

The clubs and the community centers give to the people the two sides of leisure life: the side upon which the sexes are segregated, and the side on which they mingle. There are moments when man wishes to commune with man, and woman with woman, each without the other sex. The small club or coffee-house provides refuge for the male should he desire to remove himself from feminine society, as does the tea-room for the women. The community center provides space and opportunity for amicable mingling on equal grounds. Both phases are necessary, and both are being provided for.

THERE is with us already an institution which has gone so far to serve as a substitute for the saloon, and will go farther when the saloon ceases to be. This is the movie. Even before prohibition became a fact the liquor interests were bitter in their opposition to the motion-picture industry. The movie has been since its development into a national factor, a mighty rival of booze as a means of getting away from the cares that infest the day, and we must look to it for assistance in providing opportunities for the social intercourse that makes for the true democracy.

With the individual club taking care of small groups and the large center accommodating the many, there need be no fear that the natural demand for a forum and a meeting place will not be amply supplied. Add to these organizations the vast entertainment power of the moving picture houses, and the need for self- [Continued on page 300]

The Boys' Club of the Lenox Hill Settlement makes its headquarters in a former saloon where sociability remains, but drinks are soft

# FIVE POEMS

BY WILLARD WATTLES

## The Pilots

O Captain, say, the clouds are black with thunder,  
The ship is tossing at the wind's wild will,  
The foaming white-caps hiss and slip from under,  
The mighty engine's throbbing heart is still,—  
Where are we drifting in this night of error?  
Hysterical pilots wrangle at the wheel;  
Without a rudder, toward the glooming terror,  
The great ship lurches on unbalanced keel

"O thou of little faith, am I not able,"—  
I hear my Captain's answer brave and strong—  
"When every anchor slips her faithless cable,  
To guide the ship that I have kept so long?  
The little pilots at each other railing  
Soon fall asleep and all their strife forget,  
While I who set the fleets of time to sailing  
Have thy great Nation in My guidance yet."

## Love

Love is such a strange thing.  
It comes in homely guise;  
And yet unto a simple man  
It gives both tongue and eyes.

Love is such a strong thing,  
It builds the world anew—  
How few there are who know it.  
How very, very few!

## The Movies

Between the peopled mirrors the vaudeville audience  
Disgorged its human carnival of colors and of scents,  
Complacent mouths smiled emptily or sucked a fresh cigar.  
A gorgeous lady swathed in silks climbed to a throbbing car.  
One after one the drug-stores closed and I was left alone  
Except when haunting women hummed in meaning mono-  
tone.

Then suddenly beside the curb I saw the swinging picks  
Of half a hundred swarthy Greeks and big bow-legged  
Micks,  
Above the ditch the shovels scraped, I heard the chugging  
mauls  
Of fifty men in undershirts and sodden overalls,  
The city's sewers steamed with men who faced the torch-  
lights' glare,  
So stolidly they swung their picks, they seemed to freeze in  
air.

So stolidly they swung their picks, so sullenly they set  
The steel's inquisitive sharp tooth, I see them swinging yet.  
Where all the sewers of all time stretch thru the steaming  
street  
And all the laughter of the years goes by on idle feet;  
But there was one turned wearily within his narrow place—  
I had a brother once: he had my buried brother's face.

## A Song for Israfel

Oh, for the strength to strike one splendid note  
Flaming forever tremendous in Time's throat.  
A song that leaps to lips of eager men,  
Not knowing why, who sing my song again  
And rattle all the rafters above them,  
Remembering how a dead man dared to love them

Oh, for a heart to set the world afire,  
The white youth swooning in his own desire.  
The white maid wandering in windy places  
Where every shadow looms with tiny faces,  
And little hands reach up so soft for clinging,  
While all the time it's my song they are singing.

Oh, for one hour the bounds of sense transcending  
When faith believes, but without comprehending:  
When soul goes out to meet upon the road  
That leads to nowhere, messengers of God;  
When brain discerns that in this body lies  
A something bigger than all mysteries.

Oh, for a friend to walk that road with me.  
The long white pathway to eternity,  
The road that winds around the hill of earth  
With two inns meant for sleeping, death and birth:  
We sleep at sunset but we rise at dawn,  
Beyond the hill the road to God leads on.

Oh, for a song across the meadows flinging  
From those far hills—but what's the use of singing?  
Can my white ashes set the world on fire?  
Beg pardon, friend, I whanged a broken lyre.  
How can there stir in such a rifted lute  
A song to strike the choiring heavens mute?

## The One

When He went out from Jordan  
To walk in Galilee,  
He went with those who loved him.  
The Twelve, and then the Three.

When He was in the Garden  
Before the cup was done,  
He found the Three were sleeping  
And called aside the One.

And when 'twas almost finished.  
Down from the bloody Tree  
He found the One beside him  
And His heart leapt to see

The One, the more than brother.  
Who on his heart had lain,—  
Knew only that he loved Him,  
And felt no more His pain.

# THE NEW BOOKS

## Susan Hale's Letters

JUST as one decides that in the age of telegrams and aero mail, letter writing is a lost art, comes a volume of letters so whimsical and delightful that the theory breaks to bits—such are the letters of Susan Hale. One smiles as soon as the book is opened, the little pen sketches are so comic and unexpected, and the smile continues, for whether Miss Hale is describing a reception in the White House or the trials of a crowded street car she has a knack of seeing the funny side of things. Add to that a wide sympathy, a varied and broad experience, and her own quaint and vivacious way of describing people and events, and one understands why her friends saved her letters as too precious to destroy.

The letters are a kaleidoscope of her experiences, as diverse as they are interesting. She knew the world well, both "the particular world of America, and the larger world about which she so constantly traveled," as Edward E. Hale says in his introduction. And to each experience, whether it was swimming in the Dead Sea or teaching school in Boston, she brought unflinching zest. Her letters from Spain, Egypt and Palestine as well as from the more path-worn countries of Europe give one the "feeling of the place," sometimes by a colloquial expression, by the description of a new flower, or by the "color of the town" as she calls it, but it is sure to be individual. She was well known in the intellectual circles of New York, Boston and Chicago, and the book is full of anecdotes of representative people of the time: a meeting with Emerson, breakfast with James Russell Lowell in Paris, tea with the Cleverlands at the White House. Perhaps the most delightful of all are her descriptions of Matunuck, her home, if she may be said to have one, where she made friends with the country-folk and kept open house for her many nephews and nieces, for it is in describing the "common daily round" that she reveals her sense of humor:

A car came along and I climbed up on it with difficulty, to find it was jam full and people staring out of the doors and windows—so I had to stand outside amid the jeers of the populace and the severe invitation of the conductor to "step inside." Thus I would gladly have done, but there was no inside to step to, it being a grand complete. When we swept around the corner I nearly fell off; and this became an object of loathing to the men on the platform who didn't want me.

*Letters of Susan Hale*, edited by Caroline P. Allen. Marshall Jones Co.

## The Government of France

AN authoritative volume by President Poincaré on *How France Is Governed* makes a special appeal by reason of its timeliness. Of late, while international problems have been under consideration, the American press has depicted European misunderstanding of our political organization and its workings. But in this connection, the question might be raised, "Are we any better informed concerning the respective governments of our allies?" To such as feel the need of remedying any defects of this nature, the present reference book cannot be too highly recommended. Monsieur Poincaré's style is straightforward and clear, while the chapter headings and a detailed index add materially to the value of the work.

"This is me yesterday going out to catch a car in my black lace and arctics," wrote Susan Hale to Mrs. William G. Weld. The sketch is Miss Hale's own.

Not only are the present day divisions and functions of the French Government defined, but each is prefaced by a study of its historical development. The Commune, Department, State, Constitution, Ministry, Chambers, Judiciary, Public Education, Budget and Military Service are treated in this way.

From the very nature of the book, personal opinions are not interpolated to any great extent, but now and then President Poincaré voices a sentiment well worth quotation. It is the true Frenchman, patriotic to the core, who speaks:

Patriotism does not come into conflict with our duties toward humanity; it is, on the contrary, a necessary condition of those duties. The best way of loving our fellow-men is first of all to love that section of humanity which is nearest to us, which includes us, which we best know. Instead of scattering our affections and wasting our energies, let us try to concentrate them and employ them usefully in that corner of the world in which Nature has planted us.

*How France Is Governed*, by Raymond Poincaré. Robert M. McBride.

## With the Bards

POETRY, unlike the best seller, that is made to be read and forgotten, and the scholarly opus, that is made to be studied and, alas, also forgotten, is made to be read and read and read—to the inner ear and to all the other ears that can be brought within hearing.

The reviewer discovered that the most interesting book of poetry on his shelf, judged by the frequency with which it had come off the shelf and the number of ears it had reached, was also the smallest of the whole year: Ralph Hodgson's *Poems*. A very little book, with no more than twenty-five titles on its few pages, and yet with a singularly charming personality to set it apart—a touch of humor, a trace of satire, a touch of mysticism, a vein of naive and unhampered sentiment, and a freshness in rhythm and diction that is both subtle and childlike. A curious light-footed persistence and rapidity of movement marks the measure; a movement that in its more serious uses is too nervous to be generous, and in lighter moods, too even to be lingering. It is a clear case of the individual cadence about which the verse librarians speak so often, the Mr. Hodgson uses only the simplest rhythms. "The Song of Honour,"

which the reviewer likes best to read aloud, is too long to be quoted here, but this fragment, rich in imaginative content and thoroly characteristic, must go in. It is called "Time, You Old Gipsy Man":

Time, you old gipsy man,  
Will you not stay,  
Put up your caravan  
Just for one day?  
All things I'll give you  
Will you be my guest,  
Bells for your jennet  
Of silver the best,  
Goldsmiths shall beat you  
A great golden ring,  
Peacocks shall bow to you.  
Little boys sing,  
Oh, and sweet girls will  
Festoon you with may.  
Time, you old gipsy,  
Why hasten away?

Last week in Babylon,  
Last night in Rome,  
Morning, and in the brush  
Under Paul's dome;  
Under Paul's dial  
You tighten your rein—  
Only a moment,  
And off once again;  
Off to some city  
Now blind in the womb,  
Off to another  
Ere that's in the tomb.

Time, you old gipsy man,  
Will you not stay,  
Put up your caravan  
Just for one day?

Beside Mr. Hodgson's little blue book stands another that the reviewer has already presented to almost all the small boys and girls of his acquaintance. But perhaps nobody will enjoy it as much as the reviewer did when he heard Walter de la Mare himself—a gracious, twinkling man—read from *Peacock Pie*. To say that a new interpreter of childhood had come to take his place beside Charles Kingsley and William Blake and Robert Louis Stevenson (tho quite unlike any of them) would be putting the truth rather stiffly. The reviewer likes better to say that, with the help of Heath Robinson's sympathetic drawings, the pages of *Peacock Pie* fairly run over with quaint and jolly whimsies about children and childlike grown-ups.

All the love poems that the world has heard could be divided sharply into two groups: those that merely charm, and those that reveal. To the latter belong Emile Verhaeren's last verses, *Afternoon*, and Sara Teasdale's *Love Songs*. In spite of a provokingly pedestrian translation, *Afternoon* speaks tenderly and eloquently of the love of the middle years. Sara Teasdale writes, as always, with flawless candor and melody and with an amazing economy of expression.

Sarojini Naidu's "The Broken Wing," the third of her small volumes, stands alongside of the *Love Songs*. She speaks of love in an alien vernacular, but with the same beauty of revelation.

John Cowper Powys's *Mandranga*, more bookish than these, will be for most readers less significant as a human document than as fantasy. It is mostly sheer music, liquid and melodious in form, and vague, haunting and suggestive in content.

It is a far cry to Orrick Johns's *Asphalt*—a jumble of poetic experiments ranging from slum verse in dialect to that hyper-encopated stuff before which the layman stands with drooping jaw, uncertain wheth-

Part of "The Navy Eternal," Bartimeus's name for the British navy on, under and above water, at anchor in the Firth of Forth

er to call it imagism or idiocy. The best thing in the book, "Second Avenue," is also the most conventional.

The reviewer has an old-fashioned notion that poetry is a failure unless it is negotiable—unless it passes current from poet to reader without too much depreciation. To him Mr. Untermeyer's outstanding virtue is the sense of life and reality that fills most of his poems. There are real people in his pages, and he puts them there with very little intrusion of his own personality save a keen wit that gives many of his observations a satirical cast. In *These Times* there is sound sentiment, trenchant irony, and not too much of the striving after effect that hampers so many of the over-conscious artists of the poetic revival.

It is disappointing, after the spirit and vigor of "War and Laughter," to find James Oppenheim thrusting himself into that class, but *The Book of Self* is inflated and boring. It is a trilogy of interpretations of life, with the same thesis laboriously expounded in all three poems. There is some glowing poetry by the way, but as a whole the thing undeniably sprawls.

*Poems*, by Ralph Hodgson. Macmillan Co. *Peacock Pie*, by Walter de la Mare. H. Holt & Co. *Afternoon*, by Emile Verhaeren. John Lane. *Love Songs*, by Sara Teasdale. Macmillan Co. *Mandragora*, by John Cowper Powys. G. Arnold Shaw. *Asphalt*, by Orrick Johns. Alfred A. Knopf. *These Times*, by Louis Untermeyer. H. Holt & Co. *The Book of Self*, by James Oppenheim. Alfred A. Knopf.

## In Europe's Listening Gallery

COPENHAGEN, and the Court of Denmark, because of its strategic position and the people from all Europe who frequent it, offers a golden opportunity to get in close touch with European affairs. During his ten years in "the listening gallery of Europe," but a few hours from Berlin, Mr. Egan, our former Minister to Denmark, made the most of his opportunities and listened diligently and heard much. Many of the things which he heard he tells in his thoroughly interesting book of memoirs.

Perhaps the most interesting chapters are those that deal with the purchase by the United States of the Danish Antilles, islands most necessary to the defense of this country, and finally brought into our possession just in time to prevent the possibility of Germany's seizing them as an aggressive measure in her war with us. Mr. Egan makes it clear that Germany would have invaded Denmark at the outset of the war if it had seemed expedient to her.

The change of policy which sent the German army into Belgium and northern France instead of into Denmark, was in a measure due to the belief in Germany that the war would be short; and with France helpless, Russia terror-

ized and England torn by political factions, she could control the Danish Belts that lead from the North Sea to the Baltic and treat these waters as German lakes.

The possession of the Danish Antilles was vital to us and their acquisition was the most important achievement of Mr. Egan's term as Minister in Denmark. It is in no small measure due to his diplomacy that the purchase was finally effected after several unsuccessful attempts in the past.

Other interesting chapters tell of German propaganda and its widespread ramifications, especially along the less recognized lines of religious effort. Mr. Egan writes also most keenly of the other northern nations, Norway and Sweden, and their part in general European politics and the European war. Entertaining also are the descriptions of Danish diplomatic circles and the delightfully democratic Danish Court, which with all its democracy, ranks as among the most aristocratic of Europe and to which it is no mean honor to be accredited.

Many books of memoirs are boring and merely gossipy. Mr. Egan has written a book informational, entertaining and eminently readable.

*Ten Years Near the German Frontier*, by Maurice Francis Egan. G. H. Doran & Co.

Dr. Maurice Francis Egan, former U. S. Minister, tells of official life in Denmark in "Ten Years Near the German Frontier"

## The British Navy

WE all know vaguely that "everything in this war would have been very different" if it hadn't been for the British navy, but we do not know exactly why. "Bartimeus" brings the navy out from behind the smoke screen, brings the ships and the men to life. *The Navy Eternal* is, as the sub-title explains, *The Navy-That-Floats, The Navy-That-Flies and The Navy-Under-the-Sea*. Their daily life in the last four years has consisted of large quantities of what we used to consider incredible heroism, plus a romantic gallantry which savors of the days of Good Queen Bess, mingled with the very likable British trait of treating either gallantry or heroism in oneself as something to be ashamed of and danger as either a bore or a joke.

"Bartimeus's" tales are true. They are amply and interestingly backed with names and facts. He has no need to adorn them; the skilful simplicity with which he tells them is far more striking. The day and the morning after the Zeebrugge affair, the part played by "the little wet ships" and the seaplanes and the motor boats, what the British navy think of their American cousins—they are thrilling stories but better than that, they are real.

*The Navy Eternal*, by "Bartimeus." George H. Doran & Co.

## The Doughboy Alphabet

ALL about the American Army from A to Z is the information Sergeant D. G. Rowse gives us in *Doughboy Dope*, with "scenery" by Corporal M. T. Kopsco. These twenty-six word and pen and ink sketches picture life in the army from the enlisted man's point of view with accuracy and humor. Right thru the alphabet they go thru all the blessings, inconveniences and humorous incidents in camp life to

Z is for Zero—the Kaiser's net gains.

And in between we find

F is for First Call, that moment when the cheery notes of the bugle acquaint you of duty to be done and you spring lightly from your bunk, without delay or repining. Sherman undoubtedly stood reveille.

R is for Rookie, who will positively search, if you ask him, for the key to the parade ground, or ten feet of skirmish line.

Now that the men are getting back into "cits" they will appreciate doubly how they appeared to others when they wore khaki.

*Doughboy Dope*, by D. G. Rowse. Frank K. Kane

## Another "Cleek" Story

AS excitingly improbable a detective story as ever baffled and allured the breathless reader—*The Riddle of the Purple Emperor*—has all the thrills of adventure and

murder and hate and love embroidered on the groundwork of a plot as precisely worked out as a problem in mathematics. The book begins with the theft of a purple jewel from the forehead of an Indian god and ends with its discovery in an underground menagerie. Its intermediate vicissitudes make up a detective story worthy of the author of "Cleck, the Man of the Forty Faces" and "Cleck of Scotland Yard."

*The Riddle of the Purple Emperor*, by Thomas W. and Mary E. Henshaw. Doubleday, Page & Co.

## People You Ought to Know

**CERTAIN AMERICAN FACES**, by Charles Lewis Slattery, rector of Grace Church, New York. (E. P. Dutton & Co.) Brief, penetrating, but faithful sketches of Philips Brooks, William James, Samuel Hart, Henry Nash and others of this circle of comradeship.

**PORTRAITS AND BACKGROUNDS**, by the late Evangeline Wilbour Blashfield. (Charles Scribner's Sons.) Four gems of biography: Hrotsvitha, a Benedictine nun, forerunner of modern dramatists; Aphra Benn, the first professional woman of letters in England; Aisse, a Circassian slave in the eighteenth century Parisian court, and Rosalba Carriera, a Venetian miniature painter.

**FRANK DUVEINECK**, by Norbert Heermann. (Houghton Mifflin Co.) A brief, sympathetic biography of the famous painter, tracing critically the development of his work. Contains twenty-one reproductions of his best canvases with explanatory notes.

**THE BOOK OF DANIEL DREW**, by Bouck White. (George H. Doran Co.) An authentic record in diary form of the life of the trader and financier whose whole effort was given to money making, with no thought of those who suffered thru his greed.

**THE PRIVATE PAPERS OF HENRY RYECROFT**, by George Gissing. (Boni & Liveright.) Semi-autobiographical meditations, full of wise philosophy and literary charm. One of the pocket volumes of the Modern Library series.

**GUYNEMER, KNIGHT OF THE AIR**, by Henry Bordeaux. Translated by Louise Morgan Sill. (Yale University Press.) An appreciation of the famous airman by one of the most famous French authors. A fascinating tale and charmingly written.

**THE REMINISCENCES OF LAFADIO HEARN**, by his Japanese wife, Setsuko Koizumi. (Houghton Mifflin Co.) Opens wide the *shoji* and gives a clear and intimate view of that nervous genius, whose delicacy of understanding won the lasting devotion of many. All readers of Hearn will want this frank yet reticent, this quaint and charming personal record.

**ISABEL OF CASTILE AND THE MAKING OF THE SPANISH NATION**, by Irene L. Plunket; **ALFRED THE GREAT**, by Beatrice A. Lees. (G. P. Putnam's Sons.) Two comprehensive and well illustrated additions to the "Heroes of the Nations" series, giving national history and the personal, intimate biographies of the rulers.

## Books for the Scientist

**TNT AND OTHER NITROTOLUENES**, by G. Carleton Smith. (D. Van Nostrand Co.) A useful textbook of coal tar explosives whose manufacture the United States must continue in peace times if it is to retain the ground gained during the war.

**NEUROPSYCHIATRY AND THE WAR**, edited by Mabel Webster Brown and Frankwood E. Williams. (Committee Mental Hygiene.) Abstracts and references to literature in all languages on mental disturbances of the soldiers. For the specialist.

**CALENDAR OF LEADING EXPERIMENTS**, by William S. Franklin and Barry Macnutt. (Franklin, Macnutt & Charles, South Bethlehem, Pa.) A volume of directions for important experiments that will be of value to every teacher of physics, by authors who have the highest reputation for practical and accurate textbooks.

**APPLIED ELECTRICITY**, by Paul Popenoe and Roswell Johnson. (Macmillan Co.) Authoritative and up to date reference textbook on a subject too often discussed and commended or condemned by those who do not know how much they know. The investigations of recent years have revealed.

**INHERITANCE AND RESISTANCE**, by Hans Zinsser, M.D. (Macmillan Co.) A comprehensive work intended for the specialist, but the general reader who is willing to study the subject will find it clearly and accurately presented. Illustrated with detailed charts.

**THE ORGANISM AS A WHOLE. FROM A PHYSIOLOGICAL AND PSYCHOLOGICAL POINT OF VIEW**, by Jacques Loeb, of the Rockefeller Institute of Medical Research. (G. P. Putnam's Sons.) A study of the inter-

# McCutcheon's English Prints and other Dress Cottons

Reg. Trade Mark

**English Prints**, the absolutely novel Dress Cottons introduced this season and imported exclusively by James McCutcheon & Company, have met with such instant approval that the large stocks we had laid in were not adequate to meet the demand.

The delightfully quaint designs so popular with our great grandmothers assured their instant popularity, and their high quality at once won the approval of discriminating buyers of Dress Cottons.

**English Prints** are but one of the novelties to be found in the Dress Goods Department at McCutcheon's.

A large share of the 33d Street Section of our store is devoted exclusively to Linen and Cotton piece goods of the finer grades. For years we have specialized in these fabrics, and particularly those adapted to women's and children's outer garments and men's shirtings and pajama materials.

Our methods of specialization enable us to maintain a pace far in advance of Fashion's trend. From season to season we are able to procure materials and patterns that are exclusive with us, because of our large purchasing capacity and the fact that we keep in close touch with sources of supply in France, Switzerland, Great Britain and Japan.

**James McCutcheon & Company**  
Fifth Avenue, 34th and 33d Sts., N. Y.

*"I was astounded at my new power over men and women. People actually went out of their way to do things for me, they seemed EAGER TO PLEASE ME"*

# The Secret of Making People Like You

**"Getting people to like you is the quick road to success—it's more important than ability," says this man. It surely did wonders for him. How he does it—a simple method which anyone can use instantly.**

**A**LL the office was talking about it, and we were wondering which one of us would be the lucky man.

There was an important job to be filled—as Assistant-to-the-President. According to the general run of salaries in the office, this one would easily pay from \$7,000 to \$10,000 a year.

The main requisite, as we understood it, was striking personality and the ability to meet even the biggest men in their offices, their clubs and their homes on a basis of absolute equality. This the firm considered of even more importance than knowledge of the business.

You know just what happens when news of this sort gets around an office. The boys got to picking the man among themselves. They had the choice all narrowed down to two men—Harrison and myself. That was the way I felt about it, too. Harrison was big enough for the job, and could undoubtedly make a success of it. But, personally, I felt that I had the edge on him in lots of

ways. And I was sure that the firm knew it, too.

Never shall I forget my thrill of pleasure when the president's secretary came into my office with a cheery smile, looked at me meaningly, handed me a bulletin and said: "Mr. Frazer, here is the news about the new Assistant-to-the-President." There seemed to be a new note of added respect in her attitude toward me. I smiled my appreciation as she left my desk.

At last I had come into my own! Never did the sun shine so brightly as on that morning, and never did it seem so good to be alive! These were my thoughts as I gazed out of the window, seeing not the hurrying throngs, but vivid pictures of my new position flashing before me. And then for a further joyous thrill I read the bulletin. It said, "Effective January 1, Mr. Henry J. Peters, of our Cleveland office, will assume the duties of Assistant-to-the-President at the home office."

Peters! Peters!—surely it *couldn't* be Peters! Why, this fellow Peters

was only a branch-office salesman . . . *Personality!* Why, he was only five feet four inches high, and had no more personality than

a mouse. Stack him up against a big man and he'd look and act like an office boy. I knew Peters well and there was nothing to him, nothing at all.

January the first came and Peters assumed his new duties. All the boys were openly hostile to him. Naturally, I felt very keenly about it, and didn't exactly go out of my way to make things pleasant for him—not exactly!

But our open opposition didn't seem to bother Peters. He went right on with his work and began to make good. Soon I noticed that, despite my feeling against him, I was secretly beginning to admire him. He was winning over the other boys, too. It wasn't long before we all buried our little hatchets and palled up with Peters.

The funny thing about it was the big hit he made with the people we did business with. I never saw anything like it. They would come in and write in and telephone in to the firm and praise Peters to the skies. They insisted on doing business with him, and gave him orders of a size that made us dizzy to look at. And offers of positions!—why, Peters had almost as many fancy-figure positions offered to him as a dictionary has words.

What I could not get into my mind was how a little, unassuming, ordinary-to-look-at chap like Peters could make such an impression with everyone—especially with influential men. He seemed to have an uncanny influence over people. The masterly Peters of today was an altogether different man from the commonplace Peters I had first met years ago. I could not figure it out, nor could the other boys.

One day at luncheon I came right out and asked Peters how he did it. I half expected him to evade. But he didn't. He let me in on the secret. He said he was not afraid to do it because there was always plenty of room at the top.

What Peters told me acted on my mind in exactly the same way as when you stand on a hill and look through binocular glasses at objects in the far distance. Many things I could not see before suddenly leaped into my mind with startling clearness. A new sense of power surged through me. And I felt the urge to put it into action.

Within a month I was getting remarkable results. I had suddenly become popular. Business men of importance who had formerly given me only a passing nod of acquaintance, suddenly showed a desire for my friendship. I was invited into the most select social circles. People—even strangers—actually went out of their way to do things for me. At first I was astounded at my new power over men and women. Not only could I get them to do what I wanted them to do, but they actually anticipated my wishes and seemed eager to please me. But let me tell you some of my experiences.

One of our biggest customers had a grievance against the firm. He held off payment of a big bill and switched to one of our competitors. I was sent to see him. He met me like a cornered tiger. A few words and I calmed him. Inside of fifteen minutes he was showering me with apologies. He gave me a check in full payment, another big order, and promised to continue giving us all his business.

For certain reasons it became necessary for the firm to obtain a signed letter from a prominent public man. Three of our men had tried, and failed. Then I was given

the job. I felt I had been made the "goat." But I got the signed letter, and with it an inside tip which enabled us to land a prize order about which our competitors are still guessing and wondering.

Then trouble sprang up at one of our factories. The men talked strike. Things looked ugly. I was sent to straighten it out. On the eve of a general walkout, I pacified the men and headed off the strike. And not only this, but ever since then this factory has led all our other plants in production.

I could tell you dozens of similar instances, but they all tell the same story—the ability to make people like you, believe what you want them to believe, and to do what you want them to do. I take no personal credit for what I have done. All the credit I give to the method Peters told me about. We have told it to lots of our friends, and it has enabled them to do just as remarkable things as Peters and I have done.

Which reminds me: One of my wife's close friends moved to another town where she was a stranger. My wife of course knew of my method. She told it to her friend with the idea that it might be of assistance to her in meeting new people. It helped her so wonderfully that in a very short time she won the close friendship of many of the "best families" in the town. Everyone wonders how she did it. But WE know.

But you want to know what method I used to do all these remarkable things. It is this: You know that everyone doesn't think alike. What one likes another dislikes. What pleases one offends another. And what offends one pleases another. Well, there is your cue. You can make an instant hit with anyone if you say the things they want you to say, and act the way they want you to act. Do this and they will surely like you, and believe in you, and will go miles out of their way to PLEASE YOU.

You can do this easily by knowing certain simple signs. Written on every man, woman and child are signs, as clearly and as distinctly as though they were in letters a foot high, which show you from one quick glance exactly what to say and to do to please them—to get them to

believe what you want them to believe—to think as you think—to do exactly what you want them to do.

Knowing these simple signs is the whole secret of getting what you want out of life—of making friends, of business and social advancement. Every great leader uses this method. That is why he IS a leader. Use it yourself and you will quickly become a leader—nothing can stop you. And you will want to use it for no other reason than to protect yourself against others.

What Peters told me at luncheon that day was this "Get Dr. Blackford's 'Reading Character at Sight.'" I did so. This is how I learned to do all the remarkable things I have told you about.

You have heard of Dr. Blackford—the Master Character Analyst. Many concerns will not employ a man without first getting Dr. Blackford to pass on him. Concerns such as Westinghouse Electric and Manufacturing Company, Baker-Vawter Company, Scott Paper Company and many others pay Dr. Blackford large annual fees for advice on dealing with human nature.

So great was the demand for these services that Dr. Blackford could not even begin to fill all the engagements. So Dr. Blackford has explained the method in a simple seven-lesson course entitled "Reading Character at Sight." Even a half hour's reading of this remarkable course will give you an insight into human nature and a power over people which will surprise you.

Such confidence have the publishers in Dr. Blackford's Course, "Reading Character at Sight," that they will gladly send it to you on approval. Send no money. Merely fill in and mail the coupon. The complete course will go to you instantly, on approval, all charges prepaid. Look it over thoroughly. See if it lives up to the claims made for it. If you do not want to keep it, then return it, and the transaction is closed. And if you decide to keep it—as you surely will—then merely remit Five Dollars in full payment.

Remember, you take no risk, you assume no obligation. The entire course goes to you on approval. You've everything to gain—nothing to lose. So mail the coupon NOW, while this remarkable offer remains open.

"People would come in and write in and phone in and praise Peters to the skies . . . he was showered with offers of fancy figure positions."

"In a very short time she won the close friendship of many of the 'best families' in town."

## Even better than money

"A. B. A." Cheques are better than actual money for the traveler for several reasons: They are more convenient to carry—less bulky. They are *safer*, because no one can use them until you have countersigned them. Your countersignature on an "A. B. A." Cheque in the presence of the person accepting the cheque, is the only identification required.

They do not have to be changed into another kind of money when you go from one country into another. They are like dollars in the United States and Canada; like pounds, shillings and pence in the United Kingdom and the British Colonies; like francs in France, lire in Italy, and so on. In other words they are accepted internationally for payment of goods and services—"The safest, handiest travel funds."

Get them at your bank, or write Bankers Trust Company, New York, for booklet and information as to where they may be had in your vicinity.

**"A. B. A." American Bankers Association Cheques**

## THE INDEPENDENT EFFICIENCY SERVICE

offers you

ADVICE, INFORMATION  
AND SUGGESTION ON

Office, Factory and Business  
Building Equipment, Household  
Furnishings and Appliances,  
Garden Work.

*This service is free to our readers*

relations of structures and functions within the mind is called. The argument rests on scientific studies of the senses and other faculties, and on mathematical principles.

**THE HUMAN FACTOR IN NUTRITION**, by E. V. McCollum (Macmillan Co.) Recent experiments have proved that the old chemical recipes are quite inadequate as a guide to diet. For there are at least two unidentified substances necessary to health. This important contribution to food chemistry is largely due to Professor McCollum of Johns Hopkins, who here expounds its practical deductions.

**THIS FASHIONING WORLD**, by Alfred W. McCann (G. H. Doran & Co.) The New York Globe paper food man makes alarming revelations about adulterated and devitalized food and suggests the remedy.

**THE HUMAN SKELETON**, by Herbert Eugene Walter (Macmillan Co.) The assistant professor of anatomy at Brown University has written a text book of interest for general reading as well as study. Exceedingly illustrated.

## Tales of Mystery

**THE MAN FROM THE CLOUDS**, by J. Storer Clouston (G. H. Doran & Co.) Adventures of a man who drops from a lost balloon onto a mysterious island and becomes an effective spy-catcher.

**ORCHARD OF THE SECRET SERVICE**, by Valentine Williams (Robert M. McBride.) English spy story in which nearly every chapter explodes in a surprise that hurls you headlong into the next chapter.

**SENIOR HOUSE**, by Leland Hall (Houghton Mifflin Co.) A mystery story containing a very real and decided thrill, which is vastly enhanced by the complete commonplaceness of much of the setting.

**THE SHIELDING WING**, by Will Levington Comfort (Small, Maynard & Co.) A tale of mystery, war, love and hate, in which an American war correspondent becomes involved in the Young China movement.

## Women and Women's Work

**PREPARING WOMEN FOR CITIZENSHIP**, by Helen Ring Robinson (Macmillan Co.) Whimsical but no less penetrating counsel for everyday citizenship as compared with the election-day-only variety.

**MOBILIZING WOMAN POWER**, by Harriot Stanton Blatch (The Woman's Press.) Dedicated to the heroic women of Great Britain and France; yet with a present value to all interested in the labor situation during demobilization and readjustment.

**OPPORTUNITIES FOR WOMEN IN THE MUNICIPAL CIVIL SERVICE OF THE CITY OF NEW YORK**, (The Intercollegiate Bureau of Occupations.) A thorough, careful study of women in the New York City civil service. May be used as a guide to positions in other cities.

**THE EVE OF ELECTION**, by John B. Howe (Macmillan Co.) Furnishes an excellent background for intelligent voting and is especially attractive and helpful to the newly enfranchised woman voter.

**THE WOMAN CITIZEN**, by Horace A. Holister (D. Appleton & Co.) A study of woman's status in the family, community and nation, and an exposition of present day readjustment problems.

**THE BUSINESS OF THE HOUSEHOLD**, by C. W. Taber (J. B. Lippincott Co.) A detailed study of household finance, of importance to the average reader. Explains the budget and details of business, finance and law.

**FOOD AND THE WAR**, prepared under the direction of the U. S. Food Administration (Houghton Mifflin Co.) Practical, reliable textbook on dietetics that will not lose its value after the war, for we must continue to eat and to eat wisely.

**THE LIBERTY COOK BOOK**, by Bertha Stockbridge (D. Appleton & Co.) Several hundred well tested recipes of all sorts—meats, fish, preserves, cakes, bread, etc.—prepared with a view to economy. There are numerous unusual suggestions for sandwich fillings.

**LIBERTY RECIPES**, by Amelia Doddridge (Stewart & Kidd Co.) More than a hundred war-time recipes giving suggestions for meat, wheat, fat and sugar conservation.

**TEXTBOOK OF HOME NURSING**, by Eveleen Harrison (Macmillan Co.) In its revised second edition takes advantage of the newest practice in nursing, and includes a chapter of recipes for invalid cooking.

**DIETETICS FOR NURSES**, by Fairfax T. Proudfoot (Macmillan Co.) A comprehensive study of food sources, the composition and nutritive value of food, its effect in health and its effect and behavior in disease.

**THE WOMAN QUESTION**, (Boni & Liveright.) A medley of 17 authors; history by Dickinson, Fowler and Ward, anthropology by

Mrs. Parsons, sociology at the sex by Nietzsche, glorification by Maeterlinck, free love by Carpenter, free motherhood by Ellen Key, subjection by Mill, etc.

**FOOD SAVING AND STALKING**, (United States Food Administration.) A simple explanation of comparative food values, of use especially to teachers of elementary schools.

**WOMEN**, (Alfred A. Knopf.) An anonymous book, too frank to have been written by a woman! Unflattering in its estimate of the feminine but pungent in style and penetrating in psychology.

## All Sides of the War

**THE SKY PILOT IN NO MAN'S LAND**, by Ralph Connor (G. H. Doran Co.) The dramatization of an individual's struggle and attainment, of the courage and love, that helped lighten the burden of war. A real story.

**SONGS OF THE SERVICE**, by Will Stokes (F. A. Stokes Co.) Popular rollicking songs and favorite service verse of the army, navy and marine corps.

**AN AMERICAN POILU**, anonymous. (Little, Brown & Co.) Home letters from an American in the French service. The horror and pathos of his experiences are offset by the ability to see the underlying beauty and significance of the war.

**THE DIARY OF A GERMAN SOLDIER**, by Feldweh C. (Alfred A. Knopf.) An apparently authentic and exceedingly frank account of Germany at war, by a German sergeant, who served on the eastern and western fronts.

**ACCORDING TO ORDERS**, by F. Britten Austin (G. H. Doran & Co.) Dramatic tales of German war psychology, whose sincerity and freedom from passion makes them more effective as an indictment of "the Prussian idea" than a bookful of atrocities.

**THE HUMAN TOUCH**, by "Sapper." (George H. Doran Co.) Sketches of the tense, the dramatic, or the humorous side of the war, alive with the vital touch of one who went thru it with open mind—and eyes and heart!

**THE NAVAL RESERVE**, by Frank Hunter Potter (Henry Holt & Co.) Description of the life, training and work of recruits in the Reserve at training stations, colleges, and at sea.

**DEAR FOLKS AT HOME**, (Houghton Mifflin Co.) The wonderful work of the U. S. Marines in France, told—as only marines could tell it!—in their own letters from training camps and from the front.

**ESSAYS AND ADDRESSES IN WAR TIME**, by Viscount Bryce (Macmillan Co.) The author of "The American Commonwealth" discusses Britain's reasons for entering the war, war in general, the principle of nationality and the League of Nations.

**THE TWENTIETH CENTURY CRUSADE**, by Lyman Abbott (Macmillan Co.) Interpretation of the war spirit in the form of letters to a mother who had sent her son to war, in the usual felicitous and sympathetic vein characteristic of the author.

**THE FUTURE BELONGS TO THE PEOPLE**, by Karl Liebknecht (Macmillan Co.) The author has fallen victim to his own rashness, but what he stood for, valiantly tho unwisely, is here set forth in his own speeches during the war.

**THE NEAR EAST FROM WITHIN**, (E. P. Dutton & Co.) "Revelations" of German pre-war intrigue in Turkey and the Balkans. Fairly interesting and probably true, otherwise the author would have made a more thrilling tale.

**ONE YEAR AT THE RUSSIAN COURT** (1904-1905), by Renee Elton Maud (John Lane Co.) Casual, gossipy narrative of a year in Russia. Entertaining tales of well-known people in the court circle and bits of description of Russian customs.

**THE BOOK OF AMERICAN WARS**, by Helen Nicolay (Century Co.) By a colorful chronicle of America's other wars, it makes possible a more intelligent and a deeper comprehension of our country's part in the war today, with which the latter portion of the book deals.

**THREE TIMES AND OUT**, by Nellie L. McClung (Houghton Mifflin Co.) Actual conditions in a German prison camp and the experiences of Private Simmons, who escaped after two unsuccessful attempts at freedom.

**THE UNBROKEN TRADITION**, by Nora Connolly (Boni & Liveright.) Personal narrative depicting the inside of the Irish insurrection of 1916, by the daughter of the Commandant of the Irish Republican Army.

**THE GERMAN MYTH**, by Gustavus Myers (Boni & Liveright.) Personal narrative de-statisitics aimed at Germany's proudest claim to superior "kultur," her progress in industrial legislation and general social welfare.

**ONE HUNDRED PER CENT AMERICAN**, edited by Arnon L. Squires, with a foreword by Theodore Roosevelt (G. H. Doran & Co.)

Addresses before the New York Republican Club in 1918 by well-known Americans—Democratic as well as Republican—and distinguished visitors from other lands.

A LEAGUE OF NATIONS, Nos. 131, 134. (American Association for International Conciliation, 407 West 117th Street, New York City.) Reprints of articles and addresses by some of the foremost advocates of a League of Nations.

THE NEW BOOK OF MARTYRS, by George Duhamel. (G. H. Doran & Co.) What war is, not in a glorious trench raid, but in the hospitals. Distinctly unpleasant reading.

## Stories of Romance

A DAUGHTER OF TWO WORLDS, by Leroy Scott. (Houghton Mifflin Co.) From saloon to high society. Jennie Malone has an adventurous career, enlivened by a crook at every turning. The story has plenty of thrills and some fair instruction in criminal technique.

THE BUCCANEER FARMER, by Harold Bindloss. F. A. Stokes Co.) Romance of an extremely enterprising farmer. His adventures and successes in Havana, and how he found love and happiness.

THE BARGAIN TRUE, by Nalbro Bartley. (Small, Maynard & Co.) The temptation of the man with money, and the man with youth and love, made different by the unconventional behavior of the "older man."

SANDS OF GOLD, by Kathlyn Rhodes. (Duffield & Co.) A story of the Egyptian desert, the sane madness of a young Greek and self-sacrifice which brings happiness from seeming desolation.

THE DUCHESS OF SIONA, by Ernest Goodwin. (Houghton Mifflin Co.) A richly colored tale of the Italian Renaissance wherein a right royal adventurer makes good his boast.

## Live and Learn

THE LAW AS A VOCATION, by Frederick J. Allen, Assistant Director of the Bureau of Vocational Guidance, Harvard University. (Harvard University Press.) A book that answers all a young man's questions concerning the scope and future of the law as a profession.

AMERICAN PRIVATE SCHOOLS, Sargent's Handbook Series. (Porter E. Sargent, Boston.) A critical description of the leading private schools of the country, with helpful comparative charts based on various classifications.

THE SHIPBUILDING INDUSTRY, by Roy W. Kelly and Frederick J. Allen. (Houghton Mifflin Co.) Authoritative, comprehensive and explanatory account of American shipbuilding in detail, valuable to the general reader as well as the shipyard worker. Well illustrated.

DEMOCRACY IN EDUCATION, by Joseph Kinmont Hart. (Century Co.) The history of education and the conclusion that the greater part of its task lies just ahead.

THE EVOLUTION OF A DEMOCRATIC SCHOOL SYSTEM, by Charles Hubbard Judd. (Houghton Mifflin Co.) A discussion of our American school system and how it may be freed from the Prussianizing influences of the grade plan. Takes up the junior high school and its possibilities for wider usefulness.

EDUCATIONAL FILM MAGAZINE, edited by Dolph Eastman. (33 W. Forty-second street, New York City.) A new monthly publication covering the educational value of motion pictures from the standpoint of history, travel, science, art, literature, industry, etc.

## Christianity Past and Present

CHRIST'S LIFE IN PICTURES, by George O. Keith. (Evenson Press, Chicago.) Nearly a hundred sepia reproductions of the famous paintings that portray the life of Christ. With biblical text.

THE RURAL CHURCH SERVING THE COMMUNITY, by Edwin L. Earp. (Abingdon Press.) Specific plans for community service for churches in open country or rural town, by the author of "The Rural Church Movement."

RELIGION AND THE WAR, edited by E. Hershey Smith. (Yale University Press.) Vital and challenging essays on the war and reconstruction by members of the faculty of the Yale University School of Religion.

THE GOSPEL BOOKS: THE NEW TESTAMENT, translated and arranged by Charles Foster Kent. (Charles Scribner's Sons.) A logical and chronological setting forth of those parts of the Bible most often read by the student, with misleading repetition and divisions eliminated.

ANCIENT PEOPLES AT NEW TARKA, by Willard Price. (Missionary Education Movement, 169 Fifth Avenue, New York City.) A survey of the changing industrial conditions in the Orient, South America and Africa due to Western business enterprise and the introduction of self-help ideas by missionaries.

# The Open Book- Summer Vacations in the East

Plan now to get away for a joyous, restful vacation. Take advantage of the return of Peace. You have worked hard, sacrificed and saved. You have earned time off. You need the change. Where will you go?

### Down by the Sea

From the forty beaches of New Jersey to the hundred harbors of Maine—around the shores of Long Island and up the coast of New England—are the most famous seashore resorts in the world. All are planning for you the gayest summer season on record.

### The Call of New England

If the carefree, open life of the camp calls, you may hunt, fish, and canoe in woods and lakes of New Hampshire and Maine. If you are a golf enthusiast, or love magnificent views, you may choose the White and Green Mountains. Infinite variety here.

### It only remains for you to decide—WHERE?

The United States Railroad Administration has issued the following descriptive booklets of the above sections containing authoritative information and list of hotels: "New Jersey Seashore"; "Long Island"; "New England Shores South of Boston"; "New England Shores North and East of Boston"; "New England Lakes and Mountains"; "Adirondacks and Thousand Islands"; "Saratoga Springs, Lake George and Lake Champlain"; "Niagara Falls"; "Michigan Summer Resorts". Ask your local ticket agent to help you plan your trip, or apply to the nearest Consolidated Ticket Office; or write the nearest Travel Bureau, naming the Booklet wanted.

## WHY THE SALOON WILL STAY

(Continued from page 291)

expression and relaxation is well removed. It is the belief of some sociologists that the sort of leisure life we have been leading shows that we are in need of some method of social expression which will give the warming of the blood, the loosening and expanding of the mental powers, without the aid of artificial stimuli such as alcohol. This social expression it is the design of the community center and the club to foster and bring out, at the same time giving the people clearly to understand that it is they themselves who are running the business. The truest form of social expression is unconscious, spontaneous, brought about by environment and conditions, not by carefully planned means to that end. The stimulus provided by organized charitable institutions—charitable *per se*—is as artificial as the stimulus of whisky; and while not, perhaps, so detrimental to the physical being, surely is sapping to the mentality. Most people do not want to be improved; they want to improve, but to do the improving themselves, by their own efforts.

In the settlements, in the Salvation Army, the Y. M. C. A., the War Camp Community Service, the Red Cross; in individual enterprise which realizes the coming change and wishes to take advantage of it; in these we have the organization, the mind to plan, the will to build, and the capital for the building. The advent of national prohibition, coming so closely on the heels of war, gives these forces an opportunity for good that is only beginning to be recognized. The war taught us some stern lessons, but it also taught us others not so stern. Our soldiers and sailors who fought overseas are returning with ideas taken from other soils than their native one.

Many women who took over men's work for the period of the war have had their ideas of society altered by the more independent and self-reliant life they have led, and have no inclination to return to former standards. Moreover, our national psychology has undergone a change. People who formerly took no interest in outside affairs now follow with the keenest application the great movements of the world as it readjusts itself after its terrible experience. We have lost to a great degree since April 6, 1917, our once characteristic "Let George do it" attitude toward things here at home. There has been a meeting of the minds of great and small, rich and poor, on a common basis and with a com-

mon purpose—the greatest nationalizing purpose that can come to a country. With its accomplishment there has come a better understanding between different sections of the people regarding mutual problems, a more charitable observation of the other person's viewpoint.

That visionary plannings and wild reachings for an impossible Utopia will not bring about this beginning is well recognized by the activities before mentioned. The whole idea of social reconstruction is brought into sharp focus in the single problem of replacing the saloon, and the methods employed to solve this problem form an index of the methods to be employed in the solution of other difficulties that may arise from our new state of national consciousness. Not in any manner of rainbow chasers have the men who have at heart the interests of society gone about their business, but with minds clear, in recognition of the basic fact that capital invested demands a return of 6 per cent. Every scheme for the replacement of the saloon in our large cities has this fundamental truth behind it, be it the great community center project or the small restaurant. One saloon owner said, when asked what he was going to do after prohibition, "I'm going to keep on doing business at the old stand. I guess if these societies can start coffee houses and get away with it, I can, too. People can prohibit drinks, but they can't prohibit thirst. A cup o' coffee's good on cold nights, and cool drinks set a man up during the hot spells. I'm going to have the best little restaurant and coffee house you ever saw, with card tables and dominoes and such things. Will it pay? You bet it'll pay!"

With commonsense business methods applied to the solution of a social problem that problem cannot remain long unsolved. The hard-headed property owner may not recognize the arrival of the opportunity for the recasting of the social system, but he does realize that the time has come for a change, and he proposes to take advantage of that change for his own material good. When to this sense of business chances is added the altruistic viewpoint the combination must be irresistible. The saloon is to be replaced by paying businesses, conducted with the combined best interests of employers, employees and patrons in view.

New York

## YOU CAN'T FOOL THE CAMERA

"THE war camera that the Allies perfected saw colors that man does not see at all," says Douglass Reid in *Popular Mechanics*. "That's how the Allies got the better of German camouflage."

"For instance, a stereoscopic picture shows a suspicious depression close behind the German trenches. Has it a battery hidden in it? The whole field is smooth and green, having looked so innocent that it was not shelled. In reality it contains a battery covered with green canvas. The green paint blends perfectly with the green grass. However, it wouldn't fool a cow, and it doesn't fool the camera when a special, green-filter lens is used, for the plate shows the green grass in its pure color, while it shows the painted canvas impure and distinct. The green paint is a mixture of yellow and blue, and it photographs vastly different from pure green. Immediately the artillerymen are shown the trick, and they drop shells on it, while the Allied truck drivers roll merrily along some road within

their own lines that the Hun battery was planning to shell.

"Once Germans hollowed out a mountain, fitting it for luxurious quarters for 1200 men—electric lights, billiard tables, bathrooms, music rooms—putting a small rock-colored canvas over the little entrance. A French photographer, Collier by name, attached to the 'Blue Devils' at the time, found this camouflage speck by his color filters, suspected something, told the artillery, and the latter bombarded the tiny mark. Finally one shell made a direct hit, plunged on down into the interior and, exploding, fired some stored ammunition and killed every one of the 1200 Huns within.

"The development of stereoscopic and color photography will be applied to everyday uses in infinite variety. What can we now learn of inaccessible deserts and polar regions, what cannot we now discover of the vast depths of the Amazon jungles, the fabled plateaus of Tibet, the untrod heart of the Sahara?"

## WHERE AMERICA TURNED THE TIDE

(Continued from page 285)

into the center of the wood. The destruction was a great deal more complete than I had supposed from my first view at a distance. Almost every tree was splintered and many of them were completely mown down by the shell fire. The trunks had fallen about in every direction so that it was impossible to go straight thru the woods without an ax. Nothing except a tornado or war could accomplish such ruination.

As we came out of the wood again we could see the roofs of the houses on the hill beyond Chateau Thierry a mile or two to the north. Between us and the city all was desolation. Two or three villages intervening were razed to the ground and at the base of one of the hills we saw some workmen erecting wooden barracks which we were told were for the refugees who were driven out of the region in the third German drive and who were now about to come back and prepare their farms for the spring plowing. The love of the French farmer for his acre of land is probably unsurpassed by that of any man in the world.

We then entered our car and in a few minutes found ourselves in Chateau Thierry. The city still bore many marks of its recent bombardment, but as the inhabitants had returned it seemed a normal French city. Chateau Thierry marks Germany's farthest advance toward Paris. It is only within a two hour automobile run from the capital and is bound to be for all time to come a shrine for American pilgrims. It is very important, therefore, that the American or French Government gets possession of Belleau Wood and some of the surrounding battlefields and keeps them as nearly as possible as they were when our boys went thru on those terrible five days last June. Our Government already keeps the battlefield of Gettysburg as it was in '65.

We motored about Chateau Thierry, saw the shell holes and shrapnel nicks in almost all the houses, and then went out to the little town of Vaux—now a complete ruin—which our Ninth and Twenty-third Infantry took on July 1, after a terrific bombardment and a most gallant charge. As we came back we saw several groups of American naval officers and Red Cross nurses walking about the battlefields. They had come out to spend a day on the historic spot, before returning to the United States.

We motored back to Paris along the Marne, that sacred river which has twice stopped the Germans. We followed the old battlefields of 1914 and saw the now almost obliterated scars where the French made their famous tactical attack on the German army and accomplished its rout. In 1914 it was France that saved the day at the Marne. In 1918 it was America.

"A whole lot o' de talk dat goes 'round," said Uncle Eben, "ain' no mo' real help in movin' forward dan de squeal in an axle."  
—*Washington Star*

At every social affair there is usually a man who is said to be "the life of the party." And how I do dislike that man—  
—*E. W. Hoar's Monthly Catcher*

Dentist: You say this tooth has never been worked on before? That's queer, for I find small flakes of gold on my instrument.  
Victim: You have struck my back collar button. I guess.  
—*London Opinion*

A comma often makes a lot of difference in a line, so does the spacing. A poetess wrote: "My soul is a lighthouse-keeper." The printer made it read: "My soul is a light housekeeper."

## The MIRACLE of MILK

### Drinking Your Way To Health

You know in a general way that milk is good for you. But if you knew what a precious life-giving fluid it really is—if you knew the almost miraculous results it produces for those who drink it intelligently, you would be truly amazed. For anemia, indigestion, constipation, any difficulties of the stomach, liver, kidneys, heart or bladder, Bright's disease, rheumatism and many other ills for which physicians have no reliable remedy, the right use of milk almost invariably overcomes the trouble. For instance, feet and hands that are usually cold and clammy, become warm and life-like a few days after beginning this marvelous self-treatment. Bernard Macfadden, the famous physical culturist in collaboration with Dr. Sanford Porter, the milk diet specialist, has written a book of priceless value entitled: "The Milk Diet, How To Use It."

### You May Have It Free

It will be a revelation to you. Send us a three months' subscription for PHYSICAL CULTURE MAGAZINE at the regular price of 30c and we will mail you the book at once. PHYSICAL CULTURE MAGAZINE should be part of your reading every month. Its inspirational articles on Health, Hygiene and Success-Building will be of great value to you in many ways. To more broadly circulate this unique magazine, we will send it to you for 3 months for 30c and include Mr. Macfadden's above mentioned book free. Write TODAY.

## Pebbles

Germany, which set out to "lick" the earth, has ended by licking the dust.—*London Opinion*.

In place of rail splitters in American politics, we now have hair splitters.—*Long Island City Star*.

The Hun always maintained that envy of Germany brought on the war. If he was right, here is one cause of war forever removed.—*Greenville (S. C.) Piedmont*.

"A man dat never thinks of nobody but hisse'f," said Uncle Eben, "can't help git-m' hisse'f on his mind so much dat he jes' naturally gits tired of hisse'f."—*Washington Star*.

"This is going to hurt me more than it does you, son," declared dad as he reached for the strap. "I feared so, pop. That is why I propose arbitration."—*Kansas City Journal*.

Editor—This isn't poetry, my dear man; it's merely an escape of gas.

Would-be Contributor—Ah, I see. Something wrong with the meter.—*Boston Transcript*.

Officer (just back from abroad)—Gladys, why didn't you answer my last letter? Gladys—I never received it! Officer—You never received it? Gladys—No! Anyway there was something in it I didn't like!—*Judge*.

"Sometimes I think poets are impractical. This one says hope springs eternal in the human breast." "He's right enough. That is exemplified by the way men stick to a losing baseball team."—*Louisville Courier-Journal*.

"Didn't you enjoy your dance, then, Jane?" "No, sir, it was my first public 'op, and it'll be my last. I was hinsulted most 'orrible. A sergeant came over to me an' 'e sez, 'Is your program full?' An' I'd only 'ad an ice cream an' a bun."—*London Opinion*.

"Why do you object to the League of Nations?"

"On musical grounds. After singing 'My Country, 'Tis of Thee,' all these years, I don't want the mental effort of changing to 'Our Countries, 'Tis of Those.'"—*Washington Star*.

"From what you tell me, Sam, you have been a busy man all your life." "Yes, sah: yes, sah." "You've done a great deal in your time and day, Sam, I guess." "Yes, sah. Dat is. I's done a good lot in mah day, but it was in de boss's time, sah."—*Yonkers Statesman*.

The piece Mr. Wilson assigned to Miss Columbia on the Peace Conference program was, "Keep the Home Fires Burning," but she is developing an annoying habit of humming out loud, "Where Is My Wandering Boy, Tonight?"—*Philadelphia North American*.

Visitor (at demobilization camp)—Now that the war is over, I suppose you boys will be beating your swords into ploughshares?

Corporal Comeback—Like blazes! What we're going to do is hammer our tin derbies into dinner pails.—*Life*.

Park Orator—An' I tell yer that all them millionaires' money is tainted—all of it!

Unconvinced Person—'Ow d'ye mean, "tainted?"

Park Orator—Well, 'taint yours, an' 'taint mine, is it?—*Passing Show*.

Smith—That boy of mine is incorrigibly vacillating. I keep telling him that he must be like the postage stamp and stick to one thing till he gets there, but it's no use.

Smart—I'm afraid you have overlooked something. It's true that the postage stamp sticks to one thing, but it's got to be licked first.—*Boston Transcript*.

119 WEST 40th STREET NEW YORK

## War, Pestilence and Russia

In your editorial—"War and Pestilence" (February 8)—you made a very determined effort to say something good about war and something bad about the Almighty. There are but two sources whence this epidemic of influenza could come—man and God. The inference from your article is that God sent it and thus you make up a terrible showing against Him.

If you deny this conclusion, you certainly must admit that man caused it. In that event, can you conclude otherwise than that this influenza is the result of conditions produced by this war? So, let us charge up all these sufferings and all the deaths to this war alone and not make any comparisons as to which brought the world the greatest amount of human woe. Is that not fair?

In your editorial of March 1, "What Happened at Archangel," you praise Mr. Wilson for sending an army of troops to the Russian coast when he was fully convinced by "repeated and very searching considerations of the whole situation" that military intervention "would injure Russia rather than help her out of her distress." How can you follow and confide in a character so contradictory? Then, why did he permit these soldiers to penetrate hundreds of miles into Russia's interior? Do you suppose that the Versailles War Council dispatch was sent without Mr. Wilson's knowing it? If he was so sure that Russia needed grain and machinery instead of armies, why did he not send these aids instead of armies?

N. ROSENBERGER

Muscatine, Iowa

We were not saying anything good about war when we called attention to the fact that influenza was ten times as destructive. When our correspondent says that pestilence must be due either to man or to God he disregards the devil, and it is never safe to disregard him. Or if Mr. Rosenberger does not believe in the devil he doubtless believes in microbes, and should put the blame on them. The war was not the cause of the influenza, for there had been world-wide epidemics of it in peace time. In the present epidemic it raged more violently in such countries as India, Tahiti, Australia and the United States than in the countries directly devastated by the war.

As for the Russian expedition it is well known that Mr. Wilson held out for several months against such action against Great Britain, France and Japan, but finally the Supreme War Council decided upon such action in spite of his protest and he had to participate or withdraw from cooperation with the Allies in the war. This would have encouraged Germany and left Russia altogether in the hands of the other three powers.

Before these tight skirts came in we used to send missionaries to China to see that the feet of the little Chinese girls were unbound so they could walk. *Indianapolis News.*

"Prohibition working all right in your village?" "Yes," replied Mr. Chuggins. "The roads are full of broken glass, proving that nobody has any further use for bottles." — *Washington Star.*

Lawyer—Don't you think \$25,000 cash would be punishment enough for his breach of promise?

The Aggrieved—No, indeed; I want him to marry me. — *Boston Transcript.*

## SCHOOLS AND COLLEGES

### METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course was reduced from three years to two years and six months. The cessation of hostilities will not end the need for nurses abroad; they will be needed, in large numbers, for reconstruction work, and for the establishment of schools of nursing in the different countries of Europe for a long time to come. We plan, therefore, to continue the course of two years and six months.

For Information write to MISS AGNES S. WARD, Superintendent

## Bethlehem Bach Festival

June 6—4 p.m. and 8 p.m.

Eight Cantatas

June 7—2 p.m. and 5 p.m.

LYNCHBURG, VIRGINIA

## PACIFIC SCHOOL OF RELIGION

An undenominational union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. All privileges of University of California open to qualified secondary students. Term begins August 18, 1919. Address: President C. S. Nash, Berkeley, Cal.

### CAMPS

#### PINE TREE CAMP FOR GIRLS

On beautiful Moccasin Lake, 2900 feet above sea, in pine forest at foot of Rocky Mountains. Fourteen miles from New York and Philadelphia. Beautiful and restful scenery. Experienced camp leaders. Modern kitchen, dining hall, comfortable dormitories. Hand-crafts, gardening, boat rowing. Entrance fee \$1.00. Miss Blanche D. Price, 404 W. School Lane, Philadelphia, Pa.

#### BOYS' CAMP AT LAKEVILLE CONNECTICUT

Ideal for location. Boating, Rowing, Fishing, Baseball, Tennis, Soccer, etc. Modern Halls. Excellent Table. Experienced Teachers. Perfect Equipment. June 30 to Aug. 31. Boys 12-16. \$15.00 per week. Full particulars.

Harlem Y. M. C. A., 6 West 126th St.

New York

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein,

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

## \$30 a Week Due to Bran

No doubt bran food doubles many men's earning power. Probably a \$30-a-week man owes half of it to bran.

Bran is Nature's laxative. It aids one's health and spirits, vitality and vim.

Some at your table need it—need it every day. Serve it in a whole-wheat dainty—in Pettijohn's. Note how folks like it, note its good effects. Do that one week and you will never go without it.

**Pettijohn's**  
Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hold 25 per cent of bran.

Also Pettijohn's Flour—75 per cent fine patent flour, 25 per cent bran. Use like Graham flour in any recipe. (3055)

## \$388 BUYS THIS "PRESTO-UP" Bolt-Together House

### The Wonder Buildings of the Age GUARANTEED

Purchased after most rigid inspection by some of the largest Steel, Coal and Industrial Corporations in the United States. You are not experimenting. "PRESTO-UP" Bolt-Together Houses are patented, manufactured exclusively by us and sold at money saving prices. Seven different types of walls to choose from. Wind and weather proof. Invisible joints inside and out. Extremely simple to bolt together. Wonderful strength. Better construction than regularly constructed houses. Exceptionally good lumber. Cement coated nails. Fifteen Year Guaranteed Slate Coated Roofing. Well painted, and best of all, neat in appearance and so simple to bolt together that it is a pleasure to do the work.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY **FREDERICK HOOK LAW, PH.D.**  
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. The Story of the Week.

1. Change the indirect discourse in "The German Protests" to direct discourse.
2. Imagine that you are writing a novel based upon the war and its effects. As part of your novel write a letter, apparently from a German school boy, telling of the recent "week of mourning" and of the boy's experiences during that period.
3. Tell orally, with especial regard to clearness, the story of the Sultan Okwawa.
4. Write a short story based upon any thrilling incident in the life of the Sultan Okwawa.
5. Imagine that you are a prosperous farmer attending a convention devoted to the interests of farmers. Give a talk in which you present the present wheat prospects.
6. Prepare a very short and clear exposition of the conquest of Hungary.
7. Draw up a numbered list of the recent acts of the Communist régime in Hungary. Express every member of the list in the form of a complete sentence.
8. Write an especially vivid description of any one incident in the recent Egyptian disorders. Introduce your description by giving sufficient explanatory material, and by indicating both your physical and your mental point of view. Make use of a number of words that make sense appeal.
9. Analyze, by diagram or otherwise, any one of the topic sentences.
10. Point out the topic sentence of every article in "The Story of the Week."
11. Give the syntax of any five subordinate clauses that occur in these topic sentences.

##### II. Five Poems. By Willard Wattles.

1. In the poem called "The Pilots" what is the meaning of the following: "Captain"? "The ship"? "Clouds black with thunder"? "Hysterical pilots"? "Every anchor"? "Fall asleep"?
2. Show how "The Pilots" is like, and how it is unlike, Longfellow's lines beginning "Sail on, O Ship of State!"
3. Interpret the poem called "Love." Show how the poem is related to "The Vision of Sir Launfal" and "The Rime of the Ancient Mariner."
4. Point out the note of sympathy that appears in the poem called "The Movies."
5. Express in clearly-written short sentences the various wishes made in "A Song for Israel."
6. Explain how the poem resembles Edgar Allan Poe's "Israfel" and how it differs from it.
7. Show how the thought of the poem called "The One" is applicable to daily life.

##### III. The New Books.

1. Explain the following expressions: (a) whimsical; (b) quaint; (c) The letters are a kaleidoscope; (d) unfailing zest; (e) colloquial expression; (f) anecdotes; (g) an authoritative volume; (h) a trace of satire; (i) mysticism; (j) naive sentiment; (k) trenchant irony; (l) a trilogy.
2. Read aloud the selection on "Patriotism" in "The Government of France." Give a spirited talk in which you explain exactly what the selection means.
3. Explain the figure of speech on which "Time, You Old Gipsy Man" is based. Explain exactly what the poem means. Why is the poem said to be "rich in imaginative content"?
4. Imagine that you have won a contest that entitles you to select for yourself any three books named in the list of new books. Write a letter giving your selections, and giving the reason for every selection.

##### IV. Where America Turned the Tide. By Hamilton Holt.

1. What spirit characterizes the article?
2. How does the article impress the reader? By what means did the writer produce the impressions made?

##### V. Democracy's Vanguard in the Far East. By Maximo M. Kalaw.

1. What is the point of the article? How does the writer endeavor to establish that point?

##### VI. Why the Saloon Will Stay. By F. Gregory Hartswick.

1. Explain clearly what is meant by "a community center."
2. Prepare an argument for, or against, the proposed community centers.

#### HISTORY, CIVICS AND ECONOMICS

BY **ARTHUR M. WOLFSON, PH.D.**  
PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. The Treaty of Peace—"The German Protests," "A Week of Mourning."

1. Discuss briefly the contents of each of the German notes and the answer which the Allies have made to them.
2. "The European territory thus alienated contains 70 per cent of her iron ore, 33 per cent of her coal and 20 per cent of her potash." Is it wise and proper to take this territory away from Germany?
3. "The two vanquished parties in this war are the German people and the American idea." What is the basis of this statement? Answer the German complaint.

##### II. Revolutionary Europe—"The Communist Regime in Hungary," "The Conquest of Hungary."

1. Is the revolution increasing or waning in Europe? What is your proof?
2. "In general it [the Hungarian Communist Government] was modeled after Russia," etc. Compare the two.
3. Which of the acts of the Hungarian Communists referred to in the news items meet with your approval? With your disapproval?

##### III. The Revised Covenant—"Republican Contribution to the Covenant."

1. Find the sections of the revised draft which show "that the conference has adopted in toto the three suggestions in which the four distinguished Republicans concur."
2. Find the other sections of the Covenant which have been revised according to Republican ideas.

##### IV. Progress of Civilization—"Early Morning."

1. Make the second paragraph of the editorial the basis for a review of the civilization of the eighteenth century under the following heads: (a) The Old Régime in Continental Europe, (b) Beginnings of the Industrial Revolution, (c) Social Conditions in England and on the Continent.
2. Give the historic basis for the following statements: (a) "... Germany and Italy are only a half century old"; (b) "Japan has been one of the powers for only two decades"; (c) "Within the memory of living men Africa was an almost unknown continent."

##### V. Autocracy and Democracy—"The School for Statesmen."

1. Explain these statements: (a) "Democracy succeeds to the degree to which citizens are accustomed to unite in voluntary associations"; (b) "Every despotism . . . sees in voluntary associations a deadly rival to the claims of the state."
2. Had the Russian people had no practise in self government up to the time of the Revolution of 1917?
3. "Party government . . . never existed in Germany until the election of 1919," etc. Does this mean that there were no political parties in Germany previous to this year?

##### VI. The Sessions of Congress—"The Congressional Gap."

1. What are the historical reasons for the existing practise as to the long and short sessions of Congress?

##### VII. The Egyptian Question—"Egyptian Nationalism," "Egyptian Disorders."

1. Review the history of Egypt during the past fifty or seventy-five years. Does this history throw any light on the present situation?
2. Under what circumstances did Great Britain first become interested in Egyptian affairs? Assume full control in Egypt?
3. What position did Egypt occupy during the progress of the war?
4. Is the Nationalist movement in Egypt similar to the Nationalist movement in Ireland? Should the situation in Egypt be treated in the same way as the Irish situation?

##### VIII. The Problem of the Philippines—"Democracy's Vanguard in the Far East."

1. What is the present form of government in the Philippines? Is the author's assertion that the Philippines are "but a mere creature of the United States" justified?
2. What is the principal argument in favor of Philippine independence? Against it?
3. "Even the American constitution has been held inapplicable to the Philippines." Under what circumstances was this done?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## REMARKABLE REMARKS

**SAMUEL GOMPERS**—I am not a quitter.

**MINNIE MADDERN FISKE**—I detest cats.

**"FATTY" ARBUCKLE**—Well, it's a hard life.

**LADY DUFF-GORDON**—Spots are sartorial sins.

**MARY PICKFORD**—We're slaves of the public.

**GENERAL LUDENDORFF**—America can go to hell.

**"BUGS" BAER**—Do warts ruin a pickle's beauty?

**PREMIER PADEREWSKI**—I have no political past.

**PRESIDENT WILSON**—International law has been handled too exclusively by lawyers.

**CHAMP CLARK**—A man who cannot defend the Democratic record is a stark idiot.

**JAMES GIBBONS HUNEKER**—God made the dawn, but the devil invented the evening.

**ED. HOWE**—No airship has ever crossed the Atlantic and in my judgment never will.

**WILLIAM ALLEN WHITE**—Lenin has displaced Wilson as director of the Peace Conference.

**JULIA MARLOWE**—We would like to make Shakespeare as popular as the movies are now.

**SPEAKER GILLET**—Congress is fully capable of going ahead intelligently without presidential guidance.

**FOREIGN MINISTER UCHIDA**—The Shantung Peninsula will be handed back to China in full sovereignty.

**ARTIST JOSEPH PENNELL**—It was a disgrace that the posters of the last loan were allowed to be distributed.

**MAX SENNETT**—There are girls apparently perfect in beauty who seem to melt into insignificance in the films.

**ROY K. MOULTON**—After July 1 we will have to stop our naval construction, for how will it be possible to launch battle-ships?

**ADMIRAL SIMS**—If the United States had had enough destroyers when we went into the war, we would not have lost a single ship.

**BISHOP KINSMAN**—I am conscious of an increasing lack of sympathy with the various dominant tendencies of the Protestant Episcopal Church.

**LUKE McLUKE**—A woman can wear white all day and look as fresh as a daisy. But if a man wears white an hour he looks like he had slept in it.

**THE PRESBYTERIAN GENERAL ASSEMBLY**—The General Assembly reiterates its strong and emphatic disapproval of all games and sports on the Sabbath.

**GEORGE M. ADAMS**—If you will engrave upon the tablet of your heart this little word UP and have it lead you, you will never know how to fall.

**HARRID F. WEAVER**—When the President presented a pistol to the head of Britain, when he said to us in effect, "Surrender that naval power on which your existence depends or I will blow out your brains,"

he perpetrated an act the moral infamy of which is quite equal to that of the irruption of the Kaiser's legions into Belgium.

**JOHN ARMSTRONG CHALONER**—The most beautiful thing about the female form divine, i. e., its curves, is wiped out by the silly fashion of the day.

**MRS. WILLIAM G. McADOO**—Let us sacrifice our selves, our money and everything we can give to try to live up to the standard our nurses and our boys have set for us.

**ANNE RITTENHOUSE**—If clothes become more scanty and feathers more plentiful on the figure of the modern woman, she will run a neck and neck race with the ostrich.

**WILBUR L. CASWELL**—Listeners to the reading of the Song of Deborah are usually impressed with the resemblance between the story and the instructions of the German general staff.

## THE NEW PLAYS

*She's Good Fellow.* A musical comedy far better than the title would suggest. Clean, very tuneful, with excellent comedy acting, and all surcharged with an overflowing exuberance of "pep" and "zing." (Globe Theater.)

The Theater Guild brings its first season to a triumphant close with its highly successful presentation of *John Ferguson*, a grimly realistic Irish tragedy by St. John G. Ervine. (Garrick Theater.)

## P E B B L E S

**Boarding House Keeper**—I am sorry to say the tea is quite exhausted.

**Boarder**—I am not surprised. It has been very weak for ages.—*London Mail.*

"There's a friend in the outer office waiting for you, sir."

"Here, James, take this \$10 and keep it till I come back."—*Boston Transcript.*

**Judge (to witness)**—Why didn't you go to the help of the defendant in the fight?

**Witness**—I didn't know which was going to be the defendant.—*Boston Transcript.*

**Customer**—Where will I find the candlabra?

**New Floorman**—All canned goods are in the grocery department on the fourth floor.—*Judge.*

**His Daughter (with feminine finality)**—Well, anyway, Daddy, my mind's made up.

**Her Father**—Good heavens! Dorothy, is that artificial, too?—*Blighly.*

**Typhist**—Is there anything more exasperating than to have a wife who can cook but won't do it?

**Dyspeptic**—Yes, to have one that can't cook and will do it.—*Boston Transcript.*

"Do you get any letters about the League of Nations?"

"Letters!" exclaimed Senator Sorghum. "I'm keeping the post office busier than the village queen on St. Valentine's Day."—*Washington Star.*

"What we want is constructive criticism," said the man with an eye to the main chance.

"What's your idea of constructive criticism?"

"Expert advice gratis."—*Washington Star.*

"In my opinion the patriotism that swept the country is bred in the warp and the woof of the bone of every true American."—Former Secretary of the Treasury McAdoo.

Now you know why bones knit. *New York Tribune.*

**Binks**—Say, old man, do you know of any cure for insomnia?

**Jinks**—Counting one thousand is said to be a remedy.

**Binks**—Confound it, that's what everybody tells me; but the baby's too young to count.—*Pit Bits.*

# ***Bolshevism and the Soviets***

Read

## **“STRUGGLING RUSSIA”**

*A New Weekly Magazine Devoted to Russian Problems*

You have heard quite often that Bolshevism and Sovietism are not one and the same thing, and that the Soviets are old, democratic Russian institutions like the Mir and Zemstvo.

Read “Struggling Russia” and you will understand, first, that the Soviets are new institutions having nothing in common with the Mir and Zemstvo, and, second, as the article quoted below puts it, that “the Soviets have degenerated into narrow, bureaucratic class organizations, brazenly trampling upon all the rights of civil freedom.”

### **Soviets Are Not Democratic Institutions**

M. K. Eroshkin, Chairman of the Perm Committee of the Party of Socialists-Revolutionists and former member of the Provisional Government of the Ural, who came to this country with Catherine Breshkovsky, says:

“THE SOVIETS are not democratic institutions, but merely the dictatorship of the Bolsheviks.”

“According to the Soviet Constitution, Russia is governed by Soviets of Deputies, elected by the secret, direct and equal vote of all the working masses. In fact, there never was either a secret election in Soviet Russia, or one based on equal suffrage. Elections are usually conducted at a given factory or foundry at open meetings, by the raising of hands, and always under the knowing eye of the chairman. The majority of the workers very frequently do not take any part in these elections at all. The rights of a minority are never recognized, as proportional representation has been rejected.

The Bolsheviks have excluded from the Soviets all their political opponents. They ‘cleansed’ the Soviets in Perm and Ekaterinburg in January, 1918; in Ufa, Saratov, Samara, Kazan and Yaroslavl in December, 1917; in Moscow and Petrograd in February, 1918. They were excluding all Socialists-Revolutionists and the Mensheviks, to say nothing of the People’s Socialists and members of the Labor Group. So, practically, there remained only Bolsheviks in the Soviets. And as there was no difference of opinion among them, regular meetings were soon abandoned altogether, and the ostensible ‘rule of the working masses’ thus definitely disappeared. A few persons, often appointed from above (the Bolsheviks often had recourse to bayonets to support the fiction of Soviet Rule: in Tumen the Executive Committee of a non-existent Soviet was brought from Ekaterinburg under a convoy of 800 Red Guards) would rule and lord it over the people, tired and weary of the war and a sterile social revolution.”

(“Struggling Russia,” April 5, 1919.)

The first ten issues of the magazine contain articles by Catherine Breshkovsky, Nicholas Tchaikovsky, Alexander Kerensky, Leonid Andreiev, Paul Miliukov, Vladimir Bourtzhev, C. M. Oberoucheff, Emanuel Aronsberg, M. K. Eroshkin, Vladimir Zenzinov, A. J. Sack and others.

### **Mir, Zemstvo and Soviet**

Comparing the Soviets with the old Russian institutions --Mir and Zemstvo--M. K. Eroshkin says:

“Politically, the ‘Mir’ was a popular assembly of the holders of land lots in a village. The Zemstvos, after the March Revolution of 1917, were organs of the popular will, elected on the basis of universal, direct, equal, secret and proportional suffrage. The Soviets, according to the Soviet constitution, are class organizations, a dictatorship of the proletariat, elected by limited, indirect, unequal, open and not proportional suffrage, i. e., elections conducted in full disregard of all democratic and Socialist principles.

The Soviets have degenerated into narrow, bureaucratic class organizations, brazenly trampling upon all the rights of civil freedom. Instead of liberty—license; instead of legality—lawlessness; instead of democracy—tyranny, and instead of social peace—civil war, assault, homicide and rivers of blood.”

(“Struggling Russia,” April 5, 1919.)

### **The Future of Democracy in Russia**

The Soviets will not rule Russia. They will either disappear or remain as class organizations without any governmental functions. Formulating the programme of the Russian democracy struggling against Bolshevism, Catherine Breshkovsky, the “Grandmother of the Russian Revolution,” sets down, among others, the following points:

1. The reestablishment of municipal and rural (Zemstvo) self-government on the basis of the laws passed by the Russian Provisional Government.

2. The declaration as null and void of all the decrees of the Bolsheviks, with the adoption of a policy of gradual transition from conditions under their régime to the newly moulded forms, on the basis of temporary regulations to be ordained either by the future Provisional Government or by the Constituent Assembly.

3. The summoning in the briefest possible time of an All-Russian Constituent Assembly on the basis of the election law promulgated by the Provisional Government.

(“Struggling Russia,” April 12, 1919.)

HARPER'S WEEKLY

## THE INDETERMINATE SENTENCE OF GERMANY

GERMANY has been called before the bar of the assembled nations in session at Paris and has been found guilty of disturbing the peace of the world. She has been fined to cover costs and damages and sentenced to hard labor until these are paid. She appeals against the severity of the sentence and pleads inability to pay the penalty imposed. The court has refused to ameliorate the terms, but, acting in accordance with the best principles of modern criminology, has pronounced an indeterminate sentence. That is to say Germany will be disarmed and confined by a cordon of troops on the Rhine so long as the court may deem necessary; she will be required to pay all she can now and the court will retain supervision over all her affairs for the next thirty years in order to collect such amounts as she is capable of paying in the future. The criminal nation claims to have been converted and to have discarded the disposition that brought her into trouble. The court is skeptical of this forced conversion but is willing to give the prisoner a certain liberty in charge of probation officers in order that she may earn her own living and mitigate the sentence by manifestation of good behavior.

This method has been found by experience to be the fairest and most successful way of securing the three aims of retributive justice—the greatest possible reparation of the crime, the most probable reformation of the criminal, and the utmost security of society. But it should be observed that this method is dependent upon the continued existence of the court, that is to say the League of Nations, with a sanction of force behind it. If this should fail to come into being there would be no possibility of securing anything like adequate compensation from Germany or of preventing her from lapsing into her old ways and becoming again a menace to society. No system of alliances of the old sort can be depended upon to give the necessary security.

It is idle to talk of compelling Germany to make good in full the damage she has done. There is not wealth enough in Germany or the world to pay for the ruin of the last four years, nor tears enough in German eyes to wash the bloodstain from the soil. Germany could not, in her present impoverished state, pay even for all the material and assessable damages to the countries invaded. The Paris conference did the best it could under the circumstances, that is, it estimated the entire indemnity, demanded as much of it down as Germany could possibly pay now and made arrangements for raising the rest in the future. The German delegates assert that the terms imposed are impossible, that the country is incapable of producing the unprecedented sums demanded either in the present or the future. On the other hand the Allies may be making the same mistake as Germany made in 1871 when she imposed the unprecedented penalty of a billion dollars on France, supposing it to be a crushing indemnity that

would keep France in bondage for a generation, but Germany found to her chagrin that the debt was paid within two years and the mortgage cancelled. Nobody can tell on which side the Allied experts have erred, for even the best financier cannot figure on how much the war may have sapped Germany's energy or weakened her manhood or impaired her resources or limited her commerce, or, on the other hand, what new powers may develop under the stimulus of necessity. The only way to find out is to try the treaty plan under the supervision of the League of Nations and see how it works. If it should turn out that the Germans are right in saying that the terms are injurious to the world as well as ruinous to Germany then the world can readily rectify them—provided a world organization exists to make the desired adjustments.

The same argument applies to boundaries as to indemnities. It does not make so much difference as some think just where a line is drawn. They shift like the ripple marks on the seashore. Only a moving picture apparatus could adequately show the map of Europe for the last five centuries. And if the red, blue, green and yellow patches on the map represented peoples instead of sovereignties the fluctuations would be more violent. Populations will never stay put. The only way to secure any approximation to a just apportionment is to provide a means by which the necessary rearrangements can be made from time to time, peaceably, orderly and fairly.

Of course the present treaty does not suit everybody. Nobody imagined that it would. If it suited any one of the powers altogether we might be sure that it was unjust to the others. We can all find flaws in it, but we can be sure that we are not likely to get a better one if this is rejected or if the Paris conference sat as long as the Long Parliament. The treaty as it stands is the result of the conscientious study of numerous and intricate questions by hundreds of experts of various nations for more than a year. It is also the result of discussion, negotiation, intrigue, bargaining, balancing, wire-pulling, conference and compromise by the official representatives of thirty nations and unnumbered individuals and interests. It cannot be amended by any one of the parliaments to which it is presented for ratification. But unlike all previous treaties it contains within itself the mechanism for amendment, namely the Covenant of the League of Nations.

The question then is simply between this treaty with a League of Nations or some other treaty, which probably would be worse, without a League of Nations. The only chance of rectifying any inequities in the present arrangement is to be found in establishing and developing some form of international organization like the proposed League. Therefore those who find the most fault with the draft of the treaty ought to be the most eager for its ratification.

## THE REPUBLICAN CONGRESS AND THE DEMOCRATIC PRESIDENT

THE Sixty-sixth Congress opens with the interesting situation of a government divided against itself. The lawmaking branch is neither Republican nor Democrat but a mixture of both. For the lawmaking power in the government of the United States is not merely the Congress, but the Congress plus the President. It is evident therefore that the Republican majority in Congress can only enact such laws during the next two years as it can induce or force the President to approve. Since the Republicans have only a majority of two in the Senate, there is little possibility that they could muster the two-thirds vote necessary to override a Presidential veto. They must depend upon the force of public opinion to induce the President to approve the bills they pass, or they may pass only such bills as he and they agree upon, or they may pass whatever bills they agree upon among themselves, leave them to the President to veto if he likes, and then go to the country two years from now on the issue raised by his action and theirs.

In other words, the Republicans can either try to work with the President or they can fight him. There are decided indications that they are ready to fight.

There are a number of points on which the two branches of the lawmaking power—the President and the majority in Congress—are already agreed. They are woman suffrage, the return to private ownership of the telegraph and telephone lines, the reduction of taxation, especially the taxes on consumption, and measures to conserve the welfare of the returning soldiers. It is not clear from the resolution adopted by the conference of House Republicans, from which we take the foregoing points, whether the members of the conference agree with the President that the railroads should also be returned to their former owners or not. On other subjects the pronouncements of both the Republican Congressmen and the President are so generally exprest that we cannot be sure how much of agreement there may be between them. But there is quite enough both in the fundamental difference of approach of Republicans and Democrats to questions of public policy and in the present critical temper of the Republican majority in Congress to make it certain that the problem of harmonious coöperation between the White House and the Capitol will not be too easy of solution.

In addition to the subjects already set down, the House Republicans have declared that early attention must be paid to the following:

Railway legislation and development of transportation facilities.  
A military policy and measures necessary for the earliest possible return of our soldiers from overseas.

A comprehensive American merchant marine program.

Public oil and coal land legislation.

Water-power legislation.

Budget legislation.

Tariff legislation, designed to increase the revenues from imports and to afford adequate protection to American labor and industries.

Providing for the revision of the immigration laws and the deportation of undesirable aliens.

Such investigation of administrative activities and expenditures since the beginning of the war as will fully inform the people and serve the public interest.

A close scrutiny of appropriations with a view to reducing the enormous total of public expenditures without injury to any essential activity of the Federal Government.

The Republicans further declare that it is their intention to legislate with a view of aiding in restoring and sustaining normal and prosperous conditions in trade and industry, and among all our people, and legislation to extend our foreign trade and to promote alike the interest of manufacturers, agriculture and labor.

It is greatly to be hoped that some common ground can be found by Mr. Wilson and the Congressional majority

which will prevent the two years of the present Congress from becoming a period of mere controversy and inaction. At both ends of Pennsylvania avenue the thought should be kept constantly in mind that it is not the political fortunes of any individual group or party which should be the chief concern of the nation's elected representatives, but the general welfare.

The nation must not be allowed to fall between two stools.

Appreciation of this fact will not prevent a vigorous presentation by both sides of their convictions and their recommendations. But it ought to keep them, as far as human and political nature will permit, from pig-headed obstinacy or mere obstruction.

Especially should the President be ever mindful of the fact that the new Congress has come more recently from the people than he.

## NO, MR. PRESIDENT

IT is difficult to see the logic or the wisdom of the President's recommendation in regard to wine and beer. The constitutional amendment for national prohibition goes into effect next January. But a rider on the Agricultural bill passed at the last session prohibits the sale of distilled liquor from July 1 of this year, and the manufacture and sale of wine and beer after the same date. Both prohibitions are to last until the end of demobilization. The President now proposes that this provision, in so far as it relates to wine and beer, shall be repealed by Congress.

Mr. Wilson gives as his only reason for the recommendation that demobilization has progressed to such a point that it will be "entirely safe" now to remove the ban on beer and wine. The reasoning is neither clear nor conclusive.

The lifting of the ban would be bad business. The nation has definitely and deliberately determined to abolish the trade in alcoholic drinks. It was no accident, no maneuvering, that brought about the decision. The people want it so; the people will have it so.

Any step in the direction of modifying or relaxing the practical application of this decision would be to prefer a special private interest to the public will.

## REDUCTIO AD ABSURDUM

"If we are going to adopt a League of Nations we ought to pull down our monuments to George Washington, for we are definitely and willfully disregarding his counsels."—Ex-Attorney General Bonaparte.

GEORGE WASHINGTON said that every gentleman ought to have a good saddle horse. We therefore suggest that Senator Lodge and Mr. Bonaparte start a "League to Enforce the Scrapping of Automobile Factories."

## THE PRESERVATIVE REVIEW

WE extend a cordial welcome to the new "weekly journal of political and general discussion." *The Review*, as it modestly calls itself, declines to be classified either as "conservative" or "liberal," but we may fairly call its policy "preservative," since that form is used three times in a single sentence of its opening announcement:

In brief, the object was to establish a weekly journal of general culture, devoted to the preservation of American ideals and American principles of government; a journal that should be animated by a spirit of progress, should welcome and promote needed projects of social improvement, but should insist on the preservation of those fundamentals which must be preserved if the nation is to remain a people of self-reliant freemen.

The names of the editors, Fabian Franklin, of the *Evening Post*, and Harold de Wolf Fuller, of *The Nation*,

are a sufficient guarantee that the new periodical will be safe and sound in politics and finance and of high literary standards.

## THE PASSING OF THE BARON

THE Great War has meant to Europe not only the end of monarchy but the end of hereditary aristocracy, and perhaps the latter event is bigger than the former. After all, the king rarely troubled his royal head about the peasant, or the peasant about the king; except on issues of peace and war and foreign policy generally—very important questions to be sure—even the most active monarchs made their influence but little felt. The details of internal administration had to be left either to the professional politician or to the professional bureaucrat. But the everyday tyrant was the "squire." He, or his bailiff (translated into American, "foreman"), lived right in the village, a visible embodiment of the rule of caste. For him was reserved the best pew in church, the officer's commission in the army, the seat of honor at any public meeting, the exclusive private school and university, the right to attend court, the membership in the aristocratic club, the right to hunt, the right to wear the badges of various orders across his chest, the right to be a local justice of the peace, the right to the honor of the duel, and, above all, the enormous rent roll from the estates once conferred upon some warlike ancestor.

Such was the sugared crust of the layer cake of European society. In the ages of feudalism it extended over every corner of Europe, and the story of its gradual, majestic decay is the substance of modern history. In England, France and western Europe generally the lords and the gentry early lost political power to the kings and their servants, the bureaucrats. In England the Norman knight became the simple "country gentleman"; in France the almost sovereign nobleman became a mere courtier at Versailles. The rise of democracy stripped the aristocrat of his political privileges, leaving him only such fragments of power as his broad acres and social prestige could win him. In Germany, Poland and the Habsburg land somewhat of the old political ascendancy remained down to the present war. The Prussian Junkers signed their death warrant as a class when they risked everything on the chances of a single war. Their victory might have kept hereditary aristocracy alive for two or three generations. Their defeat is final.

For there can be no question that the whole atmosphere of the twentieth century is unfavorable to the growth of aristocracy. Democracy, as we have sometimes had occasion to point out, is always desirable, but it is not always possible. There must be present at least two permissive conditions: a common sense of citizenship and an understanding of self-government. But a really workable aristocracy, as distinguished from the mere afterglow of tradition, is likewise dependent on a favoring environment. The ruling class must be sharply separated from the ruled by the monopoly of some source of power. This power may be purely material and military, resting upon force and coercion; such was the basis of Turkish rule in the Ottoman Empire. It may be economic, resting upon the power of the owner over the man without poverty; such was the rule of the merchant princes of Carthage, Venice and old-time Holland. It may be a monopoly of education, implying not only book learning but superior training, power of organization and *esprit de corps*; such is the rule of colonizing nations in their tropical dependencies. But an aristocracy relying solely on the right of birth and the power of habit without real power to back its pretensions is a house built upon quicksands.

The military power of the Middle Ages was in the hands of the aristocracy because it was difficult to capture a castle without artillery and because a peasant foot soldier

was no match for a man who could afford both horse and armor. The nobility and gentry formed a standing army, every member of which was trained to arms as the essential part of his education. But the invention of explosives and the replacement of the old feudal levy by the modern national army destroyed the monopoly of military power which was one support of the ruling class. The peasant now owned the gun; he still obeyed an aristocratic officer and, so long as he obeyed, all was well. But he might refuse, and then—? We see the answer in the Soldiers' Councils of Germany and Russia.

The economic power of the Middle Ages was likewise the monopoly of a class. The only considerable source of wealth was land, and the man who was not a landowner soon sank to be a serf. The most important event of the French Revolution was not the taking of the Bastille or the execution of King Louis or even the declaration of the Rights of Man; it was the division of the estates of the nobility. Without property a title was but a mockery. Now, everywhere in Europe the great estates are being parcelled out among the small peasants; by confiscation in Russia, by Lloyd-George's taxation in England, by government purchase in Ireland, or simply by the force of competition between the thrifty independent peasant and the shiftless tenant farmer. Industry, it is true, has created a new aristocracy of wealth, but a most unstable one. Land can be entailed from father to son for centuries, thus giving that element of hereditary power and social stability essential to a ruling caste, but wealth won from factory or mine may be scattered in a single generation. Modern radical legislation, moreover, endangers the profits of the captain of industry as much as it does the acres of the baron.

The last source of power, the superior training and education of the aristocrat, has likewise disappeared. Universal education, free libraries, the daily newspaper, the farmers' coöperative society, the labor union, the political association and a voter's share in the work of the state have made the common man as fit for the tasks of government as any special class. The German Social Democrat, with all his faults, is the equal of the Prussian Junker in capacity for organization and discipline and his superior in general culture and comprehension of the problems of statesmanship. Nothing but a most unhappy modesty and self-distrust kept him from thrusting his haughty but inferior "superiors" out of the way long ago. Suppose, even, that the world today desired an aristocracy; whither would it turn? Exceptionally able individuals may certainly be found; it is the business of our democracy to find and employ them. But in what country and in what section of society can we find an organized class able to shoulder alone the task of rule?

## THE SPIRIT INDEED IS WILLING

THE attempted transatlantic flights of American and British airmen have demonstrated several things.

First, that the ocean can be crossed by aeroplane. "NC-4," with its crew of six men, flew steadily, swiftly and safely the 1200 miles from Newfoundland to the Azores thru wind and fog, and made a successful landfall.

Second, that, in the present state of the art, crossing the ocean by aeroplane is uncertain and perilous business. Of three navy planes that set out, one came to utter grief and is set down in the navy records as "lost at sea," while one finished the voyage by water instead of air, and went into the repair shop for three months or so. The little British plane which "hopped off" for the flight straight across to Ireland, with its two intrepid pilots facing the certain alternative of success or death, was never heard of more.

Third, that it is the work of men's hands and not the stuff of which men's hearts are made which is still lacking to turn the great adventure into commonplace accomplishment.

# THE STORY OF THE WEEK

The Peace Treaty presented to the German delegates at Versailles is being published in full in the German newspapers, but the British, French and American press is obliged to content itself with an 8000 word abstract of the 80,000 word document. Senator Johnson has introduced a resolution into the Senate asking for the submission of the entire text to the Senate. It is said that President Wilson favors the immediate publication of the treaty and that the French Foreign Minister, M. Pichon, is willing to disclose the financial and territorial sections, but that Premier Lloyd George insists upon keeping the treaty secret for the present.

One additional clause has been disclosed which provides that

Deposit of ratifications shall be made at Paris as soon as possible. Powers of which the seat of government is outside Europe will be entitled to inform the Government of the French republic thru their diplomatic representatives at Paris that their ratifications have been given, and in that case they must transmit their ratifications as soon as possible.

*Proces verbal* of deposit of ratifications will be drawn up as soon as the treaty has been ratified by Germany and by three of the principal allied and associated powers. From the date of this *proces verbal* the treaty will come into force between the high contracting powers who have ratified it.

According to this as soon as any three of the five principal powers have ratified the treaty peace would be concluded so far as these powers are concerned. That is, they would be free from all the war-time restrictions and could enter at once into commercial relations with Germany and so gain a considerable advantage over other countries that delayed action or refused to ratify.

The Germans have presented ten notes to the Allied and Associated Powers protesting against certain clauses in the treaty or suggesting changes. They have also asked for an extension of time beyond the fortnight allowed on the ground that they had not been able to prepare their reports on the boundary and other questions. The powers accordingly extended the time a week further, to May 29. They thought this desirable not merely because it would deprive the Germans of the excuse that they had been unduly hurried, but also because it may give the German people time to calm down from their present state of indignation and because it will enable Foch to perfect his plans for the invasion of Germany in case she refuses to sign.

The Twelve Islands The news that Italy relinquishes her claim on the Dodecanese is an indication that Italy does not intend to stand immovably on the terms of the famous Pact of London, the agreement made among Great Britain,

Handing in Brooklyn Daily Eagle

THERE'S NO GETTING OUT OF IT

France, Russia and Italy when Italy entered the Great War. Article VIII of the Pact of London states that "Italy shall obtain full possession of all the islands of the Dodecanese at present occupied by her." These islands, then under Turkish rule, were occupied by the Italians when Italy was at war with Turkey over Tripoli, and have been held ever since. When General Ameglio landed at Rhodes in May, 1912, he declared that the islands were "under the temporary occupation of Italy" and would never be returned to Turkey, and he confirmed this promise by the words: "I tell you this both as a general and a Christian and you may consider my words as gospel truth."

Nevertheless Italy did promise in the Treaty of Lausanne to return the islands to Turkey whenever the Turkish officials should be withdrawn from Tripoli, but this promise has not been fulfilled. If the islands had been returned to Turkey they would now have belonged to Greece, who a week after the Treaty of Lausanne was signed captured the other Aegean islands.

According to the principle of self-determination there is no question of the Greek claim. All the Aegean islands as well as the adjacent littoral of Asia Minor have been for more than two thousand years largely Greek in population. Herodotus, the father of history, was born at Halicarnasus on the main-

land near the island of Kos. Hippocrates, the father of medicine, and Praxagoras, who discovered the arteries, were born in Kos. In Patmos John is reputed to have written the Apocalypse. The colossus of Rhodes was one of the wonders of Greek art. In recent times the proportion of Greeks has increased and at the last census there were in the Dodecanese 102,727 Greeks, 11,960 Turks and 4000 Jews. There are practically no Italians except those who have come in since 1912.

But the population of the islands has, according to definite statements from Greek sources, suffered greatly during the years since 1912. Thousands have died from starvation or have taken refuge in the neighboring Greek islands. According to Greek figures, the island of Calymnos, which at the time of the Italian occupation had 25,000 inhabitants, had fallen last December to 8312. Leros has fallen from 8000 to 2500. Symi has fallen from 25,000 to 7000. It is to be hoped that their destitution may be relieved now that the Dodecanese has ceased to be a bone of contention.

But when the English talked about the desirability of Italy's giving the Dodecanese to Greece according to the desires of the people the Italians retorted by suggesting that England give the island of Cyprus to Greece for the same reason. Of the 300,000 people who live in Cyprus 235,000 are Greeks, most of the others being Turks. There are practically no English inhabitants except the garrison. Cyprus was secretly ceded to Great Britain in 1878 by Turkey to secure British support for the Turkish claims at the Congress of Berlin. In 1915 the British Government offered Cyprus to Greece if she would enter the war on the side of the Allies. Premier Venizelos was anxious to accept but King Constantine vetoed him. Now Constantine is out of power and Venizelos in, so Greece is likely to get part at least of her Asiatic claims.

The Ukrainian Question On May 3 we explained the Ukrainian situation and suggested that since the French policy of force had failed, the American policy of cooperation with the Ukrainians might next be tried. This surmise is confirmed by the announcement that President Wilson has answered the telegram appealing for help sent him by the Ukrainian Government on April 18. In his response the President invites the Ukrainian Government to send a delegation to Paris to confer about the territorial claims in dispute between them and the Poles. But this did not put a stop to the fighting that has been going on over Lemberg, for the Poles under General Haller still con-

tinue their attacks on the Ukrainians and are gaining ground in Galicia.

Petliura continues his successful campaign against the Bolsheviki and has recaptured Kiev, the capital of Ukraina. While campaigning in the Pripet region north of Kiev some 20,000 Bolsheviki from the First Soviet Army deserted to the Ukrainian side, either surrendering their arms or joining Petliura's forces. With these reinforcements and munitions his chief of staff, Colonel Melnik, a Ukrainian of experience as an officer in the Austrian army, was able to cut off Kiev from Moscow and so to take it. He is still advancing and may, if he receives the support of the Allies formerly asked in vain, be able to endanger the Bolshevik communications with Odessa, and possibly to make connection with the Siberian troops of Admiral Kolchak that are advancing toward the Volga on the opposite side of the Ukraine.

The French feel much humiliated by their expulsion from Odessa by the despised Bolsheviki, and complain that they are not getting fair treatment from their allies. The Paris *Temps* points out that Great Britain has her foot in the door at Archangel and Baku and Japan and America have access to Siberia, while France has no foothold in all Russia.

To the east General Denikin, in command of the Cossacks, has retaken Rostov-on-the-Don and inflicted a severe defeat on the Bolsheviki further north. Admiral Kolchak, with the Siberian troops, has retaken Samara which gives him command of the Volga River and may enable him to join forces with Denikin.

**Drive on Petrograd** As was demonstrated in the article on "Smothering the Russian Volcano," April 19, the logic of the situation pointed to an attack upon Petrograd as the next step in the Allied campaign against the Bolsheviki. This has now developed as a triple movement from the west, in which the British fleet in the Gulf of Finland is supported on the right or southern shore by the Esthonian army, and on the left or northern shore by the Finnish army. Neither has far to go, for the frontier of Finland is only twenty miles from Petrograd, and on the other hand the Esthonian forces early in April reached the Narova River, which connects Lake Peipus with the gulf, eighty miles from Petrograd. The two military movements are not merely coordinated but practically identical, for the Esthonians are of the same racial stock as the Finns, and 200 Finnish volunteers have enlisted in the Esthonian army. Petrograd is in fact a Russian city established by Peter the Great in the midst of a Finnish population, and it is quite possible unless Russia as a whole is reconstructed that Finland and Esthonia may unite to form one country including Petrograd.

The necessary preliminary for this campaign was the recognition of the independence of Finland, and this action was taken by the British and

American governments on May 5. The French Government had recognized Finnish independence last year. Admiral Kolchak, dictator of Omsk, who claims authority over all Russia, has protested against the action of England and the United States in breaking up Russia and destroying the defenses of its capital without consulting the Russian people, but this protest is not likely to be regarded, for Russia is not officially represented at the Paris Conference.

General Mannerheim has long claimed that the Finnish army could take Petrograd at any time, but the question of what to do with it afterward was the serious deterrent. The population of the city, 2,000,000 before the war, 3,000,000 during the war, but now fallen to 500,000, would have to be fed from outside sources, and Finland itself is on the verge of famine. But now the Allies have agreed to provide food for Petrograd when the Bolsheviki are expelled, so this impediment is removed.

**The Finnish Campaign** An expeditionary force, said to number 50,000, has been concentrated at the Finnish capital, Helsingfors. The French Government has provided instructors to aid in the training of this army. Part of the force, some 4000, is composed of Russian refugees, who are anxious for an opportunity to fight the Soviet Government which has dispossessed them. These are under General Yudenitch, who was commander-in-chief of the Czar's army on the Caucasian front and conducted the brilliant campaign against the Turks in the winter of 1916, resulting in the capture of Erzerum.

At the head of the Finnish Government is now General Mannerheim, who

held command in the Russian army in the early part of the war and later organized the White Guards, which, with the aid of the Germans, drove the Reds out of Finland. His new army developed out of the hastily raised White Guards and equipt by the Allies will take part in the invasion of Russia. The Finns claim a considerable part of the Russian borderland from the Murmansk and Karelian coast down to the Gulf of Finland, which they are now entering.

It was cabled on May 2 that the Finnish forces were already in possession of Petrograd, but this appears to have been an anticipation of events. They have, however, crossed the frontier north of Lake Ladoga and seized the railroad running up to Murmansk, where the Americans are. A British force from Archangel has joined the Finns at Lake Ladoga.

The Esthonian army is under the command of General Rodzianko, a Russian general of distinction. It had been advancing eastward between Lake Peipus and the Gulf of Finland, driving the Reds back upon Petrograd.

South of Esthonia the Letts are making a similar drive and have recaptured Riga. The Bolshevik commissioners who had been governing the city were executed.

The Bolsheviki on May 18 began naval operations in defense of Petrograd. A fleet of torpedo boats, destroyers and cruisers came out of Kronstadt, the naval port of Petrograd, in the morning and had an encounter with the British fleet under Rear Admiral Sir Walter Cowan. After a half hour engagement the Russian vessels were driven back to the shelter of their mine fields and one cruiser is said to have been sunk.

CLOSING IN ON PETROGRAD

In the combined naval and military movement on Petrograd an army of Finns and Russians is coming down the railroad from Viborg and also on the eastern side of Lake Ladoga, the stippled area of the map northeast of Petrograd. An Esthonian army has advanced on the northern side of the Gulf of Finland as far as Riga and the Luga River. The British fleet has defeated the Bolsheviki fleet in the Baltic.

### Making Allies Out of Enemies

A curious feature of the Russian situation is that the men whom the Allies are now backing in their campaign against Russia were a year or two ago on the side of the enemy. General Skoropadski, who has been called into consultation on the Baltic campaign, was made Hetman or Dictator of the Ukraine by the Germans when they suppress the Ukrainian republic. He was received by the Kaiser with great cordiality at Berlin and ruled the Ukraine with the aid of German troops until at the collapse of Germany he was overthrown by Petliura, the Ukrainian peasant leader. General Mannerheim, the head of the Finnish army, also owes his power to the support of Germany, for it was German troops who came to his rescue when he was driven out of Helsingfors by the Reds and who established the present Finnish Government. General Mannerheim welcomed the German army on its landing in Finland with most effusive language and thanked them in the same style at the end of the campaign. It was this introduction of the Germans into Finland that made it necessary for Allied and American troops to go to Archangel. General Pilsudski, who is leading the Polish armies against the Ukrainians, was the organizer and commander of the famous Polish Legion which formed part of the Austrian army in 1914-15. General Krasnov, of the Don Cossacks, whom the British are now aiding with munitions and staff officers, was a year ago welcoming the Germans as Allies and with the aid of German troops recovered his capital, Rostov. Professor Miliukov, who now stands high in Allied councils at Paris, was last year conspiring at Kiev to ask the Germans to occupy Russia. Last and strangest of all, the treaty prepared at Paris prohibits the Germans from withdraw-

ing their troops from Russian territory without the express permission of the Allies. Yet one of Wilson's war aims was the removal of all foreign troops, especially German, from Russia. The reason for these new alignments and alliances is, of course, that the present danger comes not from the Germans but from the Bolsheviks.

### The President's Message

The Sixty-sixth Congress opened in extraordinary session on Monday of last week, and on Tuesday in both Houses was read the message from the President, sent from Paris by cable. There was nothing of startling newness in the message and little that was not to have been expected. The subjects which the President treated were the appropriation bills which failed of passage at the last session, conditions of labor and the relations of labor and capital, employment for returned soldiers, foreign trade and merchant shipping, taxation, woman suffrage, telegraph and telephone lines, railroads, and the prohibition of the manufacture of wines and beer.

Mr. Wilson made but a few specific

recommendations. He urged the adoption of the woman suffrage amendment to the Constitution; the repeal of the legislative provision prohibiting, after July 1 next, the manufacture and sale of wines and beer; the repeal of many of the minor taxes in the revenue legislation of the past two years, including "the excises upon various manufactures and the taxes upon retail sales." On the other subjects the President's treatment was more general and more by way of calling to the attention of Congress certain matters than of suggesting the action which should be taken upon them.

He declared that "we must see to it that our returning soldiers are assisted in every practicable way to find the places for which they are fitted in the daily work of the country." He pointed out two methods of accomplishing this desirable result: one by developing and maintaining upon an adequate scale the organization created by the Department of Labor for placing men seeking work; the other thru the plans proposed by the Secretary of the Interior by which returning soldiers may be helped to take up land in the hitherto undeveloped parts of the country, which the Federal Government has already prepared or can easily prepare for cultivation, and also in many of the neglected areas which lie within the limits of the older states.

On the subject of trade and shipping the President suggested that our new merchant ships "which have in some quarters been feared as destructive rivals, may prove helpful rivals, rather, and common servants, very much needed and very welcome"; that our great shipyards may prove to be immensely serviceable to every maritime people in replacing rapidly the tonnage wantonly destroyed in the war, and that "there are many points at which we can facilitate American enterprise in foreign

Barbed wire entanglements and tanks were brought into play to keep order in Limerick during the general strike. British soldiers are shown here patrolling the city streets

trade by opportune legislation and make it easy for American merchants to go where they will be welcomed as friends rather than as dreaded antagonists." America, Mr. Wilson declared in connection with this last point, "has a great and honorable service to perform in bringing the commercial and industrial undertakings of the world back to their old scope and swing again, and putting a solid structure of credit under them. All our legislation should be friendly to such plans and purposes."

The President declared that the telegraph and telephone lines would be returned to their owners as soon as the retransfer can be effected without administrative confusion, and that the railroads will be handed back at the end of the calendar year. In relation to all three of these public utilities he expressed the conviction that "it is clearly desirable in the public interest that some legislation should be considered which may tend to make of these indispensable instrumentalities of our modern life a uniform and coordinated system which will afford those who use them as complete and certain means of communication with all parts of the country as has so long been afforded by the postal system of the Government and at rates as uniform and intelligible."

**The President on Taxation** Mr. Wilson recognized the fact that the financial obligations which the nation had assumed during the war were great, but he explained that they were not so great as they seemed, since a large proportion of the sums raised by bond issues were loaned to other governments and their repayment, therefore, would not have to be assumed by American taxpayers. He expressed his conviction that the sum total of the nation's war obligations was not so great as to make it difficult for the nation to meet them, "and meet them perhaps in a single generation, by taxes which will neither crush nor discourage." In order to accomplish this end,

the President had these suggestions to make:

The main thing we shall have to care for is that our taxation shall rest as lightly as possible on the productive resources of the country, that its rates shall be stable, and that it shall be constant in its revenue yielding power. We have found the main sources from which it must be drawn. I take it for granted that its mainstays will henceforth be the income tax, the excess profits tax, and the estate tax. All these can so be adjusted to yield constant and adequate returns, and yet not constitute a too grievous burden on the taxpayers.

A revision of the income tax has already been provided for by the act of 1918, but I think you will find that further changes can be made to advantage both in the rates of the tax and in the method of collection. The excess profits tax need not long be maintained at the rates which were necessary while the enormous expenses of the war had to be borne; but it should be made the basis of a permanent system which will reach undue profits without discouraging the enterprise and activity of our business men. The tax on inheritances ought, no doubt, to be reconsidered in its relation to the fiscal systems of the several states, but it certainly ought to remain a permanent part of the fiscal system of the Federal Government also.

Mr. Wilson declared further that it is expedient to maintain a considerable range of indirect taxes as well. Since alcoholic liquors will presently no longer afford a source of revenue by taxation he believes that the field should be carefully restudied "in order that equivalent sources of revenue may be found which it will be legitimate and not burdensome to draw upon."

In relation to the tariff the President said there is, "fortunately," no occasion for undertaking in the immediate future any general revision. No serious danger of foreign competition, in his judgment, now threatens American industries, since the European countries which are our competitors in manufacture will be fully occupied for years to come in the work of mere reconstruction.

He does find, however, need for prompt attention to two parts of our tariff system. We must consider the question of the protection and encour-

agement of the manufacture of dye-stuffs and related chemicals.

Our complete dependence upon German supplies before the war made the interruption of trade a cause of exceptional economic disturbance. The close relation between the manufacture of dyestuffs on the one hand and of explosives and poisonous gases on the other, moreover, has given the industry an exceptional significance and value. Altho the United States will gladly and unhesitatingly join in the program of international disarmament, it will, nevertheless, be a policy of obvious prudence to make certain of the successful maintenance of many strong and well equipped chemical plants. German chemical industry, with which we will be brought into competition, was and may well be again a thoroly knit monopoly, capable of exercising a competition of a peculiarly insidious and dangerous kind.

The other point of tariff legislation to which he directs attention is that of properly protecting ourselves whenever our trade is discriminated against by foreign nations. "Our tariff laws as they now stand provide no weapon of retaliation in case other governments should enact legislation unequal in its bearing on our products as compared with the products of other countries. Tho we are as far as possible from desiring to enter upon any course of retaliation, we must frankly face the fact that hostile legislation by other nations is not beyond the range of possibility and that it may have to be met by counter legislation."

This last recommendation relates to the "anti-dumping" legislation recom-

## A PLUCKY LOSER

Captain "Billy" Morgan, pilot of the tiny Martinsyde plane in which he and Captain F. P. Rayburn planned to fly from Newfoundland to England, took the chance, even greater than Hawker's in the Sopwith plane, with full realization of how heavy were the odds against him. The Martinsyde had no life boat or life saving apparatus, only luck could have brought the airmen safely overboard. And luck was against them from the start. Adverse winds hindered the take-off until an axle of the undercarriage buckled, smashing the plane and severely injuring both the men. Captain Morgan was wounded flying on the western front and lost his right leg, but he learned to fly again in spite of the artificial limb. This latest accident off Newfoundland will probably prevent him ever flying again.

needed by the Tariff Commission, and as the President recalls to mind, "suggested by previous administrations."

The President The most significant portion of the President's message is that on Labor concerned with labor and its relations with capital, since that is the most pressing of the problems which confront not only this country but all the countries of the world in the new age which is to follow the Great War. On this point we must quote the President at length:

The question which stands at the front of all others in every country amidst the present great awakening is the question of labor, and perhaps I can speak of it with as great advantage while engrossed in the consideration of interests which affect all countries alike as I could at home and amidst the interests which naturally most affect my thought, because they are the interests of our own people.

By the questions of labor I do not mean the question of efficient industrial production, the question of how labor is to be obtained and made effective in the great process of sustaining populations and winning success amidst commercial and industrial rivalries. I mean that much greater and more vital question, how are the men and women who do the daily labor of the world to obtain progressive improvement in the conditions of their labor, to be made happier, and to be served better by the communities and the industries which their labor sustains and advances? How are they to be given their right advantage as citizens and human beings?

We cannot go any further in our present direction. We have already gone too far. We cannot live our right life as a nation or achieve our proper success as an

industrial community if capital and labor are to continue to be antagonistic instead of being partners. If they are to continue to distrust one another and contrive how they can get the better of one another, or what perhaps amounts to the same thing, calculate by what form and degree of coercion they can manage to extort on the one hand work enough to make enterprise profitable, on the other justice and fair treatment enough to make life tolerable. That bad road has turned out a blind alley. It is no therefore to real prosperity. We must find another, leading in another direction and to a very different destination. It must lead not merely to accommodation but also to a genuine cooperation and partnership based upon a real community of interest and participation in control.

There is now, in fact, a real community of interest between capital and labor, but it has never been made evident in action. It can be made operative and manifest only in a new organization of industry. The genius of our business men and the sound practical sense of our workers can certainly work such a partnership out when once they realize exactly what it is that they seek and sincerely adopt a common purpose with regard to it.

Labor legislation lies, of course, chiefly with the states; but the new spirit and method of organization which must be effected are not to be brought about by legislations so much as by the common counsel and voluntary cooperation of capitalist, manager, and workman. Legislation can go only a very little way in commanding what shall be done. The organization of industry is a matter of corporate and individual initiative and of practical business arrangement. Those who really desire a new relationship between capital and labor can readily find a way to bring it about; and perhaps federal legislation can help more than state legislation could.

The object of all reform in this essential matter must be the genuine democratization

of industry, based upon a full recognition of the right of those who work, in whatever rank, to participate in some organic way in every decision which directly affects their welfare or the part they are to play in industry. Some positive legislation is practicable.

The Congress has already shown the way to one reform which should be world wide, by establishing the eight hour day as the standard day in every field of labor over which it can exercise control. It has sought to find the way to prevent child labor, and will, I hope and believe, presently find it. It has served the whole country by leading the way in developing the means of preserving and safeguarding life and health in dangerous industries. It can now help in the difficult task of giving a new form and spirit to industrial organization by coordinating the several agencies of conciliation and adjustment which have been brought into existence by the difficulties and mistaken policies of the present management of industry, and by setting up and developing new federal agencies of advice and information which may serve as a clearing house for the best experiments, and the best thought on this great matter, upon which every thinking man must be aware that the future development of society directly depends.

Agencies of international counsel and suggestion are presently to be created in connection with the League of Nations in this very field; but it is national action and the enlightened policy of individuals, corporations and societies within each nation that must bring about the actual reforms.

The new Congress opened last week with the Republicans in control. In the House they have a majority of 39; in the Senate a majority of 2. There are 49 Republicans and

#### A REPUBLICAN SPEAKER AGAIN

After an eight-year interval of Democratic leadership in Congress, with Champ Clark as the Speaker of the House, the Republicans are in control again and have elected as speaker Representative Frederick H. Gillett, of Massachusetts, who has been a member of Congress for over a quarter of a century. Rumor in Washington has it that there's an omen in the fact that when he posed for this photograph Speaker Gillett smashed to pieces the old gavel that has called the House to order for the last seventy or eighty years.

47 Democrats in the Senate; and in the House 237 Republicans, 194 Democrats, 2 Independents, 1 Prohibitionist and 1 Socialist. The organization of the two houses took place without incident. Senator Albert H. Cummins, of Iowa, a Progressive Republican who did not leave the party in 1912 when the Progressive party was formed, was elected as president *pro tempore* of the Senate—the officer who presides when the Vice-President of the United States is absent; and Representative Frederick H. Gillett, of Massachusetts, was chosen Speaker of the House.

The party leaders on the floor in the Senate are Mr. Henry Cabot Lodge, of Massachusetts, for the Republicans, and Mr. Thomas S. Martin, of Virginia, for the Democrats. In the House the Republican leader is Mr. Frank W. Mondell, of Wyoming, and the Democratic leader Mr. Champ Clark, of Missouri. An attempt was made by Democratic Representatives friendly to the Administration to oppose the selection of the former Speaker as Democratic leader, but it was unsuccessful. The man who would have been the Democratic candidate for President in 1912, if the Democratic National Convention had not had a rule requiring a two-thirds vote for the selection of a candidate, was too popular among his party associates for the opposition to be effective.

The President's message was read in each house on Tuesday. It was the

first time that a Presidential message had been sent to Congress by cable from a foreign country.

The first legislative act in either branch of Congress was the immediate passage by the House of the famous resolution for an amendment to the Federal Constitution extending the suffrage to women. The vote on the resolution was 304 to 89, an increase of 30 affirmative votes over the vote in January of last year and a decrease of 47 negative votes. Last year the resolution received precisely the required two-thirds vote in the House but failed by the narrowest of margins in the Senate. This time the margin in the House is 42 votes; and it is confidently predicted that the resolution will, within a few weeks, pass the Senate with a vote or two to spare. Both Representatives and Senators are changing their attitude toward suffrage because they are discovering that the people back home want it.

**The Tortoise Wins** Within two days of each other the big American navy seaplanes, "NC 1,"

"3" and "4," and the tiny British Sopwith and Martinsyde planes started from Newfoundland to attempt the long-talked of trans-Atlantic flight. With the British aviators it was a sporting chance, carefully prepared for thru many weeks of watchful waiting on the Newfoundland coast, but none the less hazardous in the extreme and dependent on the best of luck both meteorological and mechanical.

Luck failed the Martinsyde at the start. A treacherous wind prevented the plane from rising properly with its extra-heavy load of fuel and caught the wings in such a way as to break an axle and smash the engine and propeller to pieces, injuring both Captain Raynham and Captain Morgan seriously.

The Sopwith biplane got off better and was last seen from St. John's headed for Ireland and flying easily at a height of about 2000 feet. As it crossed the coast line the Sopwith dropt its steel undercarriage to lighten weight and wind resistance, Hawker and his navigator, Lieutenant Commander Grieve, counting on luck to help them land without the carriage if they reached the other side. About the time that they were due in Ireland, less than nineteen hours after the start, extras were calling the news that a Sopwith plane had been sighted off the Irish coast. No verification came, however, and after three days of anxious waiting without further news it was generally conceded that Hawker's daring had lost against too heavy odds. Ships of the British navy were sent out to search on the chance that their lifeboat or life-saving suits and emergency rations might have kept Hawker and Commander Grieve alive in case of accident to the plane.

The American NC boats went at the flight from an entirely different viewpoint, making it more of a business proposition than a sporting chance. All

#### THE LEADER OF THE HOUSE

Representative Frank W. Mondell, of Wyoming, has been chosen leader of the Republican majority in the House of Representatives.

three seaplanes left Trepassey Bay on May 16 bound for the Azores, a flight of 1352 miles. They carried a crew of six men each, extra fuel supply, food for two or three days, a wireless with a 400 mile radius, and they proceeded along a course dotted by ships of the United States navy stationed every fifty or sixty miles. The "NC 4," which had been delayed by engine trouble on the flight to Newfoundland, was the first to reach the Azores. It landed at Horta Bay fifteen hours after its start, forced down by fog there instead of continuing on to the United States naval base at Ponta Delgada. The flight was made without difficulties, maintaining an altitude of from two to three thousand feet, unusually high for so heavy a boat. After the crew had recovered from the strain and lack of sleep and the engines had been overhauled she went on to Ponta Delgada, where the supply of gasoline was renewed in preparation for the flight to Lisbon.

The "NC 4" is the sole survivor of the planes that attempted to fly across the Atlantic. The flagship of the NC fleet, the "NC 3," commanded by Commander John H. Towers, was lost in fog, forced to alight, and taxied on the surface of the water thru a heavy gale the last part of the trip, taking sixty hours from Newfoundland to Horta. The plane was so badly wrecked by wind and waves that it could not go on with the flight. The "NC 1" suffered even more from the same fog. When it alighted in heavy seas the right wing and one pontoon were damaged and one propeller was broken. The destroyer "Harding" rescued the crew and another destroyer later towed the abandoned seaplane into Horta.

# WHEN EVERYBODY FLIES

BY LAURENCE LA TOURETTE DRIGGS

*Mr. Driggs was one of the comparatively few expert aviators before the war made thousands of young men take up the profession of flying. He spent much of his time during the war in France and England studying the progress of military aviation, in the summer of 1918 he went to the west front as correspondent for The Independent*

**T**HE war in the air is over at last and the fun in the air is to come. Some of our youthful pilots are returning to college to finish their studies which war interrupted; others are seeking a start-in-life in business. All hope still to fly!

It is doubtful if any of us appreciate the full value of aviation to the progress of civilization. It is yet too early even to imagine the extent of its influence upon our future.

With every improvement in intercommunication between peoples comes greater information and education; attractive habits and customs are assimilated; fashions of dress and architecture and landscape gardening are quickly imitated; books, paintings, inventions and all the fanciful delectations of one civilization are brought eventually to another by means of the arteries of communication which link them together.

If this communication be sluggish, as between China and the outside world for an instance, then China suffers with the disease called "backwardness"

and the rest of the world knows little of the delights of China tea! If the communication be swift, as between Chicago and New York, then the denizen of either place enjoys the desirable opportunities of both!

Communication indeed spells all the difference between modern times and the dark ages of non-intercourse. And, of course, the swifter that communication is, the more desirable is the life that enjoys it.

Aviation brings vast possibilities to civilization in this respect. Certainly aviation is swift. No other transportation is so swift. And aviation is yet in its baby stages—its development is still to come. Aeroplanes today are even too swift for the safe and convenient use of the public, for present day types of aerial vehicles have been designed and built not for benefiting communication but for the purposes of war.

Commercial aviation will retain this swiftness of flying speed—will increase it many fold—but will provide safety devices for landing the aeroplane until it will come to rest at its destination as softly and surely as the giant steamship now touches her dock.

Aerial highways are not troubled with hills, valleys or snowslides. Soon they will be immune from storms at sea. For this lusty infant, Aviation, is growing apace, and secrets innumerable are being disclosed to its masters and students.

Its problems today are slight as com-

pared to those of the railway and steamship in the first dozen years of their existence. No such enormous work as the laying of rails, the tunneling thru the Rocky Mountains, the erecting of expensive terminals in the center of large cities—none of these conditions are necessary for the highways of the air!

Nor will a thousand employees be required to care for the comfort of five thousand passengers across the Atlantic when this voyage is cut down by aeroplane to one of twenty hours duration and less.

**T**HE true significance of the trans-Atlantic flight that was so magnificently accomplished by our American seaplane, the "NC 4," lies not in the sporting risks of this great feat but rather in the educational value of its preparation and the great impetus commercial aviation has received from its success.

Hundreds of aviators who were burning with the desire to be the first aerial Christopher Columbus now see a possibility of a lucrative future before them as skippers of these trans-Atlantic fliers. Manufacturers by the score are now busily seeking designs for aeroplanes that will fly these two thousand miles without stop. Without doubt aeroplanes will fly this "pond" without stop and without danger before the coming summer has passed. Consider for a moment what the perfection of these plans

© Underwood & Underwood

This photograph of the "NC 4" was taken sixty miles out at sea on the first leg of the ocean flight, from a smaller seaplane, the "F 5." The "NC 4" was the first of the navy planes to reach the Azores and the only one to start from there to Europe

Levick

*Tuning up the "NC 4" for the first part of her trans-Atlantic flight. This photograph shows to advantage the three propellers and the machinery that enabled the big seaplane to maintain an average speed of eighty-one knots from Newfoundland to the Azores*

will mean toward securing the future of commercial aviation! Consider what the effect of this rapid communication between the continents of America and Europe will be upon the business affairs of these peoples!

Drafts and bills of exchange will draw but two days' interest instead of eight or ten! Millions of dollars a day will be saved by this swiftness in conveyance!

Contracts may be signed and principals meet together with the same saving in time. Business relations in general between the two continents will be more intimate, more inexpensive, more far-reaching. And social affairs will multiply correspondingly until the Atlantic Ocean will constitute no greater barrier than does the Canadian line that separates Montreal and Quebec from us today.

Aviation promises in short to efface mere geographical barriers as completely as was the Mason and Dixon line effaced during the last generation by means of a livelier intercommunication. For, after all, intercommunication means but a better understanding between neighbors. How many frightful wars might have been avoided by grace of a better understanding between neighbors!

Thus may this great instrument of war be turned to a lasting advocate of peace. And the future historians will refer to the experimental "NC 4" which stood quivering with anticipation on the shores of Newfoundland as it peered

(Press Illustration)

*Commander Albert C. Read, of the "NC 4," and the pilot, Lieutenant Walter Hinton, going over one of their charts for the trans-Atlantic flight. Commander Read is an Annapolis graduate. He was put in charge of the Naval Air Station at Miami, Florida, in October, 1917, and in 1918 he was ordered to Washington to supervise the supply of material for all naval air stations. Lieutenant Hinton, who piloted the "NC 4," was an enlisted man who became an ensign in March, 1918, and on account of his skill as an aviator was appointed one of the pilots of the flying boat "H 16" on its flight last January from Rockaway Beach to Hampton Roads*

eagerly across the beckoning seas, fully conscious that an impatient world awaited news of its progress. Future historians will call the gallant commander and crew of this epoch-making flight the "pioneers of commercial aviation."

There is little doubt but that this extraordinary achievement attracts to day more human interest than does any other event in the world. War news, Bolshevism even the League of Na-

tions faded from the front page headlines to give place to the preparations of these daring aviators for their momentous flight.

The thoughts of the world are upon the victorious pioneers. Even Christopher Columbus himself attracted small public interest in comparison with them! This was undoubtedly due to the absence of intercommunication in those days.

Thrilling as is the thought of this great adventure and menacing as are its dangers there is in truth little likelihood of future voyagers by aeroplane suffering a worse fate than a momentary ducking in salt water should their aircrafts prove inadequate for their tasks.

The NC seaplanes carry a hull as watertight as that of a boat. With four motors they have sufficient power to carry six men and all the fuel and spare parts that may be needed.

If one or two motors fail the machine is still propelled thru the air while the engineers are making repairs. If all four fail simultaneously then a landing

on a quiet sea may be made, where necessary repairs are undertaken with every chance of success.

If the worst comes—as illustrated by the fate of "NC 1"—the wireless signals and colored lights bring them help long before the pilots suffer greatly from exposure. Lifebelts and the buoyant pontoons of their crafts will keep them afloat even if the structure of their seaplanes disintegrates.

# THE CASE OF JAPAN VS. CHINA

## A Fair Transaction

BY VISCOUNT ISHII

IMPERIAL JAPANESE AMBASSADOR TO THE UNITED STATES

**W**HATEVER may be the tone of the press both in Japan and in America, I can see no cause for pessimism in the relations between the two countries, for there is no real conflict of interest.

The question of China, particularly in regard to the Shantung settlement, is just now attracting a great deal of attention in this country. The best way to treat this much criticized question—criticized not without misunderstanding—is to lay the facts of the case before the American public and let the facts speak for themselves.

Germany acquired from China in 1898 a ninety-nine year leasehold of Kiao-Chau and its vicinities, together with the Tsingtao-Tsinan Railway and some mining concessions along the railway. The concessions thus granted were twofold, territorial and economic. On reducing the Tsingtao stronghold after two years' siege, Japan offered, on her own initiative, to surrender to China the German leasehold upon the transfer to Japan, by right of conquest, of the said territory being consented to by Germany in the Peace Conference. This voluntary offer of Japan's was of course distinctly to the advantage of China as she was then entirely powerless and without hope of ever recovering her territorial sovereignty in Shantung before the lapse of the lease, i. e., seventy-five years more.

Thus the treaty of 1915 placed China in a position to recover this important territory without any sacrifice of either blood or treasure. Far from being the unfair transaction it was represented to be by the Chinese, this treaty was in fact a most advantageous one from China's point of view. So far as the territorial integrity of China was concerned she had nothing at all to lose but everything to gain.

**A**S for the second kind of concessions, i. e., the economic concessions, Japan was by that treaty to retain them in her hands as in the days of German occupation. But here again Japan's good will was abundantly shown. Japan engaged by the agreement of 1918 to restore the civil and military administration of the province to China, by withdrawing the troops and police, and to make the Tsingtao-Tsinan Railway a joint concern of Japan and China instead of an absolutely foreign enterprise as was the case under German administration.

Thus China was to recover her territorial sovereignty in Shantung by the treaty of 1915 and partnership interest in the Tsinan Railway by the agreement of 1918.

When Japan took possession of Kiao-Chau in 1914 China remained neutral. Japan's action in Shantung even met with protest from China. Japan has since remained in occupation, by right of conquest, of Kiao-Chau and the railway zone from that port to Tsinan. Three years later, in 1917, China it is true declared war upon Germany, but her belligerency was on paper alone. There were no longer any German forces in China on which to make war nor did China send any military or naval forces abroad. Even had it been otherwise the fact of the declaration of war by China could not possibly have changed the relative status of Japan and China in regard to Shantung which had existed since 1914 and which they both had recognized officially. Japan had three years before China's entrance in the war replaced Germany in Shantung. The Chinese argument that by her declaration of war the leasehold treaty of 1898 *ipso facto* became null and void has therefore no legal ground and is certainly without pertinence in the present case.

These are the plain facts and I leave it to the American public to judge from these facts whether there was the least trace of unfairness on Japan's part in this perhaps over-generous dealing with China.

## Does Might Make Right?

BY GILBERT REID

FOUNDER OF THE INTERNATIONAL INSTITUTE OF CHINA

**H**AVING directed twenty-five years of my life to the welfare of China, it is with feelings of disappointment that I watch the injury being wrought by outside powers to Chinese national entity, independence and autonomy. The new national spirit of the Chinese people has received a rebuff from the deliberations at the Peace Conference. The high hopes which inspired the Chinese when they entered into war, under American initiative, have been proved to be illusory.

The Chinese, like many others, fancied that Might along with Militarism was to be ruled out at the Peace Conference and that Right and Right alone, was to sit enthroned. The only question to be asked would be, "What *ought* to be done?" never "What *can* be done?" Strict justice, never policy, expediency, compromise.

And yet the most delicate problem between China and Japan arising from the war was postponed to the end of the negotiations, and was then settled, apparently by the methods of compromise, but after all according to the wishes of Japan. Japan has been one of the Big Five, because of her military strength, and she wins at the Peace Table as against China, because it is expedient to yield to Japan.

This, then, is the chief disappointment—that the 400,000,000 of the Chinese people will have lost heart in the efficiency of righteousness in matters of diplomacy. The Chinese delegates in their published statement say of the Peace Conference settlement: "The Chinese delegation cannot but view it with disappointment and dissatisfaction." How much more so the great mass of the Chinese people whom we desire to instruct as to the superior teachings of Christianity and the superior character of American institutions.

The official statement continues: "Such a virtual substitution of Japan for Germany in Shantung is serious enough in itself, but it becomes grave when the position of Japan in Southern Manchuria and Eastern Mongolia is read in connection with it. Firmly intrenched on both sides of the Gulf of Pe-Chili, the water outlet of Peking, with a hold on the three trunk lines from Peking, and connecting it with the rest of China, the capital becomes but an enclave in the midst of Japanese influence."

Personally I held the position in China, and still hold it against the outcry of the majority (i. e., of foreigners) that it would have been better for China if German interests in China had been left alone, and not transferred to Japan as part of the spoils of war.

**A**LL this is general, but basal. A few specifications, however, will be necessary for forming a clear judgment:

1. When the British Government solicited the aid of Japan in attacking and subjugating the German-leased territory of Tsingtao, having no effect whatever on the ultimate issues of the European War, it became a duty of the British to see that no wrong be done to China and that redress be made for all wrongs, that might arise thru the incidents of war. Instead, Great Britain and her European Allies made secret agreements with Japan, confirming her in all German rights and concessions which she had seized on Chinese territory.

2. It was a violation of international law, an infraction of the Hague Convention, when Japan marched her troops across the neutral territory of China to attack Tsingtao. Was it not the duty of the Peace Conference to punish Japan for this wrong-doing and to make amends to China in harmony with the new conception of international relationship and the usages of war?

3. The agreements of 1915 made between Japan and China were made under duress from Japan. Even tho the Chinese Minister signed the agreements to avoid a war with Japan, was there not some

# ST. MIHIEL AND THE ARGONNE

BY HAMILTON HOLT

**I**N my last week's article I described our day's trip to Chateau Thierry, where, last June, America stopped the third great German drive and from whence, on July 17, the great Allied counter attack began that turned the tide of the war.

On February 6, exactly one week later, we took the train from Paris at 7:10 a. m. for our two days' trip to the St. Mihiel salient and the Argonne Forest. Our party consisted of Captain Burroughs as escorting officer, Mrs. Johnson, an American war correspondent, Mrs. Holt and myself.

Our plan was this: Upon our arrival at Bar-le-Duc at noon, where we were to be met by our car, we would proceed to the town of St. Mihiel and spend the afternoon in the St. Mihiel salient, pass the night at Moraigue Farm and the next day visit Verdun and the Argonne Forest.

It was a bleak wintry day and the countryside was covered with snow. Tho our car had the hood drawn down tight the chill French winds penetrated it and all our extra robes. The country had been thoroly fought over, but it was almost deserted now except for the many broken wagons and abandoned automobiles along the roadside. Finally we struck a series of forested hills and ravines and in a little while came to a ridge from whence we could see the town of St. Mihiel itself down in the valley across the Meuse. Crossing the river we motored up the side of a great hill on the top of which still remained the ruins of an old Roman camp built by Cæsar and undoubtedly used by the Roman legions as an observation post. We had now passed across No Man's Land and were in the advanced German positions. We could see the French trenches behind us running across the river into the valley and on over the hills until they disappeared in the horizon. We left our car and for the first time I found myself actually in a German trench. I must say that all I had heard about German thoroness was confirmed. The German trenches were far superior to anything I saw on any of the Allied fronts a year

*American Air Service, from Wide World Photos*

*The ruins of the old Roman camp built by Cæsar on top of a great hill and undoubtedly used by the Romans as an observation post. They were the chief defenses of St. Mihiel on the south of the city. In the background are reaches of the Meuse River*

ago. They were invariably paved and lined on either side with concrete. All were drained at the bottom. The pill boxes were models of military art. We went into one and looked thru the six inch slits of concrete and got fine views of the French lines across the river. This pill box was so concealed and camouflaged by overhanging layers of earth that it was completely invisible from aeroplanes and almost from spy-glasses. We descended into several German dugouts which also were better constructed and much more commodious than any French, English, American, Belgian or Italian that I have ever seen. They had indeed all the comforts of home. We then entered the city of St. Mihiel itself. It was completely intact, as the French and Americans took good care not to bombard it during the four years it was in Germany's possession.

We marveled at the elaborate German fortifications. There were thirty or forty miles of barbed wire entanglements behind the town in case the Germans had to retreat. The whole sector was criss-crossed with diminutive military portable railroads, for the Germans used very few motor trucks to transport their food and ammunition to the front. Many of the little locomotives and cars had been captured and were being used by our troops. They reminded me of the miniature railroad and its rolling stock at Coney Island. Along these roads were frequent dumps of military supplies where one could pick up almost anything from a bullet to a tank. Every-

hill the Germans held during the four years of the war and which served as a wonderful vantage point from which to spy on the French lines for miles around. We went down into the valley that led toward Xavey and finally came into the little town which will ever remain in American history as the place that marked our first fight in the Great War. Seicheprey was literally shot to pieces and there was hardly one stone standing upon another. Our First Division, commanded by General Bullard, first held the sector, but the First Division had only a few skirmishes with the enemy. It was the Twenty-sixth Division, relieving them, that received America's first taste of modern warfare. We followed for the rest of the afternoon the main road up thru the salient. It was thrilling to go thru the numerous towns where we knew our boys had followed the flag, fighting every inch of the way. Germany had held that region so long that all the signs along the roadside and in the villages were in German. If they had not been too large to put in a trunk I would have brought some home as souvenirs.

As we spun on and on traversing in two hours what it had taken our boys two days to do on foot, we saw numerous German camps and supply stations in the woods on either side of the road. The St. Mihiel salient was considered one of the best health resorts of the German army and it was supposed to be impregnable. But when six American divisions, one group pressing north and

where there were deserted camps, little flat wooden affairs. The separate shacks reminded me somewhat of our typical prairie sod huts with a stove pipe coming thru the top. Some of these huts, however, evidently used as officers' quarters, were of concrete and most luxuriously appointed.

We then started to motor up thru the salient, but first we made a detour to visit the town of Seicheprey, which, as may be remembered, I had visited just after the Germans had attacked our Twenty-sixth Division on May 21. We passed Mount Sec, the famous

one pressing west met at Vigneulles, 15,000 Germans were caught between the pincers and the pressure on the whole Verdun sector was relieved. Thus for the first time in four years it was possible to make with some expectation of success the long desired advance at the Argonne. We motored along until twilight overtook us and finally arrived at Moraigue Farm about dusk. As we drew up at this quaint old French farmhouse, taken over temporarily by the United States as a night's resting place for official visitors to the front, we were welcomed in a rather startling manner. No sooner had our car stopped before the dooryard than a number of trench rockets were sent up in honor of our arrival, and a few cannon shot off. A German captured aeroplane flanked one side of the walk to the front door and a dummy wooden German tank the other. An excellent collection of heavy and light field pieces were casually scattered about the yard. Three American officers were in the hall to welcome us and I found a kindred spirit in the commander who happened to be a genuine antique collector and had filled the house to overflowing with old French furniture and war trophies from the abandoned French farm houses and German camps of the region. There were ancient four poster beds with canopies at the top and old high backed armed chairs in all the rooms. A huge bright fire was burning in the hearth of the reception room and those rooms which did not have open fireplaces boasted little German stoves. It seems that Moraigue Farm had been used as the headquarters of one of the German high commands during the war and the German officers always insisted upon having every luxury available.

On the walls were guns, hand grenades and shells of all descriptions.

Across the entire length of the trophy room was festooned a complete round of machine gun bullets still attached to their belt. There must have been a thousand of them I should think. A German bicycle with springs instead of rubber tires was in a corner of the room; also a huge anti-tank gun, whose barrel rested on a tripod, tho the stock was supposed to be put against the man's shoulder when fired. It evidently had some "kick" when it went off, for no German, it was said, could be found who would fire one a second time.

We sat down at an excellently cooked and served American dinner. The American prohibition law had evidently gone into effect there, for no French wines were served. The only item of the entire program at Moraigue Farm that did not meet my unqualified approval was the French bed to which I was assigned. Springs stuck out thru the mattress like the hip bones of a starving horse, and when I turned over it jangled like a jazz band.

The next morning we were up early and started upon our all day's trip to the Argonne via Verdun. We motored all the morning thru what had been German territory during the first four years of the war. Again I was impressed with the innumerable German signs giving instructions as to where to go and what not to do. The word "Verboten" I can testify was used just as much as I had been led to expect. It seemed as tho every other sign said that something was forbidden. We were approaching Verdun from the east and soon came to the devastated area. I noticed that all the shade trees along the roads had been sawed at the sides about four feet from the ground. This was because in case of a retreat a charge of powder could be inserted in the gash and the tree blown up. A few had been

thus destroyed, but the Germans had to hurry too quickly in most cases to compass the full destruction they intended. At one spot a few miles east of Verdun we passed thru a most elaborate chain of colossal concrete posts six feet high and three or four feet thick, between which were suspended heavy iron chains. This colossal stone and metallic fence paralleled the German lines for about twelve miles. It was put up to prevent the Allied tanks breaking thru. About three feet in front of this anti-tank device was a camouflage wall so skilfully planned that the tanks could not see the chains until they were directly upon them. Evidently the one thing the Germans most feared was the tanks.

As we came into Verdun it was snowing hard. This prevented us from getting the best view of the universal devastation which makes Verdun the most impressive battlefield on earth. The snow rendered less hideous the cruelly pockmarked land than when I stood on the summit of Fort de Souville a year ago and watched the battle's progress. This time the landscape looked more like a burned-over lumber field in the Rocky Mountains than the terrible static sea of raw earth that seared itself into my consciousness a year ago. Down in the village American boys were holding the town instead of the French. We paid a visit again to the underground citadel, sixty feet under solid rock where 10,000 troops could be kept for six months in case of a siege. But my old friend, Colonel De Hay, was not there and the citadel was deserted.

We then reëntered our cars and motored to the edge of the Argonne Forest, stopping to visit a German observation post about twelve miles behind Verdun which [Continued on page 329

American troops got their first taste of modern warfare and suffered their heaviest losses at Seicheprey, which was completely ruined

# THE PEACEABLE, TIMID WOLF

BY WILLIAM J. LONG

**T**HERE must be something in a wolf which appeals powerfully to human imagination; otherwise there would be no proper wolf stories. The wolf, being a natural beast, is timid and peaceable; but the story, being "merely psychological," must account for our nervous reactions. And so it befalls, whenever I say that wolves never chase a man, that some fellow produces a tale to contradict me. Indeed, I contradict myself after a fashion, for I was once rushed by a pack of timber wolves; but that was pure comedy in the end, while my contradictory fellow always makes a near-tragedy of his tale—like this, from a friend of mine, who thinks he once escaped by the skin of his teeth from a ferocious wolf pack:

"It happened out in Minnesota one winter, when I was a boy. The season was a bitter one, and the cold had brought down from the north a pest of wolves—big, savage brutes that killed the settlers' stock and scared us half to death when they howled horribly around our lonely houses at night. Nobody ventured far from home after dark that winter, I can tell you; not unless he had to."

Here, tho I am following my friend intently, I cannot help jotting down the mental note that all good wolf stories are born of just such an atmosphere.

"Well, father and I were delayed by a broken sled one afternoon, and it was after sunset when we started on our way home. And a mighty lonely way it was, with nothing but woods, frozen ponds and one deserted shack on the ten-mile road. This winter road led for five or six miles thru solid forest; then it cut across a lake and thru a smaller

patch of forest, coming out by the clearing where our farm was. I remember vividly the night—so still, so moonlit, so killing cold! I can hear the sled runners squealing in the dry snow, and see the horses' breath in spurts of white rime.

"We came thru the first woods all right, hurrying as much as we dared with a loaded sled, and were slipping over the ice of the lake when — Wooooo! a wolf

howled like a lost soul behind us. I pricked up my ears at that, and so did the horses; but before we could catch breath there came an uproar that bristled the hair under our caps. It sounded as if a thousand wolves were yelling all at once, and they were right on our trail, and they were coming.

"Father gave just one look at the woods behind; then he lashed the horses. They were strong, and they jumped in the traces, jerking the sled along at a gallop. Only speed and marvelous good luck kept us from upsetting; for there was no pole to steady the sled, which slewed and slithered over the bare spots like a mad thing. Flying lumps of ice from the horses' hoofs stung or blinded us, and all the while we could hear a devilish uproar coming nearer and nearer.

"That rush over the ice was bad enough, but worse was waiting for us on the rough trail. We were dreading it, at least I was, for I knew the horses could never keep up the pace, when we hit the shore of the lake, and hit it

Paul Thompson

foul. The sled jumped in the air and came bang-up against a stump, splintering one of the runners and stopping us dead. I was pitched off on my head; but father flew out like a cat and landed at the horses' bridles, where he had his hands full. Before I was on my feet I heard him shouting, 'Where are you, son? Unhitch! unhitch!' and quick as I can tell it we had freed the horses, leaped for their backs and started on a run up the road, I ahead, father pounding along just behind, and behind him the howling.

"So we tore out of the last woods into the clearing, smashed over the bars and reached the barn all blowing. There I slid off to swing the heavy door open, but I didn't have sense enough left to keep out of the way of it. My horse was crazy with fright, and hardly had I started the door when he bolted against it, knocking me flat. At his heels came father on the jump and whisked thru the doorway, thinking me safe inside. That is the moment which comes back to me now most vividly, the moment when he disappeared and my heart went down with a horrible sinking. The thought of being left out there alone with the wolves fairly paralyzed me; then I yelled like a loon, and father came out quicker than he went in. He picked me up like a sack and dashed into the barn, slamming the door shut behind him. 'Safe, boy, safe!' was all he said; but his voice had a queer crack when he said it."

I have given only the outline and characteristic atmosphere of this wolf story, and it seems too bad to spoil it so; for as my friend tells it, with a wealth of picturesque detail, it is very thrilling—and true so far as it goes. After letting the tale soak into me, silently, to show my appreciation, I venture to ask, "Did you see any wolves that night?"

"No," he says frankly, "I didn't, and I didn't want to. The howling was plenty for me." And there you have it, a right good wolf story with everything properly in it except the wolves. There were no tracks about the barn or near the sled when father and son went forth with guns in their hands next

"The natural wolf has a lot of idle moments and in such moments he would rather indulge his curiosity or have a bit of excitement than fill his belly with meat"

morning; but there were numerous wolf-signs in the woods on both sides of the lake, and these with the ferocious howling were enough to convince any reasonable imagination that only the speed of two good horses saved two good men from death or mutilation.

By northern campfires I have listened to many other wolf stories; but the one I have just told is typical of all the others in that it is composed of two elements, one of undoubted truth, the other of unbridled imagination. That wolves howl at night with a clamor that is startling to an unhoused man; that when pinched by hunger they grow bold, like all other beasts; that they have a little of the dog's curiosity about man, and very much of the dog's impulse to run after anything which runs away—all that is natural and wolflike. But that they will ever chase a man, knowing that he is a man, seems very doubtful to one who has always found the wolf as difficult of approach as any eagle. In a word, one's experience of the natural wolf runs counter to all the wolf stories.

For example, when you surprise a pack of wolves they vanish, slyly or haltingly or in a headlong rush, according to the fashion of your approach; but when they surprise you at a quiet moment you may witness a fascinating bit of animal comedy. The older wolves of the pack, after one keen look, pass on as if you did not exist, and pretend to be indifferent so long as they are in your sight; after which they run like a scared bear for a mile or two, as you may learn by following their tracks. Meanwhile some young wolf is sure to be playing the same part that a fox plays in similar circumstances. He studies you intently, puzzled by your quietness, till he thinks he is mistaken or has the wrong angle on you; then he disappears, and you are wondering what has become of him when his nose is pushed cautiously from behind a bush. Learning nothing there he draws back, and now you must not stir, not even your head, while he goes to have another look at you from the rear. When you see him again he will be on the other flank; for he will not leave this interesting new thing till he has nosed it out from all sides inquisitively. And to frighten him at such a time, or to let him frighten you, is to miss all that is worth seeing.

Again, the natural wolf is like a dog in that he has a lot of idle moments when he wishes something would happen, and in such moments he would rather indulge his curiosity or have a bit of excitement than to fill his belly with meat. If a pack of wolves at rest

for the day happen to see you passing thru their solitude (they always rest in a sightly spot, where they can overlook a lake or a stretch of open country) some of them will follow you at a distance, keeping carefully out of your ken, till they find who you are or what you are doing. Should you pass their daybed without being seen, they will surely discover that fact when they begin to hunt at nightfall; and then a wolf, a young wolf especially, is apt to raise a great howl when he runs across your fresh snowshoe trail—not a ferocious howl, so far as I can understand its quality, but a howl with wonder in it, and some excitement. It is as if the wolf that found the strange scent in the snow were saying, "Come hither, all noses! Here's something new, something that you or I never smelled before. Woooo-ow-ow-ow! what's all this now?" And if the pack be made up mostly of young wolves, you will hear a wild chorus as they debate the matter of the trail which you have just left behind you.

The European wolf, judging him by a slight acquaintance, seems to be essentially like our timber wolf; but his natural timidity has been modified by

Paul Thompson

"The young wolf studies you intently, puzzled by your quietness, till he thinks he is mistaken or has the wrong angle on you"

frequent famines, and especially by dwelling near unarmed peasant folk who are mortally afraid of him. In summer he lives shyly in the high solitudes, where he manages to pick up enough mice, grubs and "such small deer" to satisfy his appetite; but in winter he is always hungry, his natural food having been killed off, and when hunger grows keen he descends from his stronghold to raid the farms. A very little of his raiding starts a veritable reign of terror; every man, woman

or child he meets runs away from him, and presently he becomes bold or even dangerous. At least I can fancy him to be dangerous, having been in a village when a severe winter brought wolves down from the mountains, and when the terrified villagers related specific instances of wolf ferocity. As I searched for the brutes the natives would advise or implore me not to venture into the forest alone; the rural guards kept themselves housed at night, and a single guard, tho armed with a carbine, would not cross the open country even by daylight for fear of meeting the wolf pack.

It was hard for a stranger to decide whether such fears came from bitter experience or were, like our own fear of the wolf, the product of a lively imagination; but one was soon forced to the conclusion that with so much smoke there must be some fire also. Moreover, as evidence of the fire, I found official records to indicate that the European wolf may be so crazed by hunger as to kill and eat human beings.

Such records inevitably pass over into fireside tales, repeated, enlarged, embellished, and thereafter the wolf's character is blackened forever. He is naturally a timid beast, but his one evil deed, done in a moment of fierce hunger, becomes typical of a ferocious disposition. Our pioneers brought many of these harrowing tales to the New World and applied them to our own timber wolf, who is a more powerful beast than his European relative, and much more destructive to game or stock, but who is guiltless, I think, of the charge of following men with intent to kill. Yet the tale is always against him, and therefore it befalls when a belated traveler hears a wolf clamor behind him that terror gets into his head and panic into his heels. If he trusted his ears, he would know that the wild clamor is invariably stationary, and ends where it began; but under the spell of his imagination the fierce cry grows louder, sweeps nearer, until he dashes away headlong for shelter and appears with another blood-curdling story of his flight from a howling pack of wolves.

Curiously enough these terrible packs are always howling when they charge home, tho it is one of the marked characteristics of a wolf that he is silent when he is stalking or running down game. His howling has nothing to do with his hunting, being reserved for social and other occasions; he wastes no breath in noise, as hounds do, when he means to overtake anything. Again and again, when wolves have howled on my trail or made night hideous around my [Continued on page 330]

# PIONEERING IN POETRY

BY AMY LOWELL

*Miss Lowell, a sister of President Lowell of Harvard, is one of the leading poets in the new school of American poetry. She is the author of a number of volumes of verse, and has helped thru her criticism many other writers of the "New Movement." Among the best known of Miss Lowell's books are "A Dance of Many Colored Glass," "Sword Blades and Poppy Seed," "Six French Poets," "Men, Women and Ghosts." This article is from "Tendencies in Modern American Poetry," published by The Macmillan Company, copyright 1917*

WHEN people speak of the "New Poetry," they generally mean that poetry which is written in the newer, freer, forms. But such a distinction is misleading in the extreme, for, after all, forms are forms, of no particular value unless they are the necessary and adequate clothing to some particular manner of thought.

There is a "New Poetry" today, and the new forms are a part of its attire, but the body is more important than the clothing and existed before it. All real changes are a matter of slow growth, of evolution. The beginnings of a change are almost imperceptible, the final stages, on the other hand, being so radical that every one remarks them, and with such astonishment that the cry of "freak," "charlatan," is almost sure to be raised by ignorant readers.

A great artistic movement is as inevitable a thing as the growth of a race. But, as in races, individuals possess differing characteristics, so the various artists whose work represents a revolt may differ most widely one from another, and yet, in varying still more widely from artists of other epochs, they create what critics call a "movement."

The so-called "new movement" in American poetry is evidence of the rise of a native school. The welding together of the whole country which the war has brought about, the mobilizing of our whole population into a single, strenuous endeavor has produced a more poignant sense of nationality than has recently been the case in this country of enormous spaces and heterogeneous population. Hyphens are submerged in the solid overprinting of the word "America." We are no more colonies of this or that other land, but ourselves, different from all other peoples whatsoever.

It is this realization of ourselves that has drawn us into an understanding sympathy

with our Allies hardly to be conceived of before. And let us make no mistake; such a result cannot be reached thru a devotion to the teachings of materialism. The real truth is that at a time when most people were bewailing the growth of materialism, already, beneath the surface, the seething of a new idealism was in process.

Long before the shadow of battle flung itself over the world, the travail of this idealism began. Slowly, painfully, it took on a shape, hidden away in the dreams and desires of unknown men.

Literature is rooted to life, and altho a work of art is great only because of its esthetic importance, still its very estheticism is conditioned by its sincerity and by the strength of its roots. Posterity cares nothing for the views which urged a man to write; to it, the poetry, its beauty as a work of art, is the only

thing which matters. But that beauty could not exist without the soil from which it draws its sustenance, and it is a fact that those works of art which are superficial or meretricious do certainly perish remarkably soon. This is why time alone can determine a man's fate. Tinsel can be made to look extraordinarily like gold; it is only wear which rubs off the plating.

To a certain extent the change which marks American poetry has been going on in the literature of other countries also. But not quite in the same way. Each country approaches an evolutionary step from its own racial angle, and they move alternately, first one leads and then another, but all together, if we look back a century or so, move the world forward into a new path. At the moment of writing, it is America who has taken the last, most advanced step.

It is not my intention, here, to combat the opinions of the conservatives. Conservatives are always with us, they have been opposing change ever since the days of the cave-men. But, fortunately for mankind, they agitate in vain.

Already the more open minded see that the change going on in the arts is not a mere frivolous interest in experiment. Already the reasons for difference begin to stand out clearly.

We who watch realize something of the grandeur of conception toward which this evolution is working.

The modern poets are less concerned with dogma and more with truth. They see in the universe a huge symbol, and so absolute has this symbol become to them that they have no need to dwell constantly upon its symbolic meaning. For this reason, the symbol has taken on a new intensity, and is given much prominence. What appear to be pure nature poems are of course so, but in a different way from most nature poems of the older writers; for nature is not now something separate from man, man and nature are recognized as a part of a whole, man being a part of nature, and all falling into a place in a vast plan, the key to which is natural science.

In some modern American poets this attitude is more conscious than in others, but all have been affected by it; it has modified poetry, as it is more slowly modifying the whole of our social fabric.

Poets are always the advance guard of literature; the advance guard of life.

# THREE POEMS

BY AMY LOWELL

## Spectacles

He was a landscape architect.

All day he planned Dutch gardens: rectangular, squared with tulips; Italian gardens: dark with myrtle, thick with running water; English gardens: prim, box-edged, espaliered fruit trees flickering on walls, borders of snapdragons, pansies, marjoram, rue.

On Saturday afternoons, he did not walk into the country. He paid a quarter and went to a cinema show, and gazed—gazed—at marching soldiers, at guns firing and recoiling, at waste grounds strewn with mutilated dead. When he took off his glasses there was moisture upon them, and his eyes hurt. He could not see to use a periscope, they said, yet he could draw gardens.

His firm dismissed him for designing a military garden: forts, and redoubts, and salients, in hemlock and yew, and a puzzle of ditches, damp, deep, floored with forget-me-nots. It was a wonderful thing, but quite mad, of course.

When they took his body from the river, the eyes were wide open, and the lids were so stiffened that they buried him without closing them.

## Entente Cordiale

The young gentleman from the foreign nation  
Sat on the sofa and smiled.

He stayed for two hours and I talked to him.

He answered agreeably,

He was very precise, very graceful, very enthusiastic.

I thought:

Is it possible that there are no nations, only individuals?

That it is the few who give gold and flowers,

While the many have only copper

So worn that even the stamp is obliterated?

I talked to the young gentleman from the foreign nation,

And the faint smell of copper assailed my nostrils:

Copper,

Twisted copper coins dropt by old women

Into the alms-boxes of venerable churches.

## To Winky

Cat,

Cat,

What are you?

Son, thru a thousand generations, of the black leopards  
Padding among the sprigs of young bamboo;

Descendant of many removals from the white panthers  
Who crouch by night under the loquat-trees?

You crouch under the orange begonias,

And your eyes are green

With the violence of murder,

Or half-closed and stealthy

Like your sheathed claws.

Slowly, slowly,

You rise and stretch

In a glossiness of beautiful curves,

Of muscles fluctuating under black, glazed hair.

Cat,

You are a strange creature.

You sit on your haunches

And yawn,

But when you leap

I can almost hear the whine

Of a released string,

And I look to see its flaccid shaking

In the place whence you sprang.

You carry your tail as a banner,

Slowly it passes my chair,

But when I look for you, you are on the table

Moving easily among the most delicate porcelains.

Your food is a matter of importance

And you are insistent on having

Your wants attended to,

And yet you will eat a bird and its feathers

Apparently without injury.

In the night I hear you crying,

But if I try to find you

There are only the shadows of rhododendron leaves

Brushing the ground.

When you come in out of the rain,

All wet and with your tail full of burrs,

You fawn upon me in coils and subtleties;

But once you are dry

You leave me with a gesture of inconceivable impudence,

Conveyed thru the vanishing quirk of your tail

As you slide thru the open door.

You walk as a king scorning his subjects;

You flirt with me as a concubine in robes of silk.

Cat,

I am afraid of your poisonous beauty;

I have seen you torturing a mouse.

Yet when you lie purring in my lap

I forget everything but how soft you are,

And it is only when I feel your claws open upon my  
hand

That I remember

Remember a puma lying out on a branch above my head

Years ago.

Shall I choke you, Cat,

Or kiss you?

Really I do not know.

# WONDER WHAT A KAISER THINKS ABOUT

## An Unauthentic Interview

**W**ELL, here I am—stranded on a muddy little island in this accursed swamp of a country with the hunters just over the hill wondering how to snake me out. I feel just like that fox I hunted in Pomerania that escaped us in the fens. I only hope I have equal luck. But I would never have picked out Holland for a 'place in the sun.' I know I am just about as welcome as the small pox here, but I can stand that. I have been in places before where I was not particularly welcome either.

"Sometimes I wonder how it happened. Perhaps I am the only German who wasn't allowed to know. That's the mischief of being a king; people lie to you so. I used to catch Hindenburg and Ludendorff whispering together and I would have given an estate or two to have overheard. But, of course, I was too dignified to ask. And when they did tell me things I never knew whether to believe them or not. Poor Nicky was just that way. They had him off the throne before he knew that there was a mutinous soldier in Russia. I'm glad that I was nearer the frontier than he was when things began to cave in here. But Nicky never did know enough to come in when it rained.

"I wonder what has come over Europe? Everything has gone mad all at once, just as the palace furniture danced around the room the first night I ever got drunk. (How grand-dad did scold! Well, I learned to hold my liquor since.) Not a year ago crowns were quite the fashion. We had a good score

of sovereigns in Germany alone and the export trade was booming wonderfully. There was Perdy of Bulgaria and—until the Allies pushed him off—Tino in Greece. There was a Hohenzollern in Rumania even, tho the ingrate had no sense of family loyalty. Willy of Wied was giving Albania absent treatment, but I could have got him back again on the throne if the war had gone right; that is, if he was worth the bother. Poland was quite willing to be a kingdom then and with an aristocracy at that; they hadn't discovered that they had been life-long socialists then! I had a likely chap all picked out for Lithuania. Finland seemed only too happy to get some good German at the top. Now they won't look at the best of our princes. How many false hearts there are in this world.

"Then there were—let's count—Kurland, Livland, Estland, Ukrania, Georgia, Circassia and sixteen other little kingdoms to be made out of Russia. Once I had got rid of my troubles in the west I would have showed King Trotzky a thing or two! He was useful in his way, but too impudent. But I'd have chucked the whole business, Poland and all, to have had Nicky back again. It creates a bad precedent to have *any* king deposed no matter how he acts to you. Why, I would even have let Albert stay on the throne if I could have had Antwerp and a naval base at Ostend! Von Bissing used to talk differently, I know. But he was prejudiced. Those Belgians used to annoy him so with their jokes and songs that

*Press Illustrating*

*The ex-Kaiser taking his daily walk thru the castle grounds at Amerongen, Holland, where he has lived since last November*

he would go half wild with vexation. But none of the military could take a joke. If Von Tirpitz ever had a sense of humor he could never have worn the walrus-shaped whiskers that he did, nor Hindenburg wouldn't have stood for that thumbtack-studded statue.

"But I half expected Russia and Austria to go to pieces. I was always fond of Franz and Karl wasn't half a bad fellow, tho I *did* have to scold him when he let on to France that he didn't care who got Alsace-Lorraine. (Much business it was of his! I offered a lot of Austria to Italy once just before Italy got into the war, but that's another story.) But, after all, there were a lot of people in those countries who weren't Germans. And so they knew nothing about our good, old German loyalty and fidelity and so on. They might do anything. But Germany! Why, I was so sure of the Germans that I even dropt that little plan of universal suffrage in Prussia which I had fixed up when things got a bit skittish in '17. I wish now I had put it thru. After all, we had universal suffrage in the Empire and it never hurt me any. But Prussia—somehow—well I was a bit sentimental about keeping even the looks of things there. My medieval tastes and all that. Like stained glass and knights in armor. Germany was business; I let Krupp and Ludendorff run that for me, with old Bethmann to make the apologies when I said something out loud that I should have kept under my mustache.

But Prussia was tradition, and even a varnish of democracy would have spoiled it. And, anyhow, would a franchise or so have stopped this revolution? I've tried concessions before, inviting Radicals to court and so on, but it never did any good. Who says a good word for me now of all those who were strew-

*International Film*

ing flowers of speech in my path a few months back?

"I suppose the trouble is I have been too modest. I took for granted that these generals knew their business and I let them manage the war, in the main. If I had stepped in vigorously and broken the French line (I was always *telling* the army to do just that thing), the war would have been over ever so long ago. And to let America come in. That was a fool trick. And I shouldn't have let Hertling play with those strikers and Socialists and riff-raff in that shilly-shally fashion. A little blood and iron, as I used to tell Bismarck when I was a boy, would put a stop to all that nonsense. It really required a master mind to rescue Germany from the fix into which somebody (somebody else, I mean) had got her, and I—well, I think I will go in. It looks like rain."

# ST. MIHIEL AND THE ARGONNE

(Continued from page 323)

was made especially for the German Crown Prince when it was expected his cohorts would seize the fortress. This post was nothing but an ordinary dwelling house within which had been built a concrete observation post. We climbed up the stairs to the attic where his erstwhile royal highness was wont to gaze thru his glass at unattainable Verdun. The wind was blowing a gale thru the broken windows of the house and I was surprized to see shivering under the stairs leading to the attic a large yellow eyed black cat. Upon what it lived one could only surmise for there was not an inhabitant in the ruined town and there had not been one probably since the Germans left last year.

We stopped for luncheon at a little village where a regiment of American negro troops were stationed. They were engaged in salvaging the neighboring battlefields and some were cutting stone out of a nearby quarry. They all wore great sleeveless brown leather jackets and as they worked they sang their weird melodies, both plantation and rag. We had our luncheon with the American white officers in a little hut about as big as an American railroad flagman's house. We ate our meal sitting on the bed and some boxes, but we had real American doughnuts for dessert, which were brought by a smiling negro orderly who hailed from Mississippi. We started on our way again and shortly reached the Argonne Forest.

THE Argonne is not a continuous forest but a succession of woods and clearings. It is traversed by rivers and small streams which have worn deep ravines between the hills and these ravines afford fine protection for any defending troops.

Here we saw many of the famous fancy rest camps the Germans had built. We went into one where the officers' houses were made of concrete, and elaborately decorated. There were bowling alleys and shooting galleries, club houses, etc. On the sides of the ravine facing the enemy were innumerable pill boxes and machine gun nests. Some of the latter were in the tree tops. The ground was intersected with trenches running in all directions.

In the woods we came upon numerous German graveyards. They were evidently intended to be permanent, for they were surrounded by stone fences and each grave had a large cross-stone at its head. We saw the road and the machine where our boys had come thru this region. We visited the elaborate dugouts from which they had ousted the Germans. One is lost in wonder in imagining how human beings could fight and

advance thru such an impregnable sector with its innumerable trenches, barbed wire entanglements, pill boxes and camouflaged machine gun nests. But it was the spirit of America that accomplished this feat and tho our troops were slaughtered by the thousands they never stopped pushing ahead.

AMERICA surely took the hardest task assigned to any army during the war when her troops captured the Argonne. This was of course fitting, as we had not suffered as much as the French and English and the hardest job properly belonged to us. But it was certainly a task to test the courage of even the most dauntless. And the fact that our boys never stopped but consistently and persistently went ahead until every German was dead or out of that forest speaks eloquently for the American fighting spirit. We lost thousands and thousands of men, many more than the reports first indicated, and as fast as one division was battered to pieces another came charging forward to take its place. There is no more gallant action in the annals of war than the charge of the American divisions thru the Argonne which cleaned Germany out of her greatest strongholds on the entire western front and made possible the final Allied victory.

We passed dumps where thousands of hats, guns and equipment of both friend and foe were brought in by the salvage corps from the neighboring forests. Everything that the most inveterate souvenir hunter could desire was there in quality as well as quantity. We were told to help ourselves and if any of the readers of The Independent would like to see a fairly good collection of Argonne souvenirs I hereby invite him to call at my home the next time he visits New York.

We then left the Argonne Forest and came down the long road to Bar-le-Duc. But the snow covered roads slowed us up so that we missed the afternoon train to Paris. We therefore had the interesting but extremely discomfiting experience of having to take the midnight military express to the capital, which compelled us to sit up all night and explain at every station to the throng who tried to enter our compartment that there was no room for any more.

## THE PEACEABLE, TIMID WOLF

(Continued from page 325)

winter camp, I have gone as near them as I could get, giving them every opportunity for a man hunt; but tho they are bolder by night than by day, as are most other beasts, they have never save in one peculiar instance shown any evidence of a hostile or dangerous disposition. And then they scared me properly, and let me know how a man might feel if he were running with a pack of wolves at his heels.

THE startling exception came one winter afternoon as I was crossing a frozen lake in a snowstorm. It was almost dusk when I came out of the woods, hurrying because I had still far to go, and headed fair across the middle of the lake. Soon the wind was blowing the snowflakes in level lines; what with the snow and the darkened air it became difficult to keep one's bearings, and in order to shape my course more surely I edged in nearer and nearer to the weather shore.

Two or three times I had a vague impression that something moved in the woods, and moved so as to keep abreast of me as I held my way steadily down the lake; but the flying snowflakes interfered with clear vision until I began to come under the lee of an evergreen point that thrust itself into the white expanse ahead.

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course was reduced from three years to two years and six months. The cessation of hostilities will not end the need for nurses abroad; they will be needed, in large numbers, for reconstruction work, and for the establishment of schools of nursing in the different countries of Europe for a long time to come. We plan, therefore, to continue the course of two years and six months.

For information write to MISS AGNES S. WARD, Superintendent

Then I surely saw a creeping motion among the trees on my left, and stopped dead in my tracks to watch it. The next instant the underbrush was ripped open in a dozen places and a pack of wolves rushed out. One darted down the lake, so as to get between me and the point; another that I dared not watch sped up the lake, at a broad angle from the course of the first; the rest spread into a fan-shaped formation as they came on, and in a twinkling every avenue of escape to the woods was shut by a loping wolf. There was left only a fight or a straightaway run across the ice.

The wolves were perhaps a hundred yards away when they broke cover. They came on easily, as if there were no call to hurry; but to any creature with imagination there was something deadly in that broadening fan, which would presently close its ends like a trap. The brutes uttered no cry, not a howl or yelp of any kind. They were upwind from me, and I think now that they had seen me when I came out of the woods and had mistaken me in the storm for a deer or some other game animal; but at the moment their rush certainly looked dangerous, and their grim silence was more terrifying than any outcry.

Bending down I threw off the snowshoe straps for free footing and, as I straightened up, pulled the heavy revolver from its sheath. Then I stood stock-still, which is the most surprising thing you can do to any charging beast: he is so used to running away from trouble himself, and to seeing other beasts run away from it, that a motionless figure puzzles him, throws him off his balance and makes him suspect that there is something wrong somewhere.

From the left end of the charging line a huge wolf shot out suddenly at top speed, circling to get behind me, and I picked him out as the one I must first kill. But I would wait till the last moment for two reasons: first, because shooting must be straight, there being only half as many cartridges as there were wolves; and second, because here was the chance of a lifetime to learn whether a wolf, knowing what he was doing, would ever run into a man. The mental process is slow and orderly now, but at the time it came and went with a snowflake that swept before my eyes.

As the big wolf whirled in on the run, still some forty yards away, the wind came fair from me to him. He got his first whiff of the man scent, and with a terrible shock. I think, since its effect was a contortion that looked as if it might dislocate his back. At the top of a jump he tried to check himself by a violent wiggle; with his legs stiff as bars he came down, slid to his toes, and leaped straight up with a wild yelp, as if I had shot him. Yet up to that moment, when his nose told him what game he was running, I had not made a sound or moved a muscle.

That single yelp stopped the rush as if by magic. Most of the pack scattered on the instant; but two or three of the young or wolves that did not yet understand their blunder hesitated a bit, with surprise written all over them. Then they, too, caught the alarm, and the whole pack went speeding for cover in immense bounds, which grew convulsive when I began to play my part in the little comedy. At the shot every flying brute went up in the air, as if safety lay only in the clouds or on the other side of the mountain.

Such are the real wolves. I see them yet, the ones porrodding their grizzled coats, streaming away like flushed quail and vanishing into the dusky woods with one last tremendous jump, whenever I hear a good wolf story.

# Perfect Soft Water In the Textile Mill

Sectional View of  
Refinite Water Softener

**BECAUSE** water of no hardness in a textile mill so greatly improves the quality of the product manufactured, many textile mills producing some of the world's most famous brands have installed the Refinite Water Softener.

They find that with Refinite softened water there's no gummy soap curd to interfere with the various intricate processes and that the finished products retain their natural strength of fibre and smoothness and softness of feel. Refinite is Nature's own water softener—a mineral, mined from the Black Hills of South Dakota. It is used only in our simple water softening system.

**REFINITE**  
ROYAL OF THE CLOUDS  
TRADE MARK

The Refinite Water Softener is built in sizes to suit all needs. Quickly installed. Occupies very little space for the volume of water handled. Reasonable in price—exceedingly low in operating cost.

Refinite Softeners are used and approved by textile mills, by laundries, by steam power plants (to prevent boiler scale), by hotels, apartment buildings and by private homes in all parts of the country. They are producing perfect soft water at the lowest cost. Write to our district office nearest you for full information.

## You Will Like These Clear Havana Cigars

No cash in advance; no C. O. D.  
Prepaid; parcel post, insured

If your taste is for superior Havana goods, Thompson's Diplomáticos will please you. And you can smoke them without feeling extravagant.

Havana filler and wrapper, 4 3/4 inches long, hand-made by skilled Cuban workmen with the aroma and flavor for which good Havana cigars are noted.

TRY THEM AT OUR EXPENSE  
PAY US ONLY IF PLEASED

Similar cigars retail at 15 cents each, or \$12.50 per one hundred. By our "direct to smokers" plan, eliminating all unnecessary intermediate expenses, you are saved exactly 3 1/2 cents on each cigar.

Send no money—just write us on your letterhead or enclose business card. We will forward prepaid one hundred Thompson's Diplomáticos. Smoke four or five; if they please you, mail us your check for \$9.00, if not return remainder at our expense. State whether you prefer light, medium or dark color.

THOMPSON & COMPANY, INC.  
Tampa, Florida

## WHY FIRE INSURANCE COSTS MORE

BY W. E. UNDERWOOD

SOME time last year when fire insurance managers realized that costs of material and labor were steadily advancing and that the existing provisions for rate making in calculating premiums had entirely omitted any means of meeting such a contingency, it was found necessary to resort to some temporary expedient which would aid in covering the increased initial expense incurred in writing business. The justification of such action lies in the actual experience of every citizen. Each one of us is conscious of the heavy rise in prices since the United States became a belligerent. The earning power of labor had to be increased to meet this addition in the cost of living. The employees of fire insurance companies could not be excepted from the movement. The same rule applied to all materials.

The position of the fire insurance companies was a difficult one. They realized the impracticability of advancing rates in the same proportion that other commodities had risen, however logical such a course might be. The 100,000 men composing their local agency force were facing increased expenses and felt that their commission compensation should be raised. This suggestion evidently received little or no consideration from the managers, presumably on the theory that, as insurable values had increased as the result of advanced prices, commission incomes would increase proportionably. But the situation as to salaried employees and materials essential to the conduct of the business was different. Increased premium income by the companies affected neither them nor their salaried forces. An increase in the amount at risk, while it would augment the amount of money earned by agents working on a percentage commission basis, would not have a like effect on the net results achieved by the companies for the reason that the contingent loss liability rises with the amount at risk.

After conferring over the problem the companies finally decided to make a surcharge of 10 per cent in rates applicable thruout the country. It is no exaggeration perhaps to assert that this arrangement was regarded as reasonable by at least 80 per cent of the insurance commissioners. The facts were indisputable.

Now that the war is over, the insurance commissioners of several states are demanding that the 10 per cent surcharge be removed. While it is true that the war is indubitably the cause of the excessive cost of living, it is also true that the cessation of actual hostilities has not operated as yet to change the effect in that direction. In point of truth, prices are as high now, if not higher, than they were at the time the armistice was signed. The insurance commissioner of Michigan several weeks ago issued a mandatory order to the companies requiring the removal of the surcharge, basing his action on the results of the operations of the companies in his state during 1918. This is virtually an experience of but six months, the average time risks were in force. From that viewpoint alone the proposition is impracticable. But there is a greater and weightier reason to render it untenable. The experience in one state is

not, cannot be, controlling. If fire insurance companies operated on that basis there are some states in the United States and some localities in the world which on their individual experience would be debarred from insurance protection. To apply that principle to the property owners of California and Maryland would ruin them.

The companies have met the Michigan order by going into court on a petition to restrain the commissioner from enforcing his order and the matter is now subject to judicial determination in that state.

Some time ago, as the result of a similar order from the insurance commissioner of Kansas, the question went into the courts of that state. But, pending a review and decision the surcharge is being collected separately, the proceeds deposited with the insurance department, to be returned to policyholders if the case goes against the companies and to be paid over to them if they win the legal contest.

Several weeks ago, at a meeting of insurance commissioners held in St. Louis, the insurance commissioner of Virginia made a vigorous attack on the companies for continuing the surcharge in his state and, as a result of the discussion which followed, the whole question was referred for investigation and report to a special committee appointed for that purpose.

**H**AVING all the facts in my possession, I think it just and proper to premium-payers and insurers to express my opinion on the merits of the controversy which, it seems, is widening. Were the companies justified in making the surcharge? In finding an answer to this question it is neither necessary nor germane to take the net results of their business up to the beginning of 1918 into consideration. Some of them made a good profit; others will show a loss quite as substantial. They were facing an extraordinary economic condition. It was simply necessary that the vast army of office and traveling employees, inspectors, surveyors and special agents receive enough more money to meet the demands on their incomes made by higher living costs. This necessity was one which all lines of business faced. The insurance rates as they stood were based on normal conditions. Something had to be done to meet the abnormal conditions. The expedient adopted seems to me a reasonable one, particularly when we consider the rate of advance as compared with the average of all other commodities. Unless my personal experience is exceptional, we are now paying 20 to 100 per cent increase on what we buy. I should regard myself as most fortunate if my expenses had increased only 10 per cent.

As the reason given for the surcharge was based on conditions growing out of the war, it is argued, sophistically, that now the war is over, this extra cost for fire insurance should be removed. The critics refuse to consider that altho the fighting has ceased and we are within a reasonable time of securing a treaty of peace, the economic confusion growing out of the war has not been remedied. As previously observed, costs have been heavier since the enemy surrendered than they have ever been in this country before. Neither the cost of wages nor materials has decreased; on the contrary, they seem to ascend continually.

I therefore conclude that, having proper regard for the obligations they assume, the companies are justified in continuing the extra charge until the situation has assumed one more nearly resembling the normal, that is to say, the conditions existing before the surcharge was ordered.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

# THE INVESTMENT SITUATION

BY LUIGI CRISCUOLO

DIRECTOR OF THE INDEPENDENT SERVICE TO INVESTORS

## Corporate Finances

**T**HE successful close of the Victory Loan campaign has tended to stimulate offerings of corporation securities which during the previous months had been put in shape to market. The outlook points to a large amount of corporate financing by established companies which require capital to provide for business expansion both in domestic and foreign trade, to take care of maturing obligations of municipalities, railroads and other corporations.

Among the large offerings was that of \$50,000,000 General Motors Corporation Debenture Stock which a syndicate of New York investment houses offered at \$90 per share, affording a return of 6.67 per cent. The announcement was made that in June the stockholders of the corporation are to vote to authorize a total of \$500,000,000 Debenture Stock and a similar amount of Common Stock, thus placing the General Motors in the rank with the United States Steel Corporation as a billion dollar industry.

There have also been quite a number of smaller issues, including industrial, railroad and public utility securities. The best test for the financial conditions of the country is the manner in which investors respond to the security offerings which are made directly following the close of a great Government loan campaign like the last. While the public responded generously to the Government's call for funds there is no doubt that a great deal of idle money is on deposit in the banks awaiting investment in some form of security yielding a generous return.

## The Oil Securities

The market recently experienced an abnormal rise in oil stocks which as usual had somewhat of a setback during the first half of May. Oil is a highly essential raw product for which there will be a good demand for many years. Well-managed oil companies have made millions of dollars for their stockholders, but such companies in many cases were refining companies which took no risks and merely bought crude oil for refining and the product at a profit. The Standard Oil companies are of this type and many independent concerns have repeated the success of the former.

It is natural that with the large and steadily increasing demand for oil in industries all over the world, the irresponsible or fraudulent stock promoter should become active and begin to organize wild-cat companies whose stocks are offered in exchange for the savings of small investors or their holdings of Liberty Bonds, with promises of enormous profits such as successful companies have made. There is much merit in many oil propositions that have come on the market recently and there is no reason why a business man who can afford to take some risks should not buy oil stocks outright when offered by reputable firms.

## The Trust Cases

In a recent decision on the legality of Secretary Redfield's plans for stabilizing prices, Attorney General Palmer indicated that the policy of the Government with respect to the Sherman Anti-Trust Law had not changed, altho the war's progress had prevented prosecution under the act. It is obvious that so long as the law is in existence, the chief legal executive of the Gov-

ernment can take no other stand. If the law is detrimental to the progress of lawful business, it is up to the new Congress to take such action as will insure the progress of American industry, particularly at this moment when every nation in Europe is striving for business in competition with its neighbors. I do not know that the country would suffer to any extent by the repeal of the law, and the fact that during the war it was not enforced shows that the Administration must have had some doubts as to the advisability of standing by it to the letter.

## The Railroads

The railroad situation still dominates and the *Railway Age* puts it very pertinently when it says that the railroad system of the United States is bankrupt. It is my opinion that while the railroads are not bankrupt, at least their finances must be in a very precarious condition and one requiring immediate attention. The *Railway Age* says the railroads are earning only 23 per cent as much net operating income as in the three years ended June 30, 1917, in spite of the fact that the gross earnings are running about 50 per cent more than they averaged in those years.

The article points out that increased expenses devour the increased gross revenues. Total earnings in three months of 1916 were \$811,000,000, while in 1919 they were \$1,120,500,000, an increase of 38 per cent. However, operating expenses in 1916 were \$560,000,000 while in 1919 they were \$1,037,000,000, an increase of 85 per cent. In the first three months of 1916 the operating ratio was 69 per cent; in 1919, with passenger rates 50 per cent higher and freight rates close on 35 per cent higher, the ratio of operating expenses to total earnings was 93 per cent! Of course, it is disappointing but there is some hope in knowing that the new Congress will take the matter in hand.

It is reported that Director General Hines has called upon Mr. Paul M. Warburg to aid in formulating a plan under which the railroads are to be returned to their owners. Mr. Warburg's plan, announced some time ago, provided for a division of surplus earnings between the Government and the corporations after 6 per cent had been paid on the investment. It is surprising to note that those who sponsored Government control seem to be withdrawing their support merely because their administration has not succeeded. One thing is certain: if the roads are returned to their owners without provision for adequate rates we shall have another period of receiverships as in 1913-1917.

## Foreign Financing

In its May bulletin, the National City Bank says: "It will be to the lasting honor of America, crowning her achievements in the war with greater glory, if this country will go to the limit of her ability not only in providing food for the starving but in helping these stricken people to start their industries and get upon their feet again. . . . The situation in Europe is not an inviting one in the eyes of the individual investor. The destruction of wealth and man-power has been appalling, the countries are burdened with debts beyond any previous experience, and, most serious of all, the whole social and industrial organization has been unsettled to such an extent

that confidence in future policies and purposes is shaken."

Considerable publicity has been given of late to the subject of financing our friends and allies by means of the establishment of investment trusts in this country, such men as Mr. Paul M. Warburg and Mr. Leopold Fredrick having openly espoused the idea. For the inexperienced investor, the investment trust is a blessing. It is similar in function to the savings bank in that the risk, if any, is distributed over hundreds of different investments so that if one should be adversely affected, the greater proportion would be of sufficient value to offset any possible loss.

The investment trust engages men who are experts in security values and purchases such securities as its experts recommend. These securities are pledged with a trustee which permits the trust to issue obligations or certificates against the collateral held by the trustee. The investor buys a security which must be regarded as the quintessence of stability because of the able management such a trust must presumably have, because of the diversity of collateral behind the investment and because of the ready market afforded by reason of the eventually wide distribution of the securities. Several corporations have already been formed to conduct an investment business on this plan and the attention of the small investor is particularly directed to the possibilities in securities of this type.

## DOES MIGHT MAKE RIGHT?

(Continued from page 318)

right on China's side when China asked that those agreements be abrogated? Was it to be expected that the Council of Big Three would consent to confirm any such high-handed action of so militaristic a policy?

4. Was China not right when she declared that in going to war with Germany, all treaties between the two countries terminated, and that all German cessions and concessions passed automatically to China, and not by any known law or precedent to Japan or any other outside nation?

5. When the United States urged China to sever relations with Germany and later on to declare war, under the supposition, if not promise, that China would thereby reap great gains, did not a moral obligation henceforth rest on the United States, and especially on President Wilson, to render to China something more than professions of friendship?

6. Was it fair to China for the Big Three to allow Japan, all by herself, and as distinct from the Peace Conference or the League of Nations, to decide as to the way and the time to retrocede to China the territory of Kiao Chau, including Tsingtao?

7. Would it not have been nearer to pure right if all the powers, which had forcibly leased territory from China, had agreed to restore all such territory?

8. Is it exactly right to China, after presenting all her appeals or desires, to be granted nothing?

It may be said that Japan consents to "hand back the Shantung province in full sovereignty to China." I have never heard before that China had ever given up this sovereignty or that Japan had claimed it. This formal utterance is camouflage to make people think that China has gained something in the compromise. All that the Japanese claimed (and even that claim was wrong) was that German railway and mining concessionary rights had passed over to Japan, by "right of conquest."

## Millions of Prompt Payments

**S**INCE this House was founded in 1882, we have built up a clientele of tens of thousands of investors, in every state in the Union and many foreign lands, who look to us for trustworthy investments yielding a satisfactory rate of interest, backed by willing and thorough service.

During these 37 years, millions of payments of interest and principal on bonds safeguarded under the *Straus Plan* have been made through us, without loss and without delay. Every coupon has been cashed promptly. Every bond has been paid in cash on the day due. No bondholder has ever been asked to renew, or to wait for payment, or to deposit his bonds.

This record is due to our effective and scientific system of safeguards, known as the *Straus Plan*. Write today for our booklet, "Safety and 6%," describing our plan and the sound first mortgage 6% serial bonds we offer, in \$1,000 and \$500 amounts. Ask for

### ANNOUNCEMENT OF A SUMMER QUARTER

Instead of the usual Summer Session of six weeks, the University of Colorado will conduct, in the summer of 1919, a Summer Quarter of two terms, greatly increasing the scope and variety of courses. The First Term will open on June 30 and close on August 2. The Second Term will open on August 4 and close on September 6. Courses will be offered in Liberal Arts, Law, Medicine, Optometry, Engineering, Mountain Field Biology, and Vocational Subjects. A bulletin, soon to be issued, containing descriptions of courses and other information, may be obtained by addressing the Registrar.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. St. Mihiel and the Argonne. By Hamilton Holt.

1. What is the purpose of the first paragraph? What is the rhetorical name for such a paragraph?
2. Point out a sentence that indicates the plan of the entire article. What is the value of such a sentence?
3. Prove that the article rises to a point of especially high interest.
4. Show how the writer uses description as a means of increasing interest in narration.
5. Sum up the principal impressions St. Mihiel and the Argonne made on the writer.
6. Sum up the principal impressions the article makes on the reader.
7. Explain clearly why Americans are especially interested in St. Mihiel and the Argonne.

#### II. The Case of Japan vs. China. By Viscount Ishii and Gilbert Reid.

1. Imagine that you are judge at a debate at which the two articles are presented by opposing speakers. Give your decision and explain your reasons for making the decision as you do.
2. Write a properly numbered and lettered brief of each article.
3. Explain what methods of proof are employed in these articles.

#### III. Wonder What a Kaiser Thinks About.

1. Write a character sketch of the former Kaiser, basing all that you say upon suggestions conveyed in the "unauthentic interview."
2. Write a somewhat similar "unauthentic interview" with King Albert of Belgium, General Pershing, or Admiral Sims.

#### IV. When Everybody Flies. By Laurence La Tourette Driggs.

1. Point out examples of balanced sentences. What effects are gained by the use of balanced sentences?
2. Write an original short story in which you show some of the conditions that may exist in the future. Try to unite your story with the interests of your school.
3. Develop proof of the following statement: "Communication spells all the difference between modern times and ancient times."
4. Write contrasting paragraphs concerning Christopher Columbus and modern aviators.

#### V. The Peaceable, Timid Wolf. By William J. Long.

1. What is the principal point the writer makes? By what means does he endeavor to establish this point?
2. Show how the article combines exposition, narration, description and argument.
3. In the form of a contrast present the popular conception of a wolf and the writer's conception.
4. Write an original short story narrating the experiences of some man who endeavored, by actual experience, to prove or disprove Mr. Long's beliefs concerning wolves.
5. Explain how the narration makes use of the principle of suspense.

#### VI. Pioneering in Poetry. By Amy Lowell.

1. Explain the following: "A great artistic movement is as inevitable a thing as the growth of a race."
2. What is the meaning of the following sentence: "Literature is rooted to life?"
3. From various textbooks that you have studied in English draw illustrations in support of the sentence just mentioned.
4. Endeavor to explain and prove the following: "Poets are always the advance guard of literature; the advance guard of life."

#### VII. The Story of the Week.

1. Give a talk in which you summarize and explain recent events in connection with the Peace Congress.
2. Draw a blackboard map of the former Russian Empire. Give a talk in which you explain what is now taking place in various parts of Russia.
3. By means of a blackboard map explain the position and the importance of the islands of the Dodecanese.
4. Write a summarizing sentence for every important item in "The Story of the Week."
5. Imagine that you are captain of a small sailing vessel, and that you experienced unusual adventures in connection with the recent ocean-flights. Write your experiences for transmission to the daily press.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Congress and the President—"The Republican Congress and the Democratic President," "No, Mr. President," "The Story of the Week."

1. What are the most important items considered in the President's message to Congress?
2. On which of these subjects are the Republican Congress and the Democratic President in accord?
3. How would it be possible for "the two years of the present Congress to become a period of mere controversy and inaction"?
4. Outline that part of the President's message relating to labor.

#### II. Germany—Past and Future—"Wonder What a Kaiser Thinks About," "The Indeterminate Sentence of Germany."

1. What is the basis of the assertion: "Not a year ago crowns were quite the fashion"?
2. "I offered a lot of Austria to Italy once just before Italy got into the war." To what incident does this refer?
3. Who is the "Nicky" mentioned in this supposed interview? "Ferdie of Bulgaria"? "Tino of Greece"? "Willy of Wied"?
4. Why are the four men in the illustration called the "Big Four of Germany"? Can you name four men who may be said to have taken their places since the signing of the armistice?
5. Why do the German delegates at Paris object to signing the treaty? Does the logic of the editorial meet these objections?
6. What relation will the League of Nations bear to the future problems of Germany?

#### III. The Chinese Problem—"The Case of Japan vs. China."

1. Review the history of the "concessions" made by China previous to 1914.
2. What is the basis of the "new national spirit of the Chinese people" referred to by Mr. Reid?
3. Do you agree that "it would have been better for China if German interests in China had been left alone and not transferred to Japan"?
4. What are the terms of (a) the secret agreements made by the Allies with Japan, (b) the agreement made between Japan and China in 1915?

#### IV. Greece and the War—"The Twelve Islands."

1. Locate the Twelve Islands (Dodecanese) which are the subject of this news item.
2. What disposition was made of these islands in the Secret Treaty of 1915? Why does Italy now yield her claim to these islands?
3. What islands are at present a part of the kingdom of Greece? Under what circumstances were these islands added to the kingdom?
4. Review the history of the war between Italy and Turkey and of the Treaty of Lausanne? Do these events bear any relation to the present controversy?

#### V. The Russian Situation—"Making Allies of Enemies," "The Finnish Campaign," "Drive on Petrograd."

1. Who are the various men referred to in the first news item?
2. Why have the Finns and the Estonians united in the drive on Petrograd? Why are the Allies rendering them assistance?
3. Why is Admiral Kolchak opposed to the Allied recognition of the independence of Finland?
4. Is the Bolshevik power waxing or waning in Russia? What are your proofs?

#### VI. Problems of Transportation—"When Everybody Flies."

1. "Communication indeed spells all the difference between modern times and the dark ages of non-intercourse." Give some of the facts which prove this assertion.
2. What, according to the author, are some of the advantages which will come from commercial aviation?
3. "Its [aviation's] problems are slight as compared to those of the railroad and steamship in the first dozen years." Do you agree?
4. Why has the world watched the progress of the attempt of the "NO 4" with so much interest?

## Congress Goes to Work

THE Sixty-sixth Congress has buckled down to work in a manner that makes it evident that the Republicans who control it are out for a "record of achievement" to which to point in the 1920 presidential campaign.

The suffrage resolution, submitting the nineteenth amendment to the states for ratification, was approved by the House on the third day of its session by a vote of 304 to 89. Its consideration in the Senate was twice blocked by anti-suffrage senators from the South. The announcements by Senators Keys and Hale, Republicans, and Senator Hale, Democrat, that they will vote for the amendment, give 66 votes pledged in its favor, two more than the necessary two-thirds majority. Early approval of the resolution by the Senate is certain.

The House passed in fifty minutes and the Senate in three, the War Risk Deficiency bill, making provision for the payment of allotments to soldiers' dependents up to the end of the present fiscal year. President Wilson's cabled approval of the bill made possible the immediate mailing of 700,000 checks, totaling \$13,107,000 that had been held up at the War Risk Insurance Bureau since May 1 because of lack of funds.

Then began the consideration of the regular appropriation bills that failed at the last session of the Sixty-fifth Congress because of the Senate filibuster. These bills will be disposed of in record time, according to Republican leaders.

Secretary of the Navy Daniels surprised members of Congress, when hearings on the Naval Appropriation bill were begun, recommending that the three-year building program, calling for ten first class battleships, six battle cruisers, ten scout cruisers, and 130 smaller craft, which he so urgently requested in the last days of the Sixty-fifth Congress, be abandoned. He believed that the United States should show its faith in the League of Nations by authorizing no new battle ship construction at this time. All other nations represented at the Peace Conference were following this course, he said. He did recommend, however, that the uncom-

pleted portion of the last three-year building program be carried out. Republican leaders took the Secretary's action as confirming their belief that the huge naval program presented last December was never intended as anything more more than a paper navy. The new program was incorporated in the Naval bill, which passed the House but was held up by the Senate filibuster. That bill provided for suspending expenditures on the program should a League of Nations be created.

Secretary Daniels' recommendation was welcomed by the Republican majority, since it assists them in their policy of economy and retrenchment. They are becoming deeply concerned over the figures to which monthly expenditures by the Government are mounting. On May 1, \$2,226,000,000 of the Victory Loan already had been spent. The repeal of the so-called 10 per cent luxury taxes and the soft drink taxes will further cut into revenue returns. Large sales of securities by the Government will be necessary, Congressional leaders fear, if a deficit is to be avoided.

In this connection Progressives of the Senate under the leadership of Senator Borah made clear in terminating their fight against Senator Penrose's candidacy for chairman of the Senate Finance Committee, that it was not to the personality of Senator Penrose that they object, but to the principles of taxation for which he stands. If Senator Penrose's announced policy of reducing taxes on incomes and profits is made the policy of the Republican party, Senator Borah announced, the Progressives would be compelled to split away from the party, endangering its success at the polls in 1920.

Senate Progressives, altho defeated in their fight against Senator Penrose, are highly pleased with the committee appointments they won in the organization of the Senate. They believe that they now are in a favorable position to influence important reconstruction legislation. Senator Cummins became chairman of the Committee on Interstate Commerce; Senator Jones of Washington, chairman of the Committee on Commerce; Senator Kenyon, of the Committee on Education and Labor; Senator LaFollette, of the

Marcus in New York Times

You'll never get there in that thing

Committee on Manufactures, and Senator Gronna chairman of the Committee on Agriculture. In addition Senator Johnson was given a place on the Foreign Relations Committee, giving a majority in that committee against the League of Nations, and Senator Cummins was elect-president *pro tempore* of the Senate. These gains were possible, Progressive senators believe, only because they "held out" on Penrose.

The Sixty-sixth Congress received its first message from President Wilson, cabled from Paris, with mixed feelings. Its labor passages were called "socialistic" by some and by others they were looked upon as having been written by an "internationalist" rather than by a nationalist; but no one publicly disagreed with them.

Republican leaders answered its passages on woman suffrage, and on the return of the wires and the railroads to their private owners, by the statement that they intended to pass the suffrage resolution and to return the wires and the railroads regardless of any advice from the President.

The President's recommendation that war-time prohibition be repealed in so far as it affects wine and beer was unpopular with both houses. Canvasses of the House and Senate show that more than two-thirds of both houses would vote against any repeal measure. It is unlikely that the repealer will be forced to a record vote in either house.

Some of the President's opponents profest to see in the President's message an "announcement" that he would run for a third term. Senator New, Republican, of Indiana, gave expression to this idea when he said the President had made a bid in his message for the votes of the women, of labor and of the liquor interests, "an unique but powerful combination." Recent intimations from Paris that the President would not run for a third term were disquieting to Democratic politicians in Congress, who fear that no other Democratic candidate can win in 1920.

Interest in the Senate centers this week, and will center for many months to come, in the Treaty of Peace and the League of Nations covenant. However, debate upon the League and the treaty is not being allowed to interfere with the expeditious passage of appropriation measures. The present speed on these bills is not an end in itself. Republicans believe that the country will approve it, but the primary purpose is quickly to clear the way for action on the Republican program of legislation.

This program, thus far, has been outlined only very indefinitely. It includes passage of legislation for a budget system, special tariff legislation for the protection of the dye and allied chemical industries, to be followed by extensive hearings looking to a complete and upward revision of the tariff at the next session, the return of the wire and the railroad systems to their owners with special legislation for their protection, legislation for the placement of all discharged soldiers, sailors and marines on reclaimed lands and a possible revision and liberalization of the Sherman anti-trust laws.

## Proving the Eagle's Wings

THE United States Navy has set a new record for the world in making the first flight across the Atlantic—an elaborately prepared for and safeguarded flight, to be sure, with a week's rest halfway across at the Azores, but nevertheless an epoch-making feat in aviation. Only one of the three United States planes that started the flight was able to go on from the Azores. That was the NC-4, commanded by Lieutenant

Commander Albert C. Read and manned by a crew of five naval officers. It reached Lisbon on May 27, having left Trepassy Bay, Newfoundland, on May 16, and found the city *en fête* to celebrate the American reversal of the voyage of Columbus. From Lisbon it was planned to continue the flight to Plymouth, England, making in all a voyage of about 4000 miles. The actual flying time of the NC-4 in her 2150-mile flight from shore to shore was 26 hours and 41 minutes, cutting down to less than a quarter the transatlantic record made by the fastest ocean liner, the "Mauretania." The NC-4 maintained an average speed of 82 knots; the best that the "Mauretania" was capable of making was 24.04 knots.

While the NC planes were following their transatlantic course patrolled by United States destroyers every fifty miles and were in constant wireless communication with their bases, the world was waiting in suspense for news of Harry Hawker's attempt to cross the

and the rest of the world mourning them for dead, until on May 25 the ship swung close enough to the coast of Scotland for flags to give the message "Saved crew of Sopwith aeroplane."

Hawker and Grieves had flown 1225 miles before the accident to the radiator forced them down. "It was thru being too careful," said Hawker in describing the failure of his flight. "Given another machine tomorrow, I would try again."

## Hawker's Own Story

**W**E had very difficult ground to rise from on the other side. To get in the air at all we had to run diagonally across the course. Once we got away we climbed very well, but about ten minutes up we passed from firm, clear weather into fog.

Off the Newfoundland banks we got well over this fog, however, and, of course, at once lost sight of the

Harding in Brooklyn Daily Eagle

"The telegraph and telephone lines will of course be returned to their owners as soon as the transfer can be effected without administrative confusion"

sea. The sky was quite clear for the first four hours, when the visibility became very bad. Heavy cloud banks were encountered, and eventually we flew into a heavy storm with rain squalls.

At this time we were flying well above the clouds at a height of about 15,000 feet.

About five and one-half hours out, owing to the choking of the filter, the temperature of the water cooling out the engine started to rise, but after coming down several thousand feet we overcame this difficulty.

Everything went well for a few hours, when once again the circulation system became choked and the temperature of the water rose to the boiling point. We of course realized that until the pipe was cleared we could not rise higher without wasting motor power.

When we were about ten and one-half hours on our way the circulation system was still giving trouble, and we realized we could not go on using up our motor power.

Then it was we reached the fateful decision to play for safety. We changed our course and began to fly diagonally across the main shipping route for about two and a half hours, when, to our great relief, we sighted the Danish steamer which proved to be the tramp "Mary."

We at once sent up our Verey light distress signals. These were answered promptly, and then we flew on about two miles and landed in the water ahead of the steamer.

The sea was exceedingly rough, and despite the utmost efforts of the Danish crew it was one and a half hours before they succeeded in taking us off. It was only at a great risk to themselves, in fact, that they eventually succeeded in launching a small boat, owing to the heavy gale from the northeast which was raging.

It was found impossible to salve the machine, which, however, is most probably still afloat somewhere in the mid-Atlantic.

Altogether, before being picked up, we had been fourteen and a half hours out from Newfoundland. We were picked up at 8.30 (British summer time).

From Captain Duhn, of the "Mary," and his Danish crew we received the greatest kindness on our journey home. The ship carried no wireless, and it was not until we arrived off the Butt of Lewis that we were able to communicate with the authorities.

On climbing aboard we found that Captain Duhn spoke very good English. He had been afraid we should go down before his boat reached us.

"Another hour," he said, as we went on the bridge, "and you would have gone down."

He thought we were Americans, and we were struck by the casual manner in which he took the whole business, as if it were an every day affair to take airmen out of the Atlantic.

We immediately asked him his bearing and what likelihood there was of meeting a ship that day or the next, and of being in the main route of shipping.

At that time he thought there would be a very good chance of seeing a ship with wireless at any moment. That night the storm got worse and we had to heave to, only making about a knot in a northerly direction, thus taking us off the shipping route and lessening the chance of meeting another ship.

We slept, or tried to most of the time, drank tea, and read the captain's English books. We saw St. Kilda, but it was not until the Butt of Lewis was reached that we could communicate.

What we want to emphasize is that the fault was not due to the motor, which was in every way reliable, running satisfactorily from start to finish, even after boiling all the water away. The motor was still running merrily, tho red hot, when we alighted in the water.

Off Loch Eireholl we were met by the destroyer "Woolston" and conveyed to Scapa Flow, where we had a splendid welcome home from Admiral Freemantle and the men of the Grand Fleet.

## When the Bonds of Discipline Relax

**W**HAT the newspapers delight in calling a "crime wave" has followed every war as far back as police records are kept, and the question has recently been raised as to what may be expected after a war of the proportions of the Great War. The soldiers, suddenly released from the restraints of military discipline, and the whole population, relaxing from the high and patriotic tension of war time, tend to swing

"It's always fair weather" with Vice-President Marshall. Here he is cheering up the Democratic leader, Senator Martin of Virginia (right) with one of his famous jokes

*International Film*

Probably Senator Chamberlain of Oregon holds the record for faultfinding in the Senate. Altho a Democrat, he has spoken fearlessly and frequently against the mistakes of the administration, particularly in military matters. As chairman of the Committee on Military Affairs he introduced a bill repeating the charges made by former Judge Advocate General Ansell against the army system of courts-martial and asking for investigation of them and a reform

*International Film*

Senator Warren G. Harding of Ohio (left), often proposed as Presidential candidate, and Senator Reed Smoot of Utah. They are both Republicans

St. Louis Republic

An argument that critics often use to keep the world from moving forward

into forms of excesses which get them into trouble. Only last week the matter was given practical illustration in a case which has received a good deal of publicity in the New England papers. It was of a young man who marched away eighteen months ago to join the army. Last month he came back, with a clean army record, three service stripes on his sleeve, and the sense of having done the job he set out to do. Along with the other boys from his town he marched up the main street to the city square, where he read his name embossed on the Roll of Honor and where the whole town gathered to call him a hero.

That night he and some of his fellow soldiers went into a saloon to have a few drinks. They had too many and, on coming out, jumped into the saloonkeeper's car which stood at the door and went off on a joy ride. Shortly after the car ran into a telephone pole and was wrecked.

The boy was arrested, pleaded guilty, and was sentenced on three counts—using a car without the owner's consent, driving a car while intoxicated, operating a car without a license. He was given sixty days in jail and a fine and costs of over one hundred dollars. His bonus money on discharge and a week's pay which the Government owes him will almost pay the fine and costs, and the girl he is to marry will make up the difference. Indeed, friends who have taken up his case expect the Governor to pardon him.

But he has been in jail, he feels himself disgraced, and the high hopes of his homecoming from France

are so dashed that he has lost all ambition to start again.

This young fellow's case is one of many—some one has estimated that several thousand men in the uniform of the United States are in jails in various parts of the country. Letters have been sent to the governors, chiefs of police and others urging that all of them, if possible, be pardoned or released on parole before the Fourth of July, and that the officials interest themselves in trying to settle such cases out of court in the future. In the case described above, for example, friendly intervention would probably have induced the owner of the car to accept the money to repair it without having the soldier arrested.

As permanent help for such a situation it has been proposed to revive on a great scale the appointment of public defenders in the courts.

The public defender, whose duty is to defend accused persons just as the prosecuting attorney's is to prosecute them, has had a great success in the West. The movement has been halted by the war, yet there never was a time when the public defender's services were more needed.

Great numbers of young men have had a year or more of intensive training in fighting, in overcoming every obstacle, in driving automobiles at a speed limited only by the horse-power of their engines. They cannot settle down at once to the restraints of civil life; we cannot afford to let them readjust themselves thru the police courts.

## The Winnipeg General Strike

FOR two weeks the city of Winnipeg has been in the paralyzing grasp of a general strike. The trouble began with the efforts of the building trades' and metal workers' unions to reconstruct their relations with employers. But it rapidly spread to other classes of workers, until it involved even Government employees. The demands of the original strikers were for higher wages, shorter hours and more complete recognition of the unions. But apparently the issue soon shifted to the question of the right to the sympathetic strike. After a few days it is said that the employers in the trades first involved expressed their willingness to treat with their striking employees and to seek to come to some agreement with them. But the union leaders replied that it was then too late. The employers must yield all that the workers asked or the strike would not only go on but spread.

On the first day of the strike some 27,000 workers stopped work. Stores, restaurants, bakeries and dairies were involved, and subsequently the street car lines, telephone and telegraph offices, the post office and the fire department. It has been exceedingly difficult for the rest of the world to find out what is actually going on in Winnipeg, since the labor leaders would let no telegrams be sent from the city without their approval. But it appears that after a day or two the city employees, the workers in the light and power plants and the city water works, and the men in the newspaper offices all joined the strike. It was reported that practically all organized labor was on strike, the only unions whose members were at work being the moving picture operators, the musicians and the railway men.

Efforts were made by the city authorities and by the Minister of Labor in the central Government at Ottawa to bring the two sides in the controversy together, but without result. After ten days the strike movement began to spread to other parts of Canada. At Edmonton, Calgary, Brandon, Regina, and other smaller places general strikes actually began; while in other cities from Montreal to Vancouver similar action was threatened. It was reported that the organization of postal employees had decided to call a strike of all the postal workers from Sault Ste. Marie to the Pacific coast.

Last week the matter began in Winnipeg to take a political turn. What had started as a sympathetic strike in support of the contentions of certain workers with definite grievances gradually took the shape of general

dissatisfaction with living conditions. Excessive prices for food and great differences in food prices between Winnipeg and points across the line in the United States are said to be influencing many who are not union workers to join the movement. It is charged that plenty of food is coming into the city, but that it is being hoarded by dealers in the hope that great demands from Europe will raise prices to unheard of levels.

The assertion that a Soviet government had been set up in Winnipeg or was aimed at by the strikers has been indignantly denied by the union leaders.

## European Industry Is Paralyzed

FRANK A. VANDERLIP, of the National City Bank of New York, who has just returned from Europe, presented an alarming view of the situation to an audience of 1500 economists and financiers at a dinner in the Hotel Astor, New York, on May 26. He found in every country over there production paralyzed, finance in confusion, men idle, and machinery and materials lacking:

I believe it is possible that there may be let loose in Europe forces that will be more terribly destructive than have been the forces of the Great War. I believe we can probably save the situation from anything as fearful as that. If I did not believe it, I would hesitate to say what I shall about conditions. I do not believe in charity for Europe exactly—money charity—we have done a good deal of that, but I do believe in the charity of mind toward Europe. I am no longer critical of any fool thing that Europe does. They are entitled to do fool things. They are in a state of mind, they are in a nervous tension, they are shaken in morale, they are oppressed by the most harassing situations, and why should they not readily grasp for anything in this Peace Conference that would stanch their wounds? Let us be sympathetic with them.

In England there are 1,000,000 people living on unemployment allowances and in Belgium 800,000. Many have become demoralized by the war so as to be incapable of industrial efficiency. The population of Europe

"Come and get your dynamo" is the slogan of this booty dump in Belgium, where thousands of dynamos stolen by the Germans from French and Belgian factories and recovered by the Allies have been deposited awaiting identification by their rightful owners

has increased since the Napoleonic wars from 175,000,000 to 400,000,000 by means of the development of industries and foreign commerce. All this has now come to a stop.

The England that I saw the first of February was an England on the very verge of revolution. You did not get that over here, but it is a fact generally admitted by all Englishmen. When I arrived in London the streets were full of army lorries trying to carry the people because there were strikes on the District Railway and in the tube; the coal miners were threatening an immediate strike, and the supply of coal was so scarce that life there was most uncomfortable.

Up in Glasgow there were such riots that they had sent military tanks to patrol the streets. The railroad men were threatening a tie up of all transport service. The electricians were threatening to put London in absolute darkness, and all were provided with candles thruout the evening expecting the light any moment to be cut off.

Now, happily, there has been a great change in that situation. The great underlying common sense of the Englishman came to the rescue and differences were partly composed.

England has held the premier position in the international industrial markets. Now, how did she hold it? She had little raw material, some iron, and some coal; that was all. I will tell you how she held it. She held it by underpaying labor. That was her differential. That is how she competed. She underpaid labor, until today labor has not a house over its head in England, and the Government is undertaking to build a million houses for working men—a million houses!

English industry made a red ink overdraft on the future by underpaying labor so that it did not receive enough to live efficiently, and you know that in the mill towns of England there grew up a secondary race of small, underfed, uneducated, undeveloped people. Well, England has got to pay the overdraft now. She found that a third of her men of military age were unfit for military service.

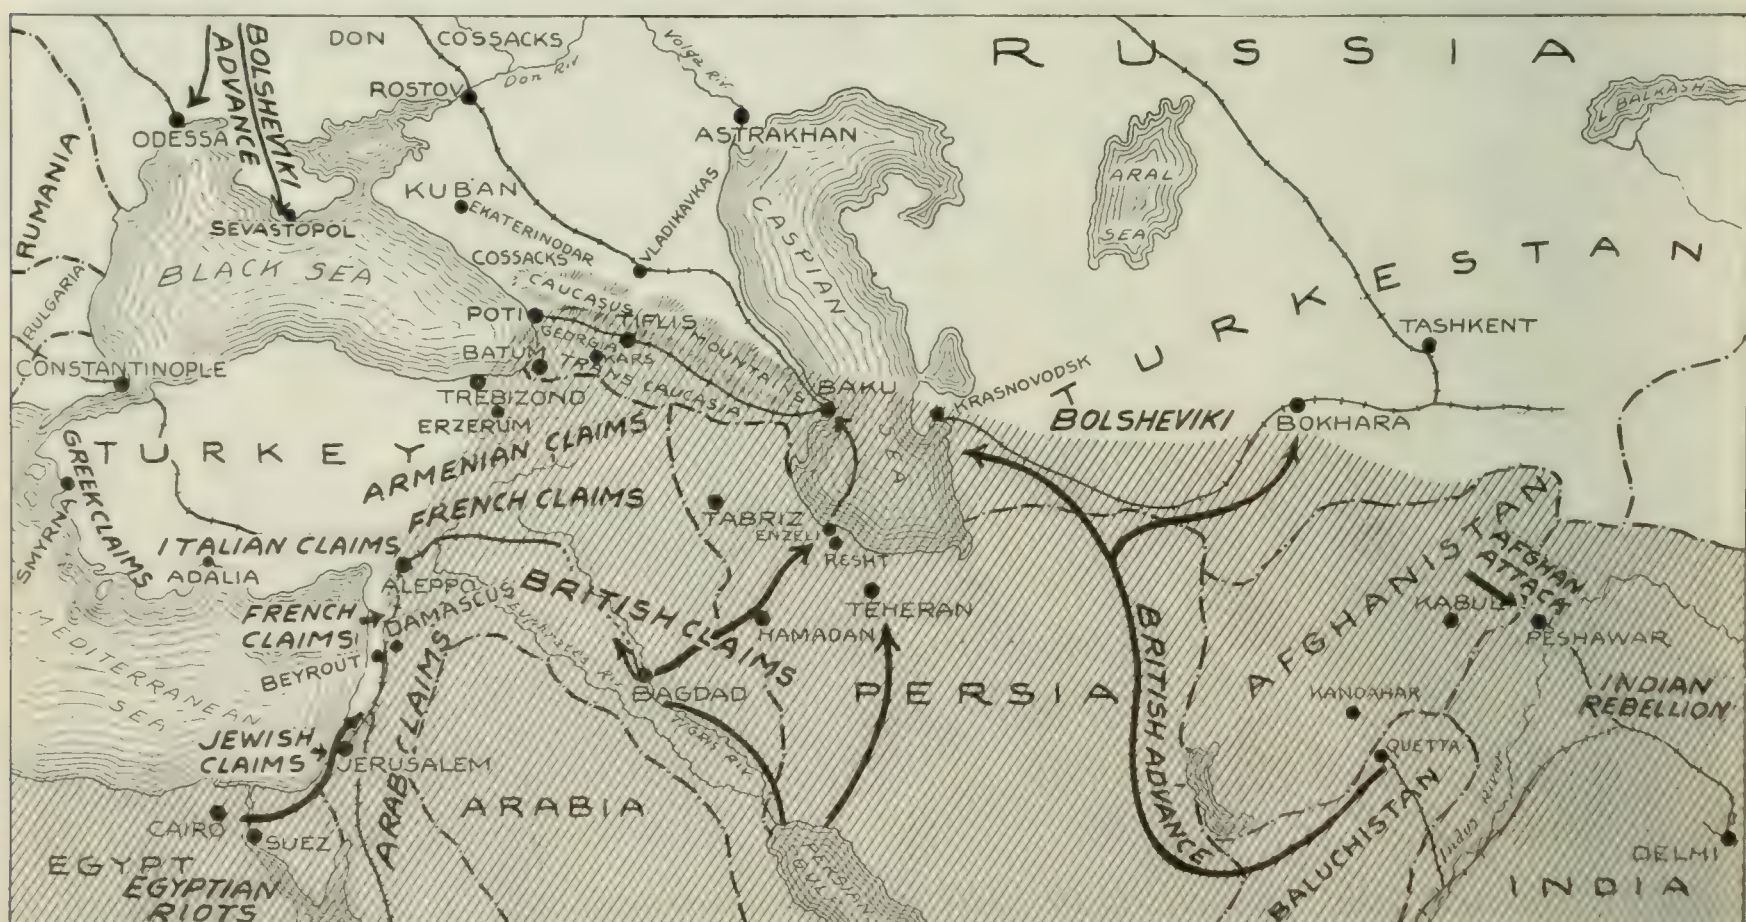

The war is still costing England \$32,500,000 a day since the armistice. France is crushed. Italy is in worse plight. Spain, tho prosperous, has in Barcelona the cancer of Bolshevism. France has expanded her paper currency from 5,000,000,000 francs to 36,000,000,000. Eng-

land has issued \$1,500,000,000 of currency notes, "practically fiat money." The Belgian Government was forced to redeem \$1,500,000,000 of the German marks with which the Germans had flooded the country. France has had to pay out \$1,000,000,000 for the German currency in Alsace-Lorraine. The Austrian crowns have only three-eighths of 1 per cent of gold behind them. And the Bolsheviki presses are turning out perfect counterfeits of British, French, Italian and German currency in order to destroy the value of all money.

We have got to do something about it. If we do not, it will do something about us. I do not believe that we can furnish the credit to rehabilitate the Governmental credits of Europe. Many of them are too badly involved already. I do believe that we must furnish those things that are essential to the re-starting of industry in Europe, and I believe that we must furnish those things to all Europe. It will not do to use the usual methods of money-lenders, pick out the best security and say we will take a chance on this and let the rest go. We have got to loan in the measure of the necessity rather than in the measure of the security, because there is no security anywhere as long as you will have part of Europe idle, in want and hunger, ready for Bolshevism, ready for some uprising, something that will better their condition, and I want to tell you that there is a minority in every country in Europe, an active minority, that believe in a program for the upsetting of social order.

## The Peace Negotiations at Versailles

WHILE preparing their complete and final reply to the peace terms presented to them, the German delegates at Versailles have been sending daily notes of protest against certain of the requirements. The most important of these was a sweeping remonstrance against the economic demands. In this Count von Brockdorff-Rantzau points out that Germany as an agricultural country could support only 40,000,000 inhabitants, and that it was only by the development of industries and commerce that she could raise her population to 67,000,000. In 1913 Germany imported 12,000,000 tons of foodstuffs and 15,000,000 persons were maintained thru foreign trade or were dependent upon

THE PARTITION OF THE NEAR EAST

The shaded area is the territory claimed before the war as the British "sphere of influence" or now occupied by British troops. The arrow-headed lines from the south show the main movements of the British forces. The French claim Syria and the southern part of Armenia. The Greeks claim Smyrna and the Dodecanese Islands adjacent. Italy, by the Pact of London, was promised a share of Turkey equal to that of England or France. The Jews have been promised a national home in Palestine. The King of the Hedjaz claims Damascus for the Arabs.

foreign raw material. According to the terms of peace Germany loses all her colonies, all her merchant ships for overseas trade, and all her foreign investments and securities, besides being obliged to build ships for the Allies and to pay overwhelming indemnities. The territorial cessions demanded of Germany would deprive her of the regions producing one-fifth of her grain and potatoes, three-fifths of her zinc, three-quarters of her mineral output, and one-third of her coal. Millions would need to emigrate, but they would be excluded from the most important countries. During the war 1,750,000 Germans were killed and a million more died from the famine imposed by the blockade. The note concludes:

We do not know, and indeed we doubt, whether the delegates of the allied and associated powers realize the inevitable consequences which will take place in Germany. An industrial state very thickly populated, closely bound up with the economic system of the world, and reduced to the obligation to import enormous quantities of raw material and foodstuffs, suddenly find herself pushed back to the phase of her development which would correspond to her economic conditions and the numbers of her population as they were half a century ago. Those who will sign this treaty will sign the death sentence of many millions of German men, women and children.

To this protest the council of the allied and associated powers returned a caustic and ironic reply, pointing out first that by reducing the territory of Germany they had relieved her of some 6,000,000 of her former population for which she will no longer have to provide. Germany is allowed to retain a considerable proportion of her smaller ships and, further,

it seems to have entirely escaped the notice of her spokesmen that the sacrifice of her larger shipping is the inevitable and necessary penalty imposed upon her for the ruthless campaign which, in defiance of all laws and precedent, she waged during the last two years of the war upon the mercantile shipping of the world.

As a partial offset against the twelve and three-fourths million tons of shipping sunk, it is proposed to transfer four million tons of German shipping. In other words, the shipping which it is proposed to take from Germany constitutes less than one-third of that which was thus wantonly destroyed. The universal shortage of merchant shipping is the result, not of the terms of peace, but of the action of Germany, and no surprise can reasonably be felt if she is called upon to bear a share—and it is a very moderate share—of a loss for which her own criminal deeds have been responsible.

As for zinc, phosphates, iron ore and other raw materials, Germany can import them like other countries having a shortage. "It would appear to be an economic fallacy that the political control of a country is essential in order to procure a reasonable share of its products."

But should not the coal situation be viewed from a different and wider standpoint? It cannot be forgotten that among the most wanton acts perpetrated by the German armies during the war was the almost complete destruc-

© Underwood & Underwood

The Kolchak government is established on a constitutional basis and is trying to bring about the regeneration of industrial conditions. Admiral Kolchak is the one authority in Russia to be recognized by the Allies. He has the support of the anti-Bolshevik elements throughout the country and he has led victorious armies against the Bolshevik forces.

tion by her of the coal supplies of Northern France. An entire industry was obliterated with a calculation and a savagery which it will take many years to repair. The result has been a grave and prolonged shortage of coal in Western Europe. There can be no reason in equity why the effect of this shortage should be borne exclusively by the allied nations who were its victims, or why Germany who deliberately made herself responsible for the deficiency, should not, to the full limit of her capacity, make it good.

Premier Clemenceau's reply further points out that "by the enforced reduction of her military armaments in the future" hundreds of thousands who have been engaged in training for armies or producing instruments of destruction will be available for peaceful voca-

tions. "No result should be more satisfactory to the German people."

But the first condition of any such recuperation would appear to be that Germany should recognize the facts of the present state of the world, which she has been mainly instrumental in creating, and realize that she cannot escape unscathed. The share which she is being called upon to bear of the enormous calamity that has befallen the world has been apportioned by the victorious powers, not to her deserts, but solely to her ability to bear it.

All the nations of Europe are suffering from losses and are bearing and will continue to bear burdens which are almost more than they can carry. These burdens and losses have been forced upon them by the aggression of Germany. It is right that Germany, which is responsible for the origin of these calamities, should make them good to the utmost of her capacity. Her hardship will arise not from the conditions of peace, but from the acts of those who provoked and prolonged the war. Those who were responsible for the war cannot escape its just consequences.

## The Troublous Stretch Between Constantinople and Calcutta

WE hear a great deal about Russia, however little we may know about it. But we neither hear nor know much about what has been going on in the region south of Russia. It seemed for a time that the plenipotentiaries at Paris might carry out their plans for the post mortem partition of the estate of the Sick Man of the East without outside interference, but suddenly we read of a Pan-Islam protest against the eviction of the Sultan and we perceive that the riots in Egypt and the rebellion in India are connected with Constantinople.

As may be seen from the map, the claims of the heirs to the Ottoman estate come into conflict. The various secret treaties conveyed the same real estate to divers powers, and now when they come to take possession there is trouble. France was promised a slice of Turkey extending from the Mediterranean to the Persian border, but this takes in the lower half of Armenia and cuts it off from the sea. Damascus is desired by the French, British, Arabs, Jews and Syrians. The Italians

in occupying Adalia are carrying out the program of the Pact of London, but the landing of Italian troops in Smyrna conflicts with Greek claims. The Persians and Afghans object to their territory being disposed of without their consent. The quarter from which we have heard least, and which we may therefore surmise to harbor the most significant events, is Afghanistan. Habib Ullah, the late Ameer, remained friendly toward the British in consideration of a substantial subsidy and a constant threat of intervention, so during his reign, from 1901 to 1919, there was comparative quiet along the northwest border of India. He turned a deaf ear to the call of the Calif for a Holy War, and dismissed the German emissaries who visited Kabul in 1915 to persuade him to raid the rich lowlands of the Indus, as his forefathers were accustomed to do. But on February 20 last he was assassinated, and within a month the Afghans had crossed the border at their old entrance, Khyber Pass, between Kabul and Peshawar. Both the manner and the motive of the murder are obscure, but it was reported that the late Ameer had gone on a hunting trip after grouse and was asleep in his tent, watched by four pages and surrounded by guards, when a pistol shot was heard and his brother, Nasr, and eldest son, Inayat, rushing into the tent, found him shot thru the head. Inayat Ullah Khan, it appears, resigned his claim upon the throne by right of primogeniture in favor of his uncle, Nasr Ullah Khan, but the latter failed to secure the prize, for a new claimant appeared, the son of the third and favorite of the seven wives of the late Ameer. This queen, Ulya Hazrat, is described as "a woman of ungovernable passions, wilful, domineering and capricious." Her son, Aman Ullah Khan, seems to have inherited his mother's character, for tho he is only twenty-seven years old he won over the army. He has imprisoned his uncle Nasr on a charge of instigating the assassination and has executed the colonel supposed to have committed the crime. Nasr was known to be anti-English. The attitude of Aman, the new Ameer, remains to be determined, but from the facts that he dispatched an emissary to Moscow to make an alliance with the Bolsheviki, and that eight battalions of Aghan regulars with cannon attacked the British outposts at Dakka, near Khyber Pass, on May 16, we may infer that he is unfriendly. The attacks were repulsed and the Afghan commander has asked for an armistice.

An unexplained complication of the situation is that the murdered Ameer at the time of his death was engaged in forming an alliance with the Khans of Russian Turkestan. This looks like a revival of the Pan-Turanian movement, but this time under British auspices instead of German. Russian Turkestan lies next to Afghanistan and Persia is coveted by both countries. A force of English and Indian troops was rushed to this region last winter from Quetta, conveyed across the Persian desert partly by camels and partly by Ford trucks, the new "ship of the desert." Arrived at Merv they took the Transcaspian railroad from the Bolsheviki with the aid of Mensheviki and Turcomans. But now the British have withdrawn from Turkestan and the Soviet committee in charge of the textile industries is rejoicing in getting a supply of cotton from Tashkent.

While the British on the border are being attacked by the Afghans they are further endangered by a rising in the rear. The Punjab is in a state that the Viceroy of India, Baron Chelmsford, does not hesitate to call "open rebellion." The plan drawn up by Lord Chelmsford and E. S. Montagu, Secretary for India, for the reform of the Indian administration by gradually enlarging the sphere of self-government, failed to meet the demands of the nationalist leaders. Passive

resistance soon passed into active, and the attempt to suppress the disorders by the Rowlatt acts fomented the feeling. Famine prepared the ground for the crop of violence and Bolsheviki sowed the seed. Hitherto the British have been able to rule India with a mere handful of men because of the racial and religious divisions, but now the Hindus and Mohammedans are uniting. Hindu agitators have even been invited to speak in the mosques, which they were formerly not allowed to enter. What is most serious, the Sikhs, whom the British have employed against both Hindus and Mohammedans and in foreign wars, are also disaffected. The Indian troops returning victorious from France were received at home by jeers instead of cheers. At Amritsar, which is to the Sikhs what Rome is to the Catholics, the city hall was burned down and the banks looted. Just before the war the capital of India was removed to Delhi because it was considered safer than Calcutta, but Delhi now is a center of sedition.

The Moslems of India, Persia, Egypt and Anatolia, perhaps also of Algeria and Morocco, threaten to revolt if the Calif loses Constantinople. In face of this threat the Allies are likely to revise their war aims and, instead of giving Constantinople to Russia as they had promised, they may allow the Sultan to remain.

## The Welfare of the Children

COMMISSIONS of distinguished foreigners, who come to this country to confer on army matters, on transportation, food, munitions, propaganda, almost every subject connected with the war, have followed close on one another's heels thruout the past two years. With the coming of peace it appears that these friendly visits, fruitful of understanding and of knitting up all the strands of coöperative action among allied peoples, are not to come to an end. But they are to take on an entirely new complexion. We are entertaining in the United States at the present moment ten of the most distinguished specialists in child welfare of Europe and Asia. They are Sir Arthur Newsholme, M.D., one of the world's authorities on vital statistics and a veteran champion of measures to improve the health of women and children; plucky little Eleanor Barton, of the Woman's Coöperative Guild of Great Britain, with a membership of more than thirty thousand working-class married women who know what they want and insist upon their Government's furnishing it; Dr. René Sand, of the University of Brussels; Dr. Clothilde Mulon, who had charge of the day nurseries established in the French munitions factories by the Government, and one of the ten women given the status of medical major of the second rank in the French army; Takayuki Namaye, representing the Japanese governmental department in charge of child welfare; Signor Fabio Frassetto, a professor of anthropology from Italy; Mlle. L. E. Carter, principal of a girls' school in Brussels; R. C. Davison, director of the juvenile labor exchanges in Great Britain; Sir Cyril Jackson, of the British Ministry of Labor; Dr. Radmila Lazarevitch Milochevitch, wife of the secretary of the Serbian Legation in Washington.

They are all official guests of the Government of the United States, by invitation of Miss Julia C. Lathrop, of the Federal Children's Bureau, warmly seconded by President Wilson. They have spent some time in Washington conferring with American experts and are to go in a body to nine American cities to hold regional conferences and to study our methods of child care.

These meetings are called Conferences on Child Welfare Standards, the attempt being to set standards

Photographed by U. S. Signal Corps

# This is the Life In Russia Now

So far has transportation broken down under the Bolshevik regime that some of these refugees have lived for months in the railroad station at Chollarinsk. Food is scarce, disease spreads unchecked, and often sporadic fighting makes it unsafe for civilians to venture into the streets

There are thousands of Russian peasants and Czechoslovaks living as refugees in freight cars and railroad stations thruout Russia who were trying to get out of the country when the Bolshevik government gained control and threw industrial and social conditions into disorder. Of course Pullmans were never overplentiful in Russia, but now there are only freight cars—and they seldom go. The line below shows a group of passengers from one car trying to get hot water in their tea kettles at a way station

Paul Thompson

which are practical at the present time for all countries. The standards are designed to give to all children a fair chance from before the time of birth (for they include pre natal care), so that society may be assured of a coming generation which is healthy, is educated to do useful work in the world, and is prepared, in turn, to become the fathers and mothers of the generations to come.

The standards agreed upon establish sixteen as the lowest age at which a child shall go to work in any occupation. The only exception to this is that children between fourteen and sixteen may be employed in agriculture and domestic service during vacation. Children between seven and eighteen should have nine months of school, either full or part time, each year. A child must have finished the eighth grade of school as well as reached his sixteenth birthday before he may be employed. If he gets a job when he is sixteen, education must be provided for him during the next two years at daytime continuation schools.

The working day for minors should never be longer than eight hours. For children between sixteen and eighteen the working day should be shorter than for adults. Minors should be paid at a rate which, for full-time employment, would yield at least the "necessary cost of proper living." They should not be employed at night or in hazardous occupations.

In order to protect mothers and babies, the standards declare that pre-natal care, trained attendance at child-birth, and adequate nursing and domestic assistance should be available for every mother regardless of her ability to pay for them. Prompt and complete birth registration should be required. More health centers should be established, and a public health nurse provided for every 2000 of the population.

For the school child there should be better school buildings, more recreation, and better care of health. For the adolescent, in school or out, there should be advice and instruction as to health needs and ample provision for wholesome recreation.

The state was held to be particularly responsible for the welfare of its defective, dependent and delinquent children, and for the supervision of institutions caring for them. Only as a last resort, the standards hold, should a child be removed from his own home. Juvenile courts, rural social service, and the appointment of state child welfare commissions were approved.

Full copies of the standards—and they are of interest to every parent—may be had on application to the Children's Bureau, Washington, D. C. Their purpose is to apply the most modern of methods to one of the oldest of problems—how to make a child healthy, wealthy and wise.

## Can We Explore the Sunken Continents?

**I**F ever you get to sighing that, since both poles have been reached and man has conquered the air, the romance of the unknown is dead, just remember that considerably more than two-thirds of our planet—73.39 per cent of it, to be exact—is still to be explored. To be sure this generous half portion is very, very wet, being covered by some consistently damp water, miles deep in spots, but it offers splendid rewards for the scientist, adventurer and treasure seeker.

Man has been described as an animal that lives at the bottom of an ocean of air. He moves freely about in his appointed kingdom, but if he rises 28,000 feet above it (the record flight is 31,000 feet made by Adjutant Casale, a French aviator) he must have oxygen tanks to keep the breath of life in his body; and yet a little higher and the wings of his fast flying airplane will find nothing on which to take hold.

Lack of air halts man's explorations of the interstellar spaces, but it is too much air that checks him when he would enlarge the bounds of his knowledge in the depths of the sea. And today he is as anxious to go down as he is to go up, for not only do the ocean deeps have the lure of the unknown, but the submarine has made of them a great treasure house.

According to an official statement of the United States Shipping Board the ships sent down by the German sea wolves total 21,404,193 tons. Even tho we have become used to talking and thinking in billions the \$3,000,000,000 represented by ships and cargoes is still a sum to move the imagination. Add to them the treasure that the sea has swallowed up since the first gold laden galleon put out and you form some idea of the material gain that awaits the one who will solve the problem of transporting man from the bottom of his ocean of air to the bottom of the ocean of

G. H. Davis Service

Here is a diving machine designed to carry several men, who would do their work without leaving the steel globe. The greatest danger a diver meets is of being blown up by the increasing pressure under water

water—and bringing him safe back again.

Drowning is the least of a diver's dangers. The greatest is being blown up. It is comparatively easy to keep water at bay by opposing it with air, but the deeper the diver goes the greater must be the pressure of air within his diving suit to balance the increasing pressure of the water without.

When the first of the East River tunnels was building, a party of engineers went on an inspection tour. They took with them light refreshments including ginger ale. When they opened a bottle in the air lock where compressed air was fighting back the river they noticed that there was no "fizz" to the drink. One of the men drank a bottle of the flat stuff. [Continued on page 374]

# The Senate Versus the People

An Editorial

By Hamilton Holt

**I**N 1890 the Senate of the United States passed the following resolution:

Resolved by the Senate (the House of Representatives concurring) that the President be and is hereby requested to invite, from time to time as fit occasions may arise, negotiations with any government with which the United States has or may have diplomatic relations, to the end that any differences or disputes arising between the two governments which can not be adjusted by diplomatic agency, may be referred to arbitration and be peaceably adjusted by such means.

This was the first time that a parliament of the world officially proposed that international differences be settled by peaceful means. It made a deep impression on men of good will everywhere. On the not unnatural assumption that the Senate would follow words with deeds, President Cleveland thru Secretary Olney negotiated a general treaty of arbitration with Great Britain, and on January 11, 1897, the Olney-Pauncefoot treaty was concluded and given to the world. Immediately public interest in both countries was aroused, meetings were held, and petitions began pouring in upon the Senate. Did the Senate ratify the treaty? It did not. The treaty was rejected on May 5, 1897, by a lack of three votes of the required two-thirds majority.

But the sentiment for arbitration was not killed, and in 1904 another attempt was made to put an arbitration treaty on the statute books—this time by President Roosevelt and Secretary Hay. Identical treaties with ten of our sister nations were negotiated, but the Senate, by a vote of more than five to one, substituted the word "treaty" for the word "agreement" in the preliminary special agreement or *compromis*, so that before a dispute could go to arbitration the Senate would decide whether or not it should give its consent. President Roosevelt thereupon in disgust withdrew the treaties and declined to submit them to the governments with which they were made.

In 1908-9, however, the Senate was prevailed upon to ratify a number of treaties of general arbitration. These were negotiated by Secretary Root and included agreements with France, England and Italy. But as the Senate was given the right to pass upon each *compromis* and as all questions of national honor and vital interests were excluded from arbitration, and as each nation could define as it saw fit national honor and vital interests, naturally these treaties amounted to little or nothing. I do not recall that a single dispute was ever decided under them.

**B**UT all the time the movement for the peaceful settlement of international disputes was waxing stronger and stronger. Finally, when Mr. Taft became President he made an address in New York at a dinner of the Peace and Arbitration League in which he said he did not see why *all* questions, even those involving national honor and vital interests, should not be arbitrated. This remark was instantly taken up by The Independent and other papers and individuals thruout the country, and in a few weeks it was a national slogan.

In 1912, Mr. Taft, thru Secretary Knox, negotiated two treaties of unlimited arbitration with England and France and laid them before the Senate. It was near the end of Mr. Taft's term of office and the Democrats were in full hue and cry against him, as the Republi-

cans are now against Mr. Wilson. Tho Mr. Taft stumped the country from Maine to California, the Senate was in its ugliest mood, and on a test amendment struck out, by a vote of 42 to 40, the third paragraph of Article III of the proposed treaty, which gave the Commission of Inquiry instead of the Senate power to decide when a question was justiciable. The vote was strictly on party lines, with the exception of the defection of six Republicans, four of them violent anti-Taft men and one of them the manager of the Roosevelt campaign. If one Senator had voted the other way the amendment would have been lost. After further amendments, which excluded the question of immigration, the southern bonds, and the Monroe Doctrine from arbitration, the Senate passed the emasculated treaty 76 to 3. But Mr. Taft was as disgusted as Mr. Roosevelt had been in 1904, and dropt the negotiations then and there.

The attitude of Senator Lodge during this period may be of interest today. He wrote the majority report of the Committee on Foreign Affairs favoring the amendments and made the principal speech against the treaties in the Senate. No other man, save possibly Mr. Roosevelt, accomplished so much for their defeat.

**N**OW the American people are again confronted with the question of whether a great peace treaty negotiated by their President is to be ratified by the Senate. The same old irrational attitude that confronted Presidents Cleveland, Roosevelt and Taft confronts President Wilson.

It is evident that Mr. Wilson has been mindful of the fate of his predecessors while working at Paris, for all the prerogatives of the Senate and even its prejudices have been scrupulously respected in the Covenant. The right to declare war is left to the various national governments and not to the League. The Monroe Doctrine is recognized as a part of international law, and all internal questions, including immigration, are specifically reserved to the national parliaments. When I saw the President at the Murat Palace in Paris he assured me that he would sign no document to which the Senate could reasonably object on constitutional grounds. What he would do if the Senate "unreasonably" objected he did not say, but I suspect he was ready for a fight. Nevertheless, despite the conciliatory tactics of Mr. Wilson, the rumblings from Capitol Hill grow louder.

Once more Senator Lodge appears as the protagonist. In 1912 he quoted with approval the principle laid down by Daniel Webster when he said that his politics "ceased at the water's edge," and yet the other day the chairman of the Committee on Foreign Relations of the Senate telegraphed to all the Republican Senators to keep quiet until a caucus could be held to decide what party action shall be taken.

When Senator Lodge held his debate with President Lowell on March 19, he made five suggestions for improvements of the Covenant, all of which were accepted by President Wilson and the Peace Conference. But now he says "the new form is distinctly worse than the old and more dangerous to the peace of the world and to American rights and interests."

Senator Knox says that "Congress cannot delegate to any five, nine or other number of representatives of foreign governments, powers that the people have delegated to them or reserved to themselves." And yet this

astute and experienced constitutional lawyer cannot point out a single instance in the Covenant where the sovereignty of any nation is impaired to the danger of itself or the world. Senator Knox is simply running amuck when he says America's entrance into the League would spell "national suicide."

Senator Wadsworth says that ex-Senator Root's suggested amendments have been "entirely disregarded," which is certainly far from the case, as was shown in *The Independent* of May 24. But even if true, it is hard to see what bearing such amendments had upon the merits of the specific articles of the Covenant. Any one can suggest improvements to the Covenant. But the Covenant is only what the assembled nations are ready to accept now. Shall we take it or leave it?

Senator Reed actually misrepresents the Covenant when he says it is "unamendable," that it "impairs the sovereignty of the republic and reduces us to a vassal state," and that "we must accept mandatories in Asia and Africa." Such statements can only be accounted for on the ground that he has never carefully read the Covenant, or if he has that he is incapable of understanding the English language.

Senator Borah asks "whether we shall delegate the power [to declare war] to a tribunal composed almost entirely of foreigners," when he cannot be ignorant of the fact that the Council [not Tribunal] has the power only to recommend when war is to be employed. But the Senator reaches the very nadir of ineptitude when he brings the Savior into the debate by saying that were Christ on earth and in favor of the Covenant, he, the Senator from Idaho, would not vote for it.

There can be no doubt where the American people stand on this issue. Over half of the state legislatures have passed resolutions favoring the League of Nations. Both political parties have planks in their platforms endorsing the idea. The Federal Council of Churches of Christ in America, the American Federation of Labor, the National Grange, and the Federation of Women's Clubs, and hosts of other national, state and local organizations are all on record in favor of the project. There is apparently no formidable opposition to the Covenant outside the United States Senate.

The issue then is clear and unequivocal. Will the Senate accept or defeat the greatest political document since the Declaration of Independence?

# The New Age

An Editorial

By Harold Howland

IT is trite to say that with the ending of the Great War comes the beginning of a new age. But it is true. The world will not be the same again.

It is true in the field of the relations of nation to nation. The world is determined that nothing like the Great War shall ever happen again. The nations are determined that the world shall be organized. They intend to make it impossible for any people to assault civilization as Germany did. The terms of the Great Peace are the proof of the world's determination that no people shall be permitted to put themselves above and outside the moral law and escape without paying the price.

It is no less true in the relations of man to man. Bolshevism is a proof of it. Bolshevism is but the sweep of the pendulum to the other end of the arc when the hold of Czarism was let go. Bolshevism is evil like Czarism because it is rooted in inequality. It proposes to substitute the tyranny of the workers for the tyranny of the idlers. It is a little less evil only because workers are better than idlers. But it is *evil*, for no tyranny is or ever can be good.

Bolshevism will not last. The very fiber of man's being is against it. The pendulum, shaken from the grip of Czarism, cannot be grasped and held fast by a workingman's oligarchy. Once loosed it will continue to swing. It will never reach either extreme point of its arc again. Midway of the arc lies justice.

None the less Bolshevism is a sign and a portent. It warns the world that the new age will not brook the exploitation of man by man. It demands a new statement of the relations of those who work and those who direct in industry. The formula proposed by Bolshevism is luridly wrong. But it lights up the error in the formula it seeks to replace.

It is not only Bolshevism that demonstrates that the basic problem of the new age is not political but industrial. In every country the forces of labor are making new demands for the fuller recognition of the rights of the workers. Everywhere enlightened employers and in-

telligent public leaders are giving their minds more and more to the problem of the readjustment of the relations of those in industry who supply the capital and the directive skill and those who provide the manual labor. Never before was labor so conscious of its solidarity. The consciousness is beginning to be shared by capital. It must be fully entered into and sympathized with by the whole people if the progress of the new age is to be steady and not spasmodic, constructive and not destructive, real and not illusory.

THE most striking demonstration of the new vision of the new age is the adoption by the representatives of thirty nations, assembled at Versailles, of a great charter of labor. Thru them the world has recognized the right of the workers to bargain collectively, to work but eight hours a day, to receive an adequate living wage, and to rest one day a week. It is not so long ago that the assertion of these rights was looked upon generally as arrogant presumption on the part of labor. If there were no other sign in the skies the international acceptance of these principles would be enough to mark the beginning of a new epoch in human affairs.

The task of the new age is to translate this new vision into actuality. The workers must be given a larger share in the control of industry and a larger proportion of the product of industry. The great charter of Versailles declares that the labor of a human being should not be treated as merchandise or an article of commerce. The workers are not sellers of the labor of their hands and brains. They are partners in the industry to which the labor of their hands and brains is indispensable.

Social and industrial justice must be the high goal of the age that is ushered in by the Great Peace. Where the nation, the people, the leaders in industry and the workers are wise and far-sighted, the road to the goal may be traveled in coöperation and orderliness. But blindness or self-seeking or arrogance may yet cover the path with wreckage and with suffering.

# Editorially Speaking

THERE is something uncanny about the continued criticism of the Y. M. C. A. for its work with the American army overseas. Every investigation that is made of the matter shows that the Y did splendid service. The latest report is made by a board of army officers acting under direction of the Secretary of War. The report has this to say:

The greatest source of criticism was the taking over of general canteen work. By this the Y assumed responsibility of gigantic proportions. Every organization of the A. E. F. then expected of the Y a service which would be difficult to maintain in the most excellently functioning department of the army.

Transportation was inadequate, military necessity did not permit transportation of military supplies, and the fighting man in the front lines did not receive the supplies which had been advertized and in a manner promised, and which he expected would be delivered. No such service was expected of other welfare organizations such as the Knights of Columbus, Salvation Army, Jewish Welfare Board and Red Cross, and these organizations have avoided this general source of harsh criticism.

There can be no doubt that the Y has done a great work in the A. E. F. and that time will eliminate much of the faultfinding which at one time was prevalent. The great majority of the Y personnel have been generous, sympathetic, hard working and self-sacrificing. It is evident that much fearless, untiring work was done among the front line troops. It is to be regretted that this splendid service has been overshadowed in part by criticism for which the personnel in general are in no way responsible.

The Y made mistakes and failed of achievement at times. But so did every other organization or agency, governmental or private, that had anything to do with the war, from the President down. None of them should be judged by its mistakes, but by its accomplishments, and by the balance between them. Such a judgment the Y need not fear.

The most recent lynching outbreak at Lamar, Missouri, permits none of the stock excuses to be offered in its defense. The victim was a white man; he had been convicted and sentenced to life imprisonment; his crime was murder and not rape; his victims were men, not women.

This lynching, like most of the others, is simply the expression of a spirit which is a mixture of lawlessness and savagery.

The only remedy for such offenses against law and order is more law vigorously applied. The states in which lynchings occur have shown that they are unable or unwilling to prevent the application of "mob justice." The nation must take the matter in hand.

A Federal law making it a felony, punishable with heavy penalties, to participate in the acts of any mob which took the law into its own hands would be a good thing to try. Such a law would be enforceable by Federal officers and Federal courts. It would be a powerful deterrent; for the members of lawless mobs are generally cowards.

Lynching is not a matter which concerns only the community in which it occurs. It concerns the entire nation. Respect for law and justice lies deep at the foundation of our institutions. Once let that go and chaos and dark night come on.

If a Federal law, federally enforced, to punish the flouting of the law by mobs violates states' rights, so much the worse for states' rights. The right of the people of the United States to abolish lawlessness from the land is unimpeachable.

The age of religious martyrdom has not gone. The transport "City of Marseilles" brought to the Murmansk coast a crew of Lascar firemen. It was the month of Ramazan, during which no Moslem may eat till the setting of the sun. But the sun did not set. The Lascars came up on deck as the sun dropt toward the horizon, but instead of disappearing it turned and rose again. After a few days some of the Lascars disobeyed the Koran and broke their fast, but seventeen of them were faithful unto death.

\*\*\*

No reform is more resented than spelling reform. It took a Bolshevik revolution to reform Russian and the Government of Denmark has been fighting fifty years to improve the orthography of the Danish language. At the last election in Denmark the Government lost ground on this issue, and when the reform bill came up in the Storting the vote was a tie, 63 to 63, but was carried by the vote of the presiding officer.

\*\*\*

Dr. Leonard Williams, a London physician, has pounded the theory that high collars are the cause of high tempers. He says he has noticed "that since women have given up tight collars and are wearing garments that give complete freedom to the neck they have become sweeter tempered." But are sailors the best humored and clergymen the most ill natured men in the world?

\*\*\*

When it was learned in England thru the calculated indiscretion of *The Times* that there had been serious riots in Delhi nine days before, members of Parliament accused the Government of concealing the news. The Secretary of State for India, Mr. Montagu, replied naively and conclusively that nobody had asked him if there had been riots in Delhi.

\*\*\*

New Year's Day will come before Christmas this year in Rumania, for the State has adopted the Gregorian calendar, while the Church still sticks to the Julian. For three hundred years the Eastern Church has been open to the taunt that it preferred to disagree with the solar system rather than to agree with the Pope.

\*\*\*

London kept Good Friday with crowded concerts of "Parsifal" music at Queen's Hall. Arthur Guy Empey and his "Treat 'Em Rough" crowd would not permit that in America. But evidently the British believe with Wesley that the devil should not be allowed to keep all the pretty tunes.

\*\*\*

Every country has its camouflage. It is the camouflage of the Americans to claim that they are doing wonders when they are merely muddling. It is the camouflage of the British to claim that they are muddling when they are accomplishing a particularly adroit piece of work.

\*\*\*

The Presbyterian General Assembly has postponed until 1920 action on the resolutions admitting women to full equality in church affairs. This gives a chance for the United States Senate to put the State ahead of the Church.

\*\*\*

The Covenant is the result of a compromise. If any nation were completely satisfied it would be a bad Covenant, for each nation wants things it should not get. Here is something for the Senate to remember.

# Why I Want to Get Back on the Farm

By a Wounded Soldier

Reported by Donald Wilhelm

**T**HE fellows that knew the farm all want to get back to it, and don't you believe anything to the contrary. I read an article in a magazine here in the hospital saying that after all the other wars the farm boys went off to the city, and it said a lot of the Canadian boys want to bolt now. Well, maybe they do. But every boy in our outfit wants to get back to the farm. But just saying that my opinion doesn't count at all, go ask the Federal Board of Vocational Guidance here in Washington. Some of them were out here getting our compensation matters fixed up for us. They said, "We want you to put in a claim for compensation, if you're entitled to it, so you can get more education." I talked to Mr. Woodley, who's head of the examiners in the Washington district, and he said there hasn't been 1 per cent of the hundreds of farm boys they've encountered that want to quit farming after seeing real service in France. He said he'd found a lot more boys who'd never seen a farm and want to start farming now than boys who want to quit the farm for the city.

Maybe the boys who didn't see real action got a different result, I don't know. I can't speak for them. But they got routine in plenty, didn't they? And they got a lot of discipline.

**T**HE routine in the service gets in on you. So does the discipline. But you don't mind the discipline as much as the routine. You get used to discipline, and it did a lot for me. But the routine makes you want to express your individuality. You want to get out and lay things out for yourself. That's another reason why all the fellows who had ever been on a farm want to get back to farming. Why, I used to get to wishing with all my soul that I could get ahold of an old French hoe and dig—if I could just dig in my own way a place that was my own.

There's a lot more to it than just wanting to break away from the routine, too. It's hard to explain to a fellow outside the army. But the ones inside get it—whether they realize it or not. Something that gives you the confidence to start all over when you get out. God knows we're glad enough to get out all right, and I guess it makes some of us sort of mad to hear 'em on the outside talk about the "good things" in war. But I can't blink the fact that I'm starting over new, and most of the fellows I know are starting over new, with something they didn't take to camp with them. Yes, I'm trying to explain, but it's kind of hard. Suppose I just tell you my story.

You see we didn't make a lot of money farming. Our

place was little and stony—they called it "Pebble Hill"—and my dad tried to help out with a little grain and feed store in town. A fellow named McGrew had the other grain store, and I can't remember anything but a feeling of being the small fry in the town. You see old McGrew started out with more than my dad. He was a Scotchman with a German wife—that's a combination that's hard to beat. So pretty soon old McGrew owned the elevator and half the town, and hard as my dad and my mother tried I had to leave Agricultural School my first Christmas there. Well, I'll tell you I was proud of my dad when the war came. You see I'm the only boy; and lots like me got exemption because their parents kept them at home on grounds they needed their support. Of course I love my mother, but I'm not any better to my mother than any boy to his mother, I guess. And my mother loves me, but many a mother loves her son as well as mine does—so why should I scheme around for exemption? When I asked my dad he said—"The Gibsons are going to be 100 per cent patriotic"—and he let me go. I didn't know all he meant by that then, but I did later, when dad's letters came.

Dad wrote the grain market had hysterics. Feed was scarce up in New England. The big companies had scouts out, offering all sorts of prices, any price you wanted, and old McGrew and his boy, who'd got out of service as being necessary at home, sure were there gathering the shekels and hoarding the grain while the snow was falling and the railroads were tied in a knot and not a thing was coming out of the West for New England. Dad said he couldn't see it that way. He said if they were having a grain famine in New England because of the Kaiser and the weather, it was no time to hoard your grain even if old McGrew was doing it. He said he was taking 6 per cent profit on the

sales and letting it go at that. And while the McGrews were hoarding and filling up their elevator and profiteering, my dad had mother helping him in the store part of every day while he was out doing his bit selling Liberty Bonds, which she was doing, too. You see, that's what he had in mind when he said 100 per cent patriotic.

It was no time at all before our major was making a speech to us on shipboard and telling us: "Boys, this war is going to make you or break you." And it was no time at all till we were over in France, where I was soon seeing what a farmer could do with an acre of land, some of which wasn't much better than Pebble Hill's.

The queer thing about the French people is the way they take a lot of time and spend a lot of money

Troops of the American First Division making an attack thru German gas on the Soissons front. One American already wounded has torn off his mask in his distress

# What Germany Escaped

By Edwin E. Slosson

**T**HE Germans opened the war using projectiles seventeen inches in diameter. They closed it using projectiles one one-hundred millionth of an inch in diameter. And the latter were more effective than the former. As the dimensions were reduced from molar to molecular the battle became more intense. For when the Big Bertha had shot its bolt, that was the end of it. Whoever it hit was hurt, but after that the steel fragments of the shell lay on the ground harmless and inert. The men in the dugouts could hear the shells whistle overhead without alarm. But the poison gas could penetrate where rifle ball could not. The malignant molecules seemed to search out their victims. They crept thru the crevices of the subterranean shelters. They hunted for the pinholes in the face masks. They lay in wait for days in the trenches for the soldiers' return as a cat watches at the hole of a mouse. The cannon ball could be seen and heard. The poison gas was invisible and inaudible, and sometimes even the chemical sense which nature has given man for his protection, the sense of smell, failed to give warning of the approach of the foe.

The smaller the matter that man can deal with the more he can get out of it. So long as man was dependent for power upon wind and water his working capacity was very limited. But as soon as he passed over the border line from physics into chemistry and learned how to use the molecule, his efficiency in work and warfare was multiplied manifold. The molecular bombardment of the piston by steam or the gases of combustion runs his engines and propels his cars. Cain, or whoever was the first man who wanted to kill another from a safe distance, took a stone in his hand and threw it by arm's strength. David added to his arm

the centrifugal force of a sling when he slew Goliath. The Romans improved on this by concentrating in a catapult the strength of a score of slaves and casting stone cannon balls to the top of the city wall. But finally man got closer to nature's secret and discovered that by loosing a swarm of gaseous molecules he could cast his projectile seventy-five miles and then by the same force burst it into flying fragments. There is no smaller projectile than the atom unless our belligerent chemists can find a way of using the electron stream of the cathode ray. But this so far has figured only in the pages of our scientific romancers and has not yet appeared on the battlefield. If, however, man could tap the reservoir of sub-atomic energy he need do no more work and would make no more war, for unlimited powers of construction and destruction would be at his command. The forces of the infinitesimal are infinite.

The reason why a gas is so active is because it is so egoistic. Psychologically interpreted, a gas consists of particles having the utmost aversion to one another. Each tries to get as far away from every other as it can. There is no cohesive force; no attractive impulse; nothing to draw them together except the all too feeble power of gravitation. The hotter they get the more they try to disperse and so the gas expands. The gas represents the extreme of individualism as steel represents the extreme of collectivism. The combination of the two works wonders. A hot gas in a steel cylinder is the most powerful agency known to mankind and by means of it he accomplishes his greatest achievements in peace or war time.

The projectile is thrown from the gun by the expansive force of the gases released from the powder and when it reaches its destination it is blown to pieces by

At the chlorine plant: The electric current passing thru salt water in these cells decomposes the salt water into caustic soda and chlorine gas. There were eight rooms like this in the Edgewood plant, capable of producing 200,000 pounds of chlorine a day.

the same force. This is the end of it if it is a shell of the old fashioned sort, for the gases of combustion mingle harmlessly with the air of which they are normal constituents. But if it is a poison gas shell each molecule as it is released goes off straight into the air with a speed twice that of the cannon ball and carries death with it. A man may be hit by a heavy piece of lead or iron and still survive, but an unweighable amount of lethal gas may be fatal to him.

Most of the novelties of the war were merely extensions of what was already known. To increase the caliber of a cannon from 38 to 42 centimeters or its range from 30 to 75 miles does indeed make necessary a decided change in tactics, but it is not comparable to the revolution effected by the introduction of new weapons of unprecedented power such as airplanes, submarines, tanks, high explosives or poison gas. If any army had been as well equipt with these in the beginning as all armies were at the end it might easily have won the war. That is to say, if the general staff of any of the powers had had the foresight and confidence to develop and practise these modes of warfare on a large scale in advance it would have been irresistible against an enemy unprepared to meet them. But no military genius appeared on either side with sufficient courage and imagination to work out such schemes in secret before trying them out on a small scale in the open. Consequently the enemy had fair warning and ample time to learn how to meet them and methods of defense developed concurrently with methods of attack. For instance, consider the motor fortresses to which Ludendorff ascribes his defeat. The British first sent out a few clumsy tanks against the German lines. Then they set about making a lot of stronger and livelier ones, but by the time these were ready the Germans had field guns to smash them and chain fences with concrete posts to stop them. On the other hand, if the Germans had followed up their advantage when they first set the cloud of chlorine floating over the battlefield of Ypres they might have won the war in the spring of 1915 instead of losing it in the fall of 1918. For the British were unprepared and unprotected against the silent death that swept down upon them on the 22nd of April, 1915. A deserter had come over from the German side a week before and told them that cylinders of poison gas had been laid in the front trenches, but no one believed him or paid any attention to his tale. War was then in the

Englishman's opinion a gentleman's game, the royal sport, and poison was prohibited by the Hague rules. But the Germans were not playing the game according to the rules, so the British soldiers were strangled in their own trenches and fell easy victims to the advancing foe. Within half an hour after the gas was turned on 80 per cent of the opposing troops were knocked out. The Canadians, with wet handkerchiefs over their faces, closed in to stop the gap, but if the Germans had been prepared for such a success they could have cleared the way to the coast. But after a few such trials the Germans stopped the use of free chlorine and began the preparation of more poisonous gases. In some way that may not be revealed till the secret history of the war is published, the British Intelligence Department obtained a copy of the lecture notes of the instructions to the German staff giving details of the new system of gas warfare to be started in December. Among the compounds named was phosgene, a gas so lethal that one part in ten thousand of air may be fatal. The antidote for it is hexamethylene tetramine. This is not something the soldier—or anybody else—is accustomed to carry around with him, but the British having had a chance to cram up in advance on the stolen lecture notes were ready with gas helmets soaked in the reagent with the long name. The Germans rejoiced when gas bombs took the place of bayonets because this was a field in which intelligence counted for more than brute force and in which therefore they expected to be supreme. As usual they were right in their major premise but wrong in their conclusion, owing to the egoism of their implicit minor premise. It does indeed give the advantage to skill and science, but the Germans were beaten at their own game, for by the end of the war the United States was able to turn out toxic

Eighteen steel tanks such as these were used at the Edgewood plant in the preparation of chlorpicrin, the most common of the poison gases. In these tanks the chemicals are mixed and the product is distilled over with steam to be used for filling shells

gases at a rate of 200 tons a day, while the output of Germany or England was only about 30 tons. A gas plant was started at Edgewood, Maryland, in November, 1917. By March it was filling shells and before the war put a stop to its activities in the fall it was producing 1,300,000 pounds of chlorine, 1,000,000 pounds of chlorpicrin, 1,300,000 pounds of phosgene and 700,000 pounds of mustard gas a month. The chief organizer of this enterprise was a Ph.D. from Göttingen University, Colonel W. H. Walker.

Chlorine, the first gas used, is unpleasantly familiar to every one who has en-

tered a chemical laboratory or who has smelled the breath of bleaching powder. It is a greenish-yellow gas made from common salt. The Germans employed it at Ypres by laying cylinders of the liquefied gas in the trenches, about a yard apart, and running a lead discharge pipe over the parapet. When the stop cocks are turned the gas streams out and since it is two and a half times as heavy as air it rolls over the ground like a noisome mist. It works best when the ground slopes gently down toward the enemy and when the wind blows in that direction at a rate between four and twelve miles an hour. But the wind, being strictly neutral, may change its direction without warning and then the gases turn back in their flight and attack their own side, something that rifle bullets have never been known to do.

Because free chlorine would not stay put and was dependent on the favor of the wind for its effect, it was later employed, not as an elemental gas, but in some volatile liquid that could be fired in a shell at any particular point far back of the front trenches.

The most commonly used of these compounds was phosgene, which, as the reader can see by inspection of its formula,  $\text{COCl}_2$ , consists of chlorine (Cl) combined with carbon monoxide (CO), the cause of deaths from illuminating gas. These two poisonous gases, chlorine and carbon monoxide, when mixt together, will not readily unite, but if a ray of sunlight falls upon the mixture they combine at once. For this reason John Davy, who discovered the compound over a hundred years ago, named it phosgene, that is, "produced by light." The same roots recur in hydrogen, so named because it is "produced from water," and phosphorus, because it is a "light-bearer."

In its modern manufacture the catalyzer or instigator of the combination is not sunlight but porous carbon. This is packed in iron boxes eight feet long, thru which the mixture of the two gases was forced. Carbon monoxide may be made by burning coke with a supply of air insufficient for complete combustion, but in order to get the pure gas necessary for the phosgene common air was not used, but instead pure oxygen extracted from it by a liquid air plant.

Phosgene is a gas that may be condensed easily to a liquid by cooling it down to 46 degrees Fahrenheit. A mixture of three-quarters chlorine with one-quarter phosgene has been found most effective. By itself phosgene has an inoffensive odor somewhat like green corn and so many fail to arouse apprehension until a toxic concentration is reached. But even small doses have

such an effect upon the heart action for days afterward that a slight exertion may prove fatal.

The compound manufactured in largest amount in America was chlorpicrin. This, like the others, is not so unfamiliar as it seems. As may be seen from its formula,  $\text{CCl}_3\text{NO}_2$ , it is formed by joining the nitric acid radical ( $\text{NO}_2$ ), found in all explosives, with the main part of chloroform ( $\text{HCCl}_3$ ). This is not quite so poisonous as phosgene, but it has the advantage that it causes nausea and vomiting. The soldier so affected is forced to take off his gas mask and then may fall victim to more toxic gases sent over simultaneously.

Chlorpicrin is a liquid and is commonly loaded in a shell or bomb with 20 per cent of tin chloride, which

produces dense white fumes that go thru gas masks. It is made from picric acid (trinitrophenol), one of the best known of the high explosives, by treatment with chlorine. The chlorine is obtained, as it is in the household, from common bleaching powder, or "chloride of lime." This is mixt with water to form a cream in a steel still 18 feet high and 8 feet in diameter. A solution of calcium picrate, that is, the lime salt of picric acid, is pumped in and as the reaction begins the mixture heats up and the chlorpicrin

distills over with the steam. When the distillate is condensed the chlorpicrin, being the heavier liquid, settles out under the layer of water and may be drawn off to fill the shells.

Much of what a student learns in the chemical laboratory he is apt to forget in later life if he does not follow it up. But there are two gases that he always remembers, chlorine and hydrogen sulfide. He is lucky if he has escaped being choked by the former or sickened by the latter. He can imagine what the effect would be if two offensive fumes could be combined. Now a combination something like this is the so-called mustard gas, which is not a gas and is not made from mustard. But it is easily gasified, and oil of mustard is about as near as Nature dare come to making such sinful stuff. It was first made by Guthrie, an Englishman, in 1860, and re-discovered by a German chemist, Victor Meyer, in 1886, but he found it so dangerous to work with that he abandoned the investigation. Nobody else cared to take it up, for nobody could see any use for it. So it remained in innocuous desuetude a mere name in "Beilstein's Dictionary," together with the thousands of other organic compounds that have been invented and never utilized. But on July 12, 1917, the British holding the line at Ypres were besprinkled [Continued on page 381]

Guthrie Service

Here is every type of gas mask used by America, the Allies or Germany during the war. In the top row are the American masks, chronologically, from left to right: U. S. Navy mask (obsolete), U. S. Navy mask (final type), U. S. Army box respirator (used thruout the war), U. S. R. F. K. respirator, U. S. A. T. respirator (an all-rubber mask), U. S. K. T. respirator (a sewed fabric mask) and U. S. "Model 1919," ready for production when the armistice was signed. In the middle row, left to right, are: British veil (the original emergency mask used in April, 1915), British P. H. helmet (the next emergency mask), British box respirator (standard British army type), French M2 mask (original type), French Tissot artillery mask, and French A. R. S. mask (most recent type). In the front row: the latest German mask, the Russian mask, Italian mask, British motor corps mask, U. S. rear area emergency respirator, and U. S. Connell mask

# Hitch Your Wagon to a Gas Bag

## The Next Step in Transportation

By Austin C. Lescarbours

**R**IDING without a jar yet enjoying every convenience of the Pullman car, eating meals without constant fear of *mal de mer*, and sleeping without the disturbing factors which characterize travel aboard train or steamer, the traveler of the future will make the voyage between New York and London in two days. If weather conditions are not what they should be, the journey will require a half day more. At any rate, the huge aerial greyhounds, in the form of dirigibles measuring over four city blocks in length and almost ten floors in height, will insure rapid travel between America and Europe under all weather conditions thruout the year.

Far from being the dream of Jules Verne or an excerpt from the highly imaginative writings of H. G. Wells, this trans-Atlantic service is an immediate possibility. In fact, a British firm of world-wide standing, whose name is identified with anything from a hand-grenade to a battleship, has decided to inaugurate a network of aerial lines from the British Isles to every important point. Thus New York, Cairo, Perth, Calcutta, Cape Town, and other centers will be brought to within easy reach of London. While days will be saved in the case of the New York-London service, weeks will be saved in the longer Perth, Cape Town, or Calcutta service.

The dirigibles planned are to be about 800 feet long and over 100 feet in diameter. They will be provided with a number of engines totaling somewhere between 3000 and 3600 horse power. The passenger carrying capacity will be about 150 passengers, allowing for a liberal baggage privilege for each traveler. Or the passenger carrying capacity may be reduced to fifty, thus enabling some ten tons of mail or light merchandise to be carried at a moderate rate. And with all the costs carefully figured out, including a certain rate of interest for the investment and a fair sinking fund, the promoters of this aerial service assure us that the London-New York journey will not exceed \$250 a head!

But is the dirigible safe? What of the many Zeppelins which have met a tragic end? Why take the risks of aerial travel? These are but a few of the many similar questions which greet every announcement of the coming aerial greyhounds.

An airship is as safe as a passenger train. Accidents may happen to a dirigible; but they may—and frequently do—happen to a railroad

coach. Take the British official statistics. We learn that only one airship has been lost in Great Britain owing to conflagration in the air, altho 83,360 hours have been flown and over 2,500,000 miles covered during the war! In the case referred to the flight was an experiment with a new type of airship, and the cause has since been ascertained and eliminated.

An airship can remain aloft while engine repairs are effected; she always remains on an even keel, and there is, therefore, no danger in flying at night or in fog or cloud; while the great lifting power permits of much more comfortable accommodation than one ever dreamed of. There is plenty of room to move about. The fact that the envelope is filled with an inflammable gas need cause no misgivings as to safety, for Great Britain, during the war, operated thousands of automobiles by means of coal gas stored in inflated balloons, which in no case caught fire from the engine. And every precaution is taken to prevent conflagration of the hydrogen gas aboard the modern dirigible.

However safe hydrogen gas bags may be made, there is no further need for hydrogen. One of our American contributions toward military aviation has been the commercial production of noninflammable helium gas, which can be used in place of hydrogen and which once and for all eliminates all danger of fire. Helium lifts about 65 pounds per thousand cubic feet, as against 70

pounds lifted by commercial hydrogen. In the instance of huge balloons containing millions of cubic feet of gas, this difference in lift is negligible when the absolute safety of helium is considered.

The rigid type airship is structurally a sound vehicle. Equipt with the powerful yet light-weight gasoline engines of the present, a dirigible will be able to buck the strongest winds, and to make a safe landing despite all surface disturbances.

The docking facilities of the aerial greyhounds are to be of the simplest yet most effective kind. The nose of the dirigible will be attached to the swivel top of a tall mooring tower, thru which elevators will operate to carry passengers to and from the dirigible. There will be a gang-plank from the revolving mooring tower top to the nose of the dirigible, whence a long corridor will lead along the bottom of the gas bag to several elevators which will take passengers up to the top of the gas bag to the passenger accommodations. The mooring tower will be 500 or more feet high, in order that the dirigible may ride safely thru

any wind storm. Already an airship has been moored out successfully for six weeks in a perfectly open expanse to a specially designed mast. Only two or three men are required to look after the ship, and winds of up to fifty-two miles an hour have been ridden without any damage whatever. There seems little doubt, therefore, that this system of mooring would enable an airship to live out in the open for many months at a time; and the old cry about the tremendous expense of handling and sheltering dirigibles is no longer based on facts as they exist.

For years we have been in the habit of deriding Germany's Zeppelin attempts. Every time one of the huge pencil-shaped dirigibles came to an untimely end, there was a chorus of "I told you so's" from all parts of the world. How could such a huge, ungainly, highly inflammable craft be practicable! A Zeppelin cost as much money as fifty first class airplanes. And airplanes were so much more efficient!

But old Count von Zeppelin kept on plodding year after year, turning out one Zeppelin after another. When his money gave out, because of the mishaps to his earlier airships which had consumed all his financial means, he turned to the German Government for aid—and got it. From that time to the outbreak of the Great War, and all during the world-wide struggle until almost the very end, his workshops continued to turn out Zeppelins. Many were destroyed in ordinary handling, and many more by enemy weapons. In fact, as a military weapon the Zeppelin was soon admitted a failure; and toward the final months of the war these dirigibles were no longer being built.

But why did Germany keep faith with the Zeppelin airship despite so many seemingly indicative failures? For the simple reason that for once Germany was far-sighted. She had seen enough of the dirigible to know

that it was the ultimate type of aerial carrier. True, she made a mistake in her military application of the Zeppelin; but she more than made good in the naval use of the same dirigible. Some day, when the story comes to be written in full, we may learn that on more than one occasion, and certainly at the big battle of Skagerrak, two or more Zeppelins served to protect the German fleet from the preponderant British Grand Fleet, by superior scouting.

GERMANY realized the long-range possibilities of Zeppelins. Take one concrete example. In November, 1917, the Zeppelin "L-59" flew from Bulgaria to Khartoum in Egypt, and back again, without touching land, a total distance of 7300 kilometers or something like 4600 miles, surpassing easily the crossing of the Atlantic. The object was to carry supplies to the German forces in Africa; but when the Zeppelin received word by wireless that the German forces had surrendered, it turned back with its cargo. What better proof would the Germans, or any one else, wish of the commercial possibilities of the dirigible? And didn't the Germans operate regular passenger carrying Zeppelins along the Rhine just previous to the war, without a single accident, for a long period?

The plain truth is that the dirigible has been shelved in favor of the airplane in practically every country outside of Germany. It has been looked upon as crude, lumbering, slow, unsafe—indeed, one runs out of discreditable adjectives—and a very poor second to the airplane. Yet all the while it has been gaining favor during the war, no matter what may have been the universal opinion. The development of rigid airships has been even more rapid than that of airplanes. In 1914 the average endurance of a German rigid dirigible at cruising speed was under [Continued on page 377]

## Here Are the Motor Trails from Atlanta

By A.

Field Representative of the American Automobile Association  
and Director of Transcontinental Highway

EVERYBODY with any kind of car, be it of recent or ever so ancient vintage, is planning to enjoy this summer out-of-doors. Restriction of motor car production, the necessity of checking the consumption of gasoline for pleasure uses as well as the natural patriotic desire to economize on strictly pleasure expenditures during the stress of war times, all tended to reduce motor car touring to a minimum during the last two seasons. However, now that the war is over, a reaction has set in and to judge by present indications our citizens intend fully to make up for past restraint and to make this the banner touring year in the history of motordom.

One of the most remarkable features of this revival of pleasure motoring is the fact that such a large percentage of motorists plan long distance and consequently time-consuming tours. If all the cars that were put thru their paces on a trip across the continent for the last five years were lined up, the row would fall short of matching in length the line of cars that will this year form a regular procession on any one of the three or four main transcontinental motor routes. But of the owners of the more than five million passenger motor cars in the United States the greater number, of course, will have to content themselves with shorter trips of anywhere from a few days' to a few weeks' duration. It is safe to predict that some sort of an outing trip is being planned by 90 per cent of the total number. A painstaking statistician would be able to figure out the probable number of hundreds of millions of dollars this vast army of touring motorists will spend along its routes. I am not a painstaking statistician, but am guessing that it will be more than a billion dollars, and I believe this a safe and conservative estimate.

The people of the cities of the East will flock to the White Mountains and the lakes of New Hampshire, the Green Mountains of Vermont, the woods of Maine, the New England seashore, the Adirondacks or Lake Champlain country, the Catskills, the Sullivan County hills or the famous finger lake country of central New York, the Pocono Mountains in Pennsylvania, the Berkshires of Massachusetts, the Litchfield hills of Connecticut or probably to the New Jersey or Long Island shores. Indeed there are plenty of cool and charming places near at hand.

The people of the South and the eastern part of the Middle West will also head for some of these same places in order to escape the heat of the level regions, while the citizens of the prairie states, west of the Missouri River, will pack their families and camping equipment on flivvers or five thousand dollar cars, or cars of all grades between, and hie themselves to the Rocky Mountains of Colorado or northern New Mexico, or perchance join the long caravan of motor cars heading for our wonderful chain of national parks, the nation's choicest playgrounds.

There are seventeen of these vast public recreation grounds, but the following eight

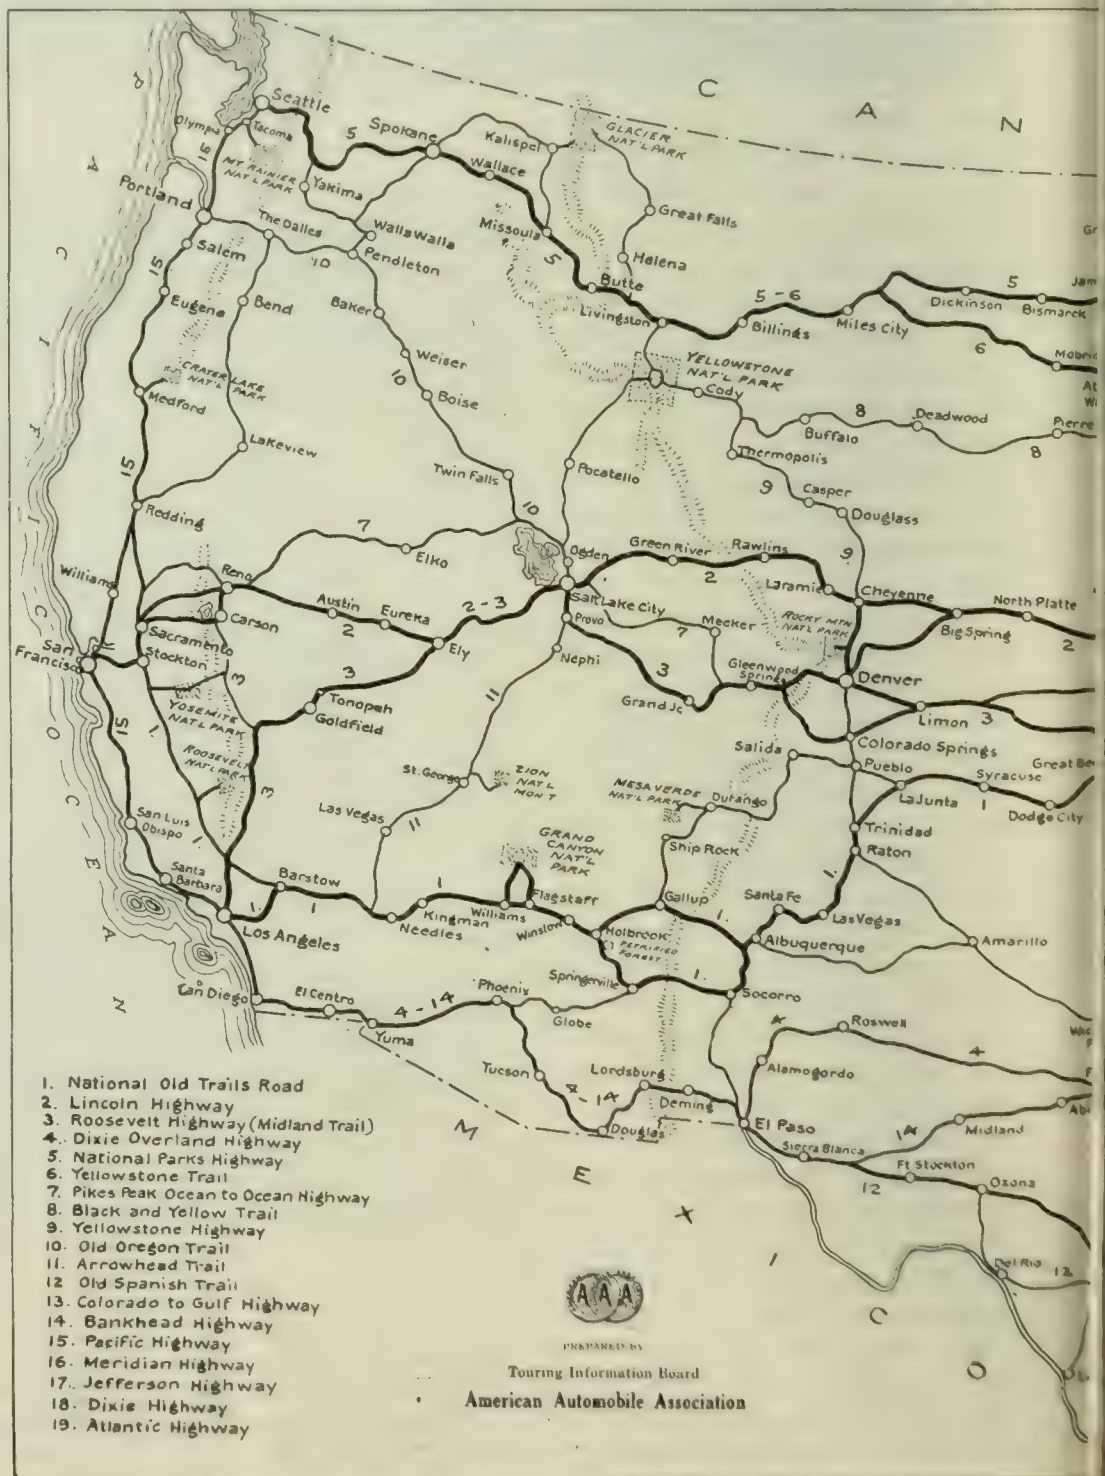

offer the greatest attractions, each containing features quite different from the others:

Rocky Mountain National Park, seventy miles from Denver and the most accessible of all the national parks of the West, located in the heart of the Rockies, with fifty-one peaks more than ten thousand feet high and remarkable records of the glacial period.

Yellowstone National Park, with more geysers than all the rest of the world, mud volcanoes and petrified forests, wonderful lakes and waterfalls and the greatest wild bird and animal preserve in the world.

Glacier National Park, with lakes and ice glaciers, not surpassed by the Alps of Europe; two hundred and fifty glacier-fed lakes and sixty glaciers; a sensational massing of extraordinary scenic elements.

Mount Rainier National Park, a splendid snow capped and flower bedecked mountain. The largest single peak glacier system with twenty-eight glaciers.

# to Pacific—and All Points Between

gard

obile Association, Vice-President  
the National Highways Association

Crater Lake National Park, a blue gem like the rarest jewel. No visible inlet or outlet. Sides a thousand feet high. "A poem in grays and greens and unbelievable blues."

Yosemite National Park, with the highest waterfall and the oldest and biggest trees in the world, and an indescribable charm all its own.

The Grand Canyon of Arizona, the most stupendous chasm on earth. "By far the most sublime of all earthly spectacles." John Muir says: "A wildness so Godful, cosmic and primeval bestows a new sense of earth's beauty and size."

Mesa Verde National Park, with well preserved ruins of a prehistoric civilization, probably ancient when the Pharaohs built the pyramids.

Besides the thousands of Easterners who will motor to these parks in the Rockies, the Cascades and the Sierra Nevadas of the West, a horde will flock there

from the hot plains of Texas, Oklahoma, Kansas, Nebraska and the Dakotas on vacation trips of a few weeks' length, the altitude of these mountain regions offering a welcome relief from the torrid heat of the corn and wheat belts where even the breezes often are as hot as blasts from a fiery furnace.

Between the Rocky Mountains and the West-coast mountain ranges of the Cascades and Sierra Nevadas lies a relatively arid territory called the Intermountain region. This more or less desert-like section varies from two to six hundred miles in width and must be crost in order to reach the Pacific coast.

The good roads movement in the United States, which now has received such a tremendous impetus in unison with and as an inevitable consequence of the growth of the motor car industry, has brought about the building of good roads thru heretofore untravelable mountain passes and has caused the establishment of standard routes across the arid intermountain region with consequent improvements that make the transit thru it comparatively easy and free from danger.

Having made eighteen trips on rubber tires across the United States east and west and more than that,

north and south, and having pioneered all of the present transcontinental standard routes, besides watching their later development, I give below a brief summary of the main features of some of the most important of them. Maps and digests of essential information of all the cross-country routes are prepared by the American Automobile Association and available at its national touring bureaus in Washington and New York.

**T**HE National Old Trails Road gets its name from following old historic trails, more or less closely, all the way across the continent. Thus it follows the National Pike, the first highway built by the nation, along a route reminiscent of the history of Washington, Braddock and of the French and Indian wars, from Washington or Baltimore to St. Louis via Cumberland, Wheeling, Columbus and Indianapolis. From St. Louis it follows the Boone Lick Road, named after the doughty Daniel Boone, to Kansas City. From Kansas City to Santa Fé it traces the famous Santa Fé trail, gory with the blood of the pioneer hunters, trappers and traders who between 1882 and 1872, when the completed railroad caused its abandonment, plodded their weary way across the plains and so often met death at the hands of marauding savages. From Santa Fé to California it trails the paths of Spanish conquistadores and the indomitable padres, who brought the gospel to the Pueblos. The length of this route is three thousand and thirty miles from Washington to Los Angeles. Everything considered, it is the most scenic and by far the most historic route, besides offering the flavor of a trip into a foreign land on account of the Mexican population and numerous interesting tribes of Indians who in New Mexico and Arizona dwell contiguous [Continued on page 379]

# Wake Up Americans

By Edward Earle Purinton

**T**HE war is not over. Instead, a new war is upon us. We didn't see it coming. Many of us don't know it's here. And we are all as unprepared for it as we were for the grapple of the Huns.

The new war may last ten years. It will if we don't wake up. Our immediate job is to arm ourselves, put up a finish fight, and knock out the enemy before he gets the start.

When the Kaiser attacked Europe, we did nothing. We were asleep as a nation, and it took us three years to wake up. Our slumber of indifference cost us heavily; it cost Great Britain, France and Italy more.

The new war, growing out of the war in Europe and now transplanted in America, is to be a fight not of soldiers but of workers. If allowed to spread, it will mean danger to every man or woman who works for a living—and there are 30,000,000 of us in this country. We are all liable to lose money, time, health, opportunity.

This new war in America, if it succeeds, will make the rich richer and the poor poorer. It will raise the cost of living even more, and reduce wages to a minimum. It will paralyze industry, cause the discharge of thousands of employees, prevent the hiring of thousands who want a job, and create disorder if not panic.

The war in Europe was between *races*—and we knew just by looking at a Hun or a Turk that he was our foe. The new war in America is between *classes*—and we don't know how to judge the army of attack. We are fooled in their appearance. They don't look like soldiers, they look more like tramps. They include Bolsheviki; I. W. W. orators, Germans, pro-Germans and near-Germans; anarchists and socialists; grafters and profiteers; drones and failures; kickers and pessimists; idlers and men who talk instead of work; reformers drunk on a theory; fanatics who must be heard at any cost; foreigners who like our money but not our flag. These gentry form the army of attack. They are led by foreign brains and presumably fed on foreign money.

They call their new scheme a "war between Capital and Labor." They sprung it as far back as 1917; it was the largest single factor in the 8000 strikes which were organized during that year in the shops, mills, factories, and other producing concerns of the United States.

The mayors of a hundred of our largest cities were called to the White House in company with the governors of states, to consider the various labor problems of the reconstruction period, and to devise ways of "steadyding, easing and facilitating the whole labor processes of the United States." One of their findings was that "a desperate Bolshevik propaganda is actively at work to aggravate the unemployment situation."

By fostering the conditions of labor unrest, these

Memphis Commercial Appeal

The monster menace of revolutionary unrest: "There are more than 12,000 centers of Bolshevik agitation in the United States"

hidden traitors plan to hurry along the revolution against the American Government and to establish a Bolshevik republic. A high official of the Post Office Department states that such a revolution is planned by the "red" leaders in this country, who already publish twelve newspapers and a large number of free lance papers, and who conduct propaganda regularly and widely thru anarchistic, socialistic and other radical organizations, particularly the I. W. W. and their great field force known as "recruiting and subscription agents." There are more than 12,000 centers of

Bolshevist agitation in America.

Almost every large body of employees has in it a group of these lawless flingers of firebrands, these haters of America and everything American, who would immediately destroy the vast, priceless industries and institutions we have toiled so hard to build up. The "rights of the working man," the "struggle between Capital and Labor," and the "greed of the upper classes" are the gaudy-colored, sweet-tasting lollypops in the mouths of this gang.

I refuse to be bribed with a lollypop. A person who hands out bait of this kind always carries a trap up his sleeve. A fellow who seems terribly anxious to sympathize with you because you are downtrodden will bear watching—he's looking for a chance to pick your pocket while you are off your guard, listening to his mushy talk. The minute a seedy, greedy, eloquent chap starts to tell me I "ain't treated right and shouldn't stand for it," I close my fist around my pocketbook and rush a glance to my watch-pocket to see if the chain still holds. If every working man were as careful, half the strikes and other disputes of employees would never be pulled off.

I belong to the working class.

Every honest man does.

I work harder with my brain than the average day laborer, so-called, works with his hands. I use up more nervous energy than he does, I am more tired than he is at night. When I need rest, I work with my hands! That is how hard I work.

Being a toiler, I am naturally on the side of the toiler. When a group of working men start to fight to improve conditions for themselves, I want to see them win. But they cannot win by using wrong methods. They cannot win by turning Bolsheviki. They cannot win by wasting time in foolish talk, or in stirring up class hatred, or in following blind and selfish leaders, or in forcing claims that are unjust, wild and rash.

The new war in America is the war of the awakened workers of the world. It has a good side and a bad side. The good side is that the workers are awake and fighting. The bad side is that they are mostly following

wrong leaders and wrong methods. If you wake a man suddenly from a sound sleep, how he talks and acts! His words are a growl, mumble and jumble, his actions are a cross between a bear shaking itself and a bantam rooster sparring for a fight. The poor fellow is awake enough to say and do something, but not awake enough to say or do anything rationally.

Most of the workers of the human family have been asleep since the world was young. Now the workers have begun to wake to their own powers, privileges, rights, possibilities and opportunities. They are muttering loudly and striking out in all directions. Good! When they gain full possession of their senses, they will do great things wisely and well. It is good to be awake, it is better to be awake and also wise. Labor has been a sleeping giant. When Labor is roused to the point of using head, heart and hands together—civilization will be clean made over!

What now are some of the causes of the industrial strife prevailing thruout America? Charles M. Schwab, the man with the million dollar salary, voiced the opinion of most of the real captains of industry when he declared: "I seriously doubt if labor has, in the years gone by, received its fair share of the prosperity of this great country."

So employees, naturally feeling abused, cast all the blame on employers. But I asked the founder of the National Civic Federation—the organization that has probably done most to bring employees and employers together—who was to blame for the strife between Capital and Labor. He said both sides were equally to blame; the man of wealth and the man of muscle were both likely to be prejudiced, narrow, ignorant, selfish, unfair. He intimated that no strife or other serious labor difficulty ever occurred without wrong on both sides.

The conclusion seems to be demonstrated in such great industrial plants as the Edison Laboratories, the Wanamaker

Noten Kraker, Amsterdam

The characteristic attitude of Bolshevism, in a Dutch cartoon: "These are my arguments. What can you say against them?"

San Francisco Bulletin

The spreading flame of Bolshevism, with Death in its wake, kindles Europe—and sweeps on, if we permit it

Stores, the National Cash Register Company, the Ford Motor Company, the National City Bank, the United States Steel Corporation. Here Capital and Labor pull together, instead of pulling apart. Not only are dividends larger, but wages are higher, working conditions better, complaints and grievances so few as to cause no deep concern, with strikes and other conflicts unknown. Wherever employer and employee both honestly try to be fair with each other, good feeling prevails, good work results, good profits accrue. Why expect good pay if you don't do good work? A decent man always makes sure that he is doing better work before he demands bigger pay. Otherwise, he is a beggar.

Another cause of labor unrest is the persistence of the dark-age "boss" idea. Every

"boss" is a loss to the owner of the business, and a cross to the workers in it. A man has no right to give orders merely because he has a right to give them. A business must be run by military firmness, but that is based on military science and a mutual desire to conquer a common foe. John Masefield, who rose from a bartender to be a great poet, says, "The only things which matter in war are courage and love of your comrades."

If the man over you in business has in his heart no love of his comrades, you and the rest of them should have the courage to insist that he reform or resign. Obey the man's orders—then demand that he justify them. The rule of reason and of right is the only one that American workers should tolerate.

Another source of labor troubles is the foreign element. You can't mix together Jews, Irishmen, Scotchmen, Poles, Italians, Germans, Hungarians and Scandinavians with a ghost of a chance to satisfy them all. Here is a problem of the employer seldom regarded by the employee. In a western mining camp, as many as thirty-two separate nationalities have been discovered. Even the workers in highly organized city plants, such,

Morgan on the Philadelphia Enquirer

Under the Stars and Stripes: Bolshevism makes convenient camouflage of our flag to further the propaganda of destruction and to launch its firebrands against American government

for example, as the Chicago Stock Yards, may be only 10 per cent American. How is the employer to harmonize workers of a dozen races who can't even understand fully what he is talking about, and who would never want the same things in a hundred years even if he could give them whatever they all agreed on? You can't pick out a dozen straight Americans who will agree absolutely on a program for Capital and Labor to follow. Add the foreign element, and you leave the employer up a stump.

When John H. Patterson made a rule that his employees should have plenty of light, soap and water, a lot of the men in his factory put up a loud complaint, insisting that they were being insulted. They were free-born Americans, and they didn't have to take a bath. Citizens of the community sadly mourned that a good man like Patterson had gone crazy, while other manufacturers reported abroad that he had turned the National Cash Register Company into a finishing school for young ladies. When a "boss" tries to be decent, forthwith he is damned. It is no easy job to treat workers like human beings—when some of them aren't.

A big volume would be necessary to describe all the reasons for the dissatisfaction of American employees, or employers, or both. We name a few more, just to point out their variety and complexity: High cost of labor turnover; partiality in hiring and firing; difficulty in marking and eliminating "floaters"; class distinctions between heads of departments and employees; overwhelming proportion of misfits, and therefore malcontents, among workers; large increase of women applicants for men's jobs, frequently at lower wages; keener competition without finer preparation; monotony and drudgery, with no compensating future; oppression at one extreme of management, paternalism at the other; huge influx of machines to supplant men who never learned to think; false reliance on "collective bargaining" to lift workers as a class before they are ready to be lifted; assumption that all workers, good, bad or indifferent, belong on the same wage level; natural human tendency, of both employer and employee, to blame the other fellow when something goes wrong; hatred of unions by employers, and worship of unions by employees; ignorance on each side of the aims, problems,

*Handing of Branches. Do by Leaf.*

A Foreign Growth—Shall we let the weed of Bolshevism take root and grow at the cornerstone of our American institutions?

worries and difficulties on the other side; lack of common meeting ground, where trivial complaints and minor misunderstandings could be threshed out before they went beyond control.

In the majority of cases of industrial turmoil, neither Capital nor Labor is entirely to blame. The fault may be more that of Capital, or more that of Labor, or equally that of both, or equally that of neither. Trade conditions or economic fluctuations, for which no one is responsible, may lie at the bottom of the state of unrest. The point we wish to make is that no problem of employment can be settled as you would dash the scum off a stagnant pool; you have to probe to the depths of the situation before you can even locate or formulate the problem. A dispute means either disaffection or disability on both sides—and a decent man is ashamed of either. A fellow bent on loot hates light; if you aren't out on a looting expedition, you won't do any hating till

you get some light.

For years to come, the problem of the world is that of reconstruction. A large group of prominent business and professional men of our section, wanting expert advice, arranged a consultation with a high authority in the United States Department of Labor. Asked to mention the greatest peril to American interests, he replied immediately: "The economic war. This war has just begun. It started in Europe thru poverty, hunger, discontent, Bolshevism, anarchy, violence, demoralization of society. The war against these destructive elements and particularly against radical socialism, German and I. W. W. propaganda, unemployment, timidity of employers and rashness of employees, and other fatal and insidious social and economic influences, is yet to be fought. The fight is one that requires all the strength of our courage, sacrifice and preparation.

"Two hours after the armistice was signed, the German employees of the huge Krupp munition works had stopped making weapons of war to shoot us in the heart, and were making products of peace to shoot us in the purse. The close of the war came two or three years before we expected it. We had changed this country into a great war machine running full blast. Everything and everybody was thrown out of gear, as when you stop a steam engine by putting a boul- [Continued on page 372]

# Getting in a Few Good Digs

## The Gardener's Strategy Against Weeds and Weather

By F. F. Rockwell

**T**HE most critical time in the vegetable garden comes with the advent of the first few weeks of real hot, dry weather. The garden that is prepared to meet this emergency will go thru successfully. The garden that is not, will go under.

The first thing that should be learned in connection with the summer gardening is that plants will now succumb to injury or neglect which would hardly have affected them during the spring. While the weather remains moist and warm, it is hard to kill most vegetables. Even the attacks of many insects are withstood more or less successfully. You have doubtless seen a stray cabbage plant dropt on the surface of the ground, or a seedling thinned out of the row, take root and live.

Conditions now, however, are very different. Plants have all they can do to keep going ahead even where every possible advantage is given them. If they do not get the best of care, the results will quickly be evident in "crops that don't grow as they ought to," and a harvest of disappointments in lieu of vegetables.

One of the things which frequently cuts down the yield to a large extent, destroying some plants outright and injuring others to a great degree, is allowing big weeds to develop in the garden. A row of radishes, lettuce, spinach or some early stuff that has "gone by" is neglected. Before the gardener realizes what is happening, some weeds that have escaped earlier notice have shot up into the air, giving the entire garden a neglected appearance. But the appearance is not the worst of it. Try to pull up one of these big fellows, and you find that half a dozen vegetable plants come up with it. A couple of dozen more are so loosened in the soil that they are injured seriously. Furthermore, each of these big weeds in growing has robbed a large area of moisture and of plant food which your vegetables sorely needed, for the roots usually extend laterally at least as far as the weed has grown up into the air.

Of course, no one likes to spend time, money and energy keeping the weeds out of the crops that have "gone by" and from which no further benefit is to be derived. So the answer is: remove at once the remains of every crop just as soon as the last "mess" of vegetables is picked or pulled. Every day you delay means just

that much soil moisture and plant food wasted; just that much less chance of succeeding with the new crops that should be planted where the first one has been removed.

What can be planted for second crops? Almost anything that will mature in your locality before danger of frost. You know—or any of your gardening friends can tell you—about when the first killing frost is to be expected.

The table herewith shows the approximate dates for planting different kinds of vegetables for different purposes. Of course many of them can be planted as late as the last date mentioned, but the dates suggested are based on bringing the stuff to maturity when it can most conveniently be used for the purpose indicated. The last column shows the latest date when you can sow with reasonable assurance of the plants "coming thru" all right in your locality. In planting near the late date limit, always use an *early* variety.

**S**UCCESS with the late planted crops depends to a great extent on getting a good strong start. Whenever possible, plant just *after* a good soaking rain. Planting before a rain is not desirable except in a loose, sandy soil, because a heavy rain beats and packs down the surface, forming a crust thru which small seedlings cannot easily force their way up.

But good soaking rains are likely to be conspicuous by their absence at about the time of the year you want to make these late plantings. If you have not got an irrigation system (which automatically solves all problems of this kind, as well as many others) there are two things you can do. The first is to *pre-sprout* the seeds before planting, that is, soak them in lukewarm water (twenty-four to forty-eight hours is generally sufficient) so that they are just about ready to sprout before you plant them. After soaking, if the seeds are rolled in sifted dry soil or in wood ashes, the surplus moisture will be absorbed and they can be handled and planted readily without sticking together.

The second thing to do is to firm the seeds in the soil. The importance of doing this when planting in dry weather can hardly be overemphasized. Peter Hender-

son, one of the pioneer seedsmen of this country, used to tell the story of one of his customers who sowed a large field of turnips near his melon patch. Dry weather followed, and the only turnips which came up were those in the number eleven footprints of a couple of colored night operators who were scared out of the melon patch.

All seeds depend for germination upon absorbing a sufficient amount of moisture from the soil to cause them to swell and crack. Soil that is firmly prest down will soak up moisture from the moist soil below, while soil that is left loose will not do so. Soak your seeds before planting, and then when sowing press the soil down firmly over them—either by tamping them in with the back of the hoe, or pressing along the row with the ball of the foot, or firming it down with the edge of a board—and you are not likely to have trouble in getting a good “stand” of seedling even in dry weather.

Of course, it is just as important to keep already growing plants strong as to start new ones. About this time of year a new difficulty in the gardener's way is almost certain to be encountered. That difficulty is a lack of moisture. Without moisture in the soil, growth must be slowed down and gradually cease altogether. It does not reach the latter state except as the result of a prolonged drought. But the extent to which an ordinary amount of dry weather cuts down the garden's products is not realized by most gardeners. To be fought off as successfully as possible, this condition must be provided against *in advance*.

Maintaining a mulch of fine dry soil is the first thing to be done. As soon as you stop working the soil or right after a rain, the surface will settle and gradually form a crust. If this surface crust is allowed to remain, the moisture from the lower layers of the soil will work up to it and be evaporated rapidly from the surface. This can be prevented to a very great extent by keeping the surface of the soil continually stirred, so that it is kept dust dry.

You have probably noticed how moist the soil will remain beneath a piece of board or a flat stone. This dry surface mulch acts in the same way. Below the dry soil the moisture is retained. It may seem to you time-wasting, unprofitable work to go over your garden every week or so during dry weather, when not even weeds are growing, to keep the surface well stirred up and loose, fine and dry. But the results will pay you amply for your efforts.

To do this important work successfully make use of the best tools you can get. For the large garden, of course, the single or double wheel hoe, with suitable attachment, should be used. For the small garden the slide or “scuffle” hoe should be employed. There are two kinds on the market, which are much easier to use than the old type. One of these has two guides or runners of heavy, stiff wire, which holds the blade in position, making it possible for an inexperienced operator to do good work; and permitting more rapid work. Where there is room the ordinary hand rake is one of the most effective mulching tools that can be used.

Where they can be obtained, a mulch of fine manure, grass clippings, or some similar material, is even more effective than the dust mulch. A watering applied thru a mulch of this kind will be more effective than one put on uncovered ground. Use all the old manure you can find anywhere for mulching such things as egg plant, cauliflower and celery, which are particularly insistent upon having plenty of moisture to produce a satisfactory crop.

The art of watering is not as simple as it may seem to the beginner.

In fact, water applied frequently in limited quantities to the surface, as is often done, may do more harm than good. Observe the following simple rules, in using hose or watering can: Water toward evening or on a cloudy day. Give a thoro soaking that will wet the soil clear down to the roots. [Continued on page 369]

### When to Plant Vegetables for Winter Use

Save all the waste vegetable matter, grass clippings and similar material for the compost heap. They make “humus” for next year

Conserve as much moisture as possible by mulching in dry weather, and spread the “spent” manure along the rows

FIRE drills are good, but not infallible. In spite of the drill, when a real fire burst out, this little boy, stricken with senseless panic, hid in a dark cloakroom.

## Who is supposed to guard the lives of school children anyway ?

"NOW, Willie, be careful when you cross the tracks."

Mother stands in the doorway, watching her little boy running down the street.

And then, turning to father she says, "I always worry till I think he is safe inside the school-house door."

But once safely inside that door, Willie is supposed to be out of danger for the next six hours at least. Unthinking parents never stop to consider the daily fire menace that exists in school buildings.

You have a hazy idea that school buildings are safe because somebody told you so. "Fire drills" and "fire escape" sound safe enough—fine—until the flames are leaping through the window.

### *Take these Plain Facts*

Some five billion dollars of business property has been protected from fire by automatic sprinklers.

State Industrial Commissions are guarding the lives of factory employees by requiring this same unfailing protection in business property.

The United States Government insisted on war industries being so protected.

School fires start in mysterious out-of-the-way places, and smolder along unnoticed in a vacant room or

closet. Then suddenly there comes a terrible roaring and in a few moments the whole building bursts into flame.

Investigate conditions in your school yourself. Don't let anyone assure you that your school is safe enough till you understand what that safety means. Don't fool yourself because the doors open outward and the stairway is of iron.

You could provide a dozen, yes fifty minor "safeguards" and only find when the schoolhouse is burned up, that all these superficial methods of protection will never accomplish one-tenth what the Grinnell Automatic Sprinkler System will. The Automatic Sprinkler System equals a hundred firemen right there, always on the job.

As soon as a fire starts in any place in the building, these automatic firemen come into action and drown the fire before it becomes a menace.

### *Read—"Fire Tragedies and Their Remedy"*

Any individual, trustee or official will find in "Fire Tragedies and Their Remedy" the unvarnished truth and a path of imperative social service. Write for it today. Address General Fire Extinguisher Company, 286 West Exchange Street, Providence, R. I.

## AUTOMATIC SPRINKLER SYSTEM

When the fire starts the water starts

# What's Happened

The Austrian peace terms were completed on May 27. The Austrians will be required to pay a billion dollars toward reparation within two years. The army is reduced from a million to 16,000. All warships are surrendered. America will keep the interned ships.

Prince Edward has asked the Paris Conference to admit the Principality of Liechtenstein, area 65 square miles, in order that it may conclude peace with Germany, with which it has been technically at war since 1866.

British railway, coal mine and transport labor unions, numbering 1,500,000 men, demand abolition of conscription, withdrawal of troops from Russia, lifting of blockade against Germany, release of conscientious objectors and income tax exemption of \$1200.

The Chinese Government has authorized the signing of the peace treaty, but with reservation in regard to the Shantung Peninsula, which was delivered to Japan.

Ten thousand former soldiers and sailors paraded the London streets and approached the House of Parliament, demanding work and a minimum wage. The police dispersed the mob with difficulty.

Polish atrocities are being reported to the Paris Conference. At Pinsk thirty-five young Jews who were distributing the Passover bread were shot in the presence of their families. At Vilna 200 men, women and children were massacred in a synagogue.

The Council of Four has agreed to recognize the Siberian Government of Admiral Kolchak at Omsk on condition that he calls a genuine constituent assembly and accepts the League of Nations covenant.

The Estonian army of 20,000 men has taken Pskov, 170 miles southwest of Petrograd, and is reported to be rapidly advancing on that city, while General Maynard, in command of British and American troops, is approaching from Lake Onega on the north.

Fifty-seven food merchants—all one variety—were marched to a gallows erected by the infuriated populace in Prague and given their choice between being hanged as profiteers and signing a solemn oath that they would sell their goods at reasonable prices. They signed.

Lieutenant Roget, the French aviator, has established a world's record for distance covered in sustained flight. He flew 1361 miles in twelve and a half hours, without stopping: an average speed of about 114 miles an hour. The flight was from Paris to Kenitra, twenty miles from Rabat, in Morocco.

An eruption of the volcano of Kalut, or Klut, on the Island of Java has wiped out 31 villages and killed 15,000 people. In May, 1901, this volcano also caused wide devastation.

London Opinion

A dangerous weapon

The Poles are driving the Ukrainians out of Galicia and have taken Lutsk with 10,000 Ukrainian prisoners.

One million dollars saved on steel rails by the recently dissolved Industrial Board of the Department of Commerce is one answer given by Chairman George N. Peek to Director General of Railroads Hines, who complained that the \$47 per ton price was unreasonable. This price was \$5 lower than the Railroad Administration was able to get in independent negotiations.

Director General of Railroads Hines has asked Congress to appropriate \$1,200,000,000 in addition to the \$500,000,000 already provided, to meet deficits and to continue government operation of the railroads. The loss up to April 30 was \$486,000,000. General trade depression and extraordinary operating expenses during the severe 1917-18 winter are given as causes.

Republican women will henceforth share all party privileges and responsibilities. Party chairmen from all States decided the question in conference at Washington. Fifteen million women, at least, will vote in 1920. If the Federal Amendment passes, there will be more.

Two thousand civilians and five hundred military German nationals who have been interned during the war will be deported. The conduct of these has been satisfactory; those who are regarded as dangerous enemy aliens are not to be released. Still others, who have expressed a desire to become citizens of the United States, will be honored if their declarations are sincere.

Secretary Baker will ask Congress for appropriations to maintain an army of 500,000 men for 1920. This does not affect the consideration to be given later to the question of a permanent military establishment.

The American Defense Society has started an intensive movement in favor of universal military training. Presidents of colleges where students' army training corps were in operation, and

other national societies interested will be invited to join the movement.

Tho the Federal amendment for woman suffrage passed the House, 304 to 89, Southern Democrats still voice States' Rights doctrines in opposition. The point was stressed by nearly all orators who argued against suffrage.

Neurologists of the New York Academy of Medicine assert that inevitably with liquor prohibition will come a tendency on the part of former drinkers to indulge unduly in certain foods. Dr. A. A. Brill cites an instance of an ex-alcoholic who periodically went on a prodigious "roast beef jag."

The end of the fifteen-week strike of the Lawrence textile mill operatives was marked by lack of jobs for those who wished to return to work. Many of the strikers are idle, but no further measures for their financial relief by the strike committee of the Amalgamated Textile Workers are announced.

A record week for homecoming American troops brought 74,598 fighting men to New York alone. Twenty-seven troopships entered that port, while many thousands of men were landed at Newport News, Boston and Charleston, South Carolina.

No contribution over \$1000 will be received to finance the coming Republican national campaign. Chairman Hays plans country-wide organization to obtain hundreds of thousands of contributions from \$1 up. With the new plan passes the old idea of great corporation contributions.

The status of 2.75 per cent beer has been determined judicially by a preliminary injunction granted by Federal Judge Julius M. Mayer. If the injunction stands the war-time prohibition law effective July 1 will not affect the manufacture of beer containing not more than 2.75 per cent of alcohol.

Any woman who has the physique, the ambition and can pass the civil service examination can become a regular "cop" in New York City. Women are no longer excluded by the Municipal Civil Service Commission. A night-stick and a regular beat go with the job.

In Henry Ford's million-dollar suit against the Chicago *Tribune*, the sociological department of the Ford plant is to the fore, producing officials testifying that health and service records are kept of all employees, and that National Guardsmen who went to Mexico got their jobs back.

Casualties in the American expeditionary forces now total 282,549. Of these 32,869 were killed in action, 13,507 died of wounds, and 23,145 of disease. Of 204,828 men wounded in action, over 85 per cent returned to active duty.

The Victory Loan was oversubscribed by nearly \$750,000,000. There were 12,000,000 subscribers, and nearly 60 per cent of the total subscriptions came

in sums of \$10,000 or less. The New York district led, with 2,482,932 individual buyers.

The Friends of Irish Freedom in New York have inaugurated a nationwide campaign to raise \$2,000,000 for the cause of Irish independence. New York City's quota will be \$150,000.

## Getting in a Few Good Digs

(Continued from page 366)

Examine carefully after watering to be sure that enough water has been used to moisten the soil six or eight inches down. To save time with watering, open up a trench with hoe or wheel hoe along the row and let the hose run into this till it is full. After the water has soaked away turn the earth back over the trench. This gets the water down around the roots, and covers it with dry soil, thus preventing rapid evaporation. Be sure to apply the water as evenly as possible.

**A**LONG with dry weather, trouble may be expected from the various insects and diseases which are pretty sure to put in an appearance in any garden. The only way to control these successfully is to be everlastingly on the look out for them, and to be prepared to fight them immediately.

These injurious insects belong chiefly to two distinct types—those which chew or eat portions of the leaves or stems of fruit, and those which suck the plant juices. Potato bugs, cabbage worms, etc., are examples of the former class; the various aphids, plant lice and scales are examples of the latter.

Against the eating insects it is possible to use a stomach poison, such as arsenate of lead or Paris green. In the great majority of cases arsenate of lead is the most satisfactory thing to use. It can be obtained in paste or powdered form, and applied dissolved in water or in the form of dry dust.

For the sucking insects, a "contact" poison, like nicotine or extract kerosene emulsion must be used. To be effective, these must come in contact with the insects. Forty per cent nicotine sulfate is the most effective and convenient thing to use under most conditions.

**T**HE diseases attacking vegetables are more difficult to control than the insects. In fact, they cannot be cured, so the only safeguard is prevention. The standard spray against fungus plant diseases is Bordeaux mixture. For the small garden this is most conveniently used in combination with arsenate of lead, making a two purpose spray. There are several brands of arsenate of lead Bordeaux mixture on the market. When sucking insects are present, add to this spray a suitable quantity (usually about one teaspoonful to the gallon of liquid) of nicotine sulfate. This combination spray will control eating insects, sucking insects, and diseases. Get into the habit of spraying your garden just as regularly as you cultivate it.

Brooklyn

## The Ideal Floor Covering

What could be more appropriate for summer than CREX grass rugs?

Their well-known sanitary qualities, durability, attractiveness and low cost stamp them at once as ideal for the Hall, Living-Room, Dining-Room, Bedroom, Sun Parlor and Porch.

CREX rugs do not absorb the dust and dirt which even screened windows and doors invite. Easily cleaned with damp cloth and light shaking.

The natural grass blending with soft neutral color-designs tends to virtually link indoors and outdoors as one.

Three weaves—De Luxe, Herringbone and Regular—in wide variety of patterns and colorings to choose from.

All grass rugs are not CREX. Don't be deceived by imitations. Insist on the genuine.

# *A Startling Memory Feat That You Can Do*

**How I learned the secret in one evening. It has helped me every day**

**W**HEN my old friend Faulkner invited me to a dinner party at his house, I little thought it would be the direct means of getting me a one-hundred-and-fifty per cent. increase in salary. Yet it was, and here is the way it all came about.

Toward the close of the evening things began to drag a bit, as they often do at parties. Finally some one suggested the old idea of having everyone do a "stunt." Some sang, others forced weird sounds out of the piano, recited, told stories, and so on.

Then it came to Macdonald's turn. He was a quiet sort of chap, with an air about him that reminded one of the old saying that

"still waters run deep." He said he had a simple "stunt" which he hoped we would like. He selected me to assist him. First he asked to be blindfolded securely to prove there was no trickery in it. Those present were to call out twenty-five numbers of three figures each, such as 161, 249, and so on. He asked me to write down the numbers as they were called.

This was done. Macdonald then astounded everyone by repeating the entire list of twenty-five numbers backwards and forwards. Then he asked people to request numbers by positions, such as the eighth number called, the fourth number, and so on. Instantly he repeated the exact number in the position called.

He did this with the entire list—over and over again, without making a single mistake.

Then Macdonald asked that a deck of cards be shuffled and called out to him in their order. This was done. Still blindfolded, he instantly named the cards in their order backwards and forwards. And then to further amaze us he gave us the number of any card counting from the top, or the card for any number.

You may well imagine our amazement at Macdonald's remarkable feat. You naturally expect to see a thing of this sort on the stage, and even then you look upon it as a trick. But to see it done by an everyday business man, in plain view of everyone, blindfolded and

under conditions which make trickery impossible, is astonishing, to say the least.

\* \* \* \* \*

ON the way home that night I asked Macdonald how it was done. He said there was really nothing to it—simply a memory feat, the key to which anyone could easily learn in one evening. Then he told me that the reason most people have bad memories is because they leave memory development to chance. Anyone could do what he had done, and develop a good memory, he said, by following a few simple rules. And then he told me exactly how to do it. At the time I little thought that evening would prove to be one of the most eventful in my life, but such it proved to be.

What Macdonald told me I took to heart. In one evening I made remarkable strides toward improving my memory, and it was but a question of days before I learned to do exactly what he had done. At first I amused myself with my new-found ability by amazing people at parties. My "memory feat," as my friends called it, surely made a hit. Everyone was talking about it, and I was showered with invitations for all sorts of affairs. If anyone were to ask me how quickly to develop social popularity, I would tell him to learn my memory "feat"—but that is apart from what I want to tell you.

The most gratifying thing about the improvement of my memory was the remarkable way it helped me in business. Much to my surprise I discovered that my memory training had literally put a razor edge on my brain. My brain had become clearer, quicker, keener. I felt that I was fast acquiring that mental grasp and alertness I had so often admired in men who were spoken of as "wonders" and "geniuses."

The next thing I noticed was a marked improvement in my conversational powers. Formerly my talk was halting and disconnected. I never could think of things to say until the conversation was over. And then, when it was too late, I would always think of apt and striking things I "might have said." But now I can think like a flash. When I am talking I never have to hesitate for the right word, the right expression or the right thing to say. It seems that all I have to do is to start to talk and instantly I find myself saying the very thing I want to say to make the greatest impression on people.

It wasn't long before my new-found ability to remember things and to say the right thing at the

right time, attracted the attention of our president. He got in the habit of calling me in whenever he wanted facts about the business. As he expressed himself to me, "You can always tell me instantly what I want to know, while the other fellows annoy me by dodging out of the office and saying 'I'll look it up.'"

\* \* \* \*

I FOUND that my ability to remember helped me wonderfully in dealing with other people, particularly in committee meetings.

When a discussion opens up the man who can back up his statements quickly with a string of definite facts and figures usually dominates the others. Time and time again I have won people to my way of thinking simply because I could instantly recall facts and figures. While I am proud of my triumphs in this respect, I often feel sorry for the ill-at-ease look of the other men who cannot hold up their end in the argument because they cannot recall facts instantly. It seems as though I never forget anything. Every fact I now put in my mind is as clear and as easy to recall instantly as though it were written before me in plain black and white.

We all hear a lot about the importance of sound judgment. People who ought to know say that a man cannot begin to exercise sound judgment until he is forty to fifty years of age. But I have disproved all that. I have found that sound judgment is nothing more than the ability to weigh and judge facts in their relation to each other. Memory is the basis of sound judgment. I am only thirty-two, but many times I have been complimented on having the judgment of a man of forty-five. I take no personal credit for this—it is all due to the way I trained my memory.

DAVID M. ROTH

"Our president complimented me on always being able to tell him instantly facts he wanted to know."

THESE are only a few of the hundreds of ways I have profited by my trained memory. No longer do I suffer the humiliation of meeting men I know and of not being able to recall their names. The moment I see a man his name flashes to my mind, together with a string of facts about him. I always liked to read but usually forgot most of it. Now I find it easy to recall what I have read. Another surprising thing is that I can now master a sub-

ject in considerably less time than before. Price lists, market quotations, data of all kinds, I can recall in detail almost at will. I rarely make a mistake.

My vocabulary, too, has increased wonderfully. Whenever I see a striking word or expression, I memorize it and use it in my dictation or conversation. This has put a remarkable sparkle and

pulling power into my conversation and business letters. And the remarkable part of it all is that I can now do my day's work quicker and with much less effort, simply because my mind works like a flash and I do not have to keep stopping to look things up.

All this is extremely satisfying to me, of course. But the best part of it all is that since my memory powers first attracted the attention of our president, my salary has steadily been increased. Today it is many times greater than it was the day Macdonald got me interested in improving my memory.

\* \* \* \* \*

WHAT Macdonald told me that eventful evening was this: "Get the Roth Memory Course." I did. That is how I learned to do all the remarkable things I have told you about. The publishers of the Roth Memory Course—the Independent Corporation—are so confident that it will also show you how to develop a remarkable memory that they will gladly send the Course to you on approval.

You need not pay a single penny until you have examined the Course and found that it fully lives up to all the claims made for it. Send no money. Merely mail the coupon, or write a letter, and the complete Course will be sent to you instantly, all charges prepaid. If after examination you decide that you do not want to keep the Course, then return it and you will owe nothing. On the other hand, if you find, as thousands of others have found, that the Roth Memory Course will do wonders for you, then merely send five dollars in full payment.

You have always wanted a good memory. Now you can have it. Remember, you pay no money until you have proved that the Course will benefit you. You have everything to gain and nothing to lose by taking immediate action. So mail the coupon NOW before this liberal offer is withdrawn.

# Wake Up Americans

(Continued from page 364)

der on the track. Millions of war workers went up in the air. They blamed their employer or the Government, when neither was to blame. And such misunderstandings still prevail.

"The United States had about 6,000,000 men under arms, including soldiers, sailors, experts of all kinds, and civilian draftees or volunteers. In addition, a million or two women specially trained for war activity were thrown out of a job. Here we have about one-fourth of the entire adult working population of the United States hunting jobs, all at the same time. This fact alone would tend to produce a war of industrial relations. A man with a job of any kind at a living wage ought to be mighty grateful, and decent enough to avoid making trouble over small matters. There are 500,000 unemployed American workers who would be glad to have his job, and the number is increasing by 20,000 every week.

"The men out of work are mostly heroes of the war. They are sacrificing money waiting for work, as they were willing to sacrifice blood, fighting for us and the world. The man who growls or loafes on the job he never had to give up is not only a slacker and traitor—he is a fool. If he lets that job go or works so poorly as to be discharged, he will soon learn for himself how grave the unemployment problem really is. Hundreds of thousands of returned soldiers could tell him that one of the greatest blessings of life is a chance to do a full day's work."

SO much for the results of the war. But they do not explain fully the situation, the fundamental reasons for which are as old as life on this planet. Struggle is the law of Nature. Life means strife or it means nothing. From the worm to the god, every being has to fight for existence. And the weak goes to the wall. The lion devours the lamb. The big fish swallows the little ones. The bird of prey rules the heavens. The bold man takes the cowardly man a captive and makes him a slave. The richest country dominates the world. Everywhere the rule is the same—power controls destiny.

God made the universe that way. In the realm of Nature, might rules. In the realm of God, right rules. We human beings are halfway between the realm of Nature and the realm of God, so it takes might plus right to rule in the end. The man who becomes and remains a leader is the man who having might adds right, or the man who having right adds might. And the very hardest human fight is the fight to harness right and might up together and then to make them work as a combined force.

Every man who attempts to do anything worth while has a fight on his hands. The moment you try to emerge from the crowd you will find yourself a target. Missiles of hate, envy and jealousy will be flung at your head. People

will damn you for no reason at all. Some of those you held your truest friends will betray you. The devils, the fates and the gods will seem to conspire against you. You will have to fight back or go under. The fighting habit, the conquering habit, must be a part of the training, the method, the equipment, the character, the very life, of the man who succeeds.

I am not going to be fool enough to ask any worker to stop fighting and relax into a weak-nerved, soft, spined, faint-hearted, mushy-mouthed apology for anybody. All that I ever got worth while was got by fighting. A thing not worth fighting for is not worth having.

Orr in Chicago Tribune

They are all out of step but me

But there are wise ways and foolish ways, good ways and bad ways, sure ways and feeble ways, of fighting for the things you want.

I would like to suggest a few practical lessons that have come thru an experience of twenty years in battling with men, conditions, organizations, surroundings, handicaps, limitations and worries that made trouble for me and blocked the line of advance. I fought the same things you are fighting—and I won by using the right methods.

I FOUGHT poverty. A mere living wage was not enough. The chance to save money for old age was not enough. I wanted to found enterprises that would take several small fortunes to operate. The people who had money were not interested in the life purpose of an exceedingly young man. So I fought the idle rich. But that got me nowhere. I studied the methods of the producers of wealth, and I found they were all manufacturing an article, supplying a need, rendering a service, that the public wanted. I resolved to make my productions equal a quality and quantity standard of service to the public. Then large corporations sought those produc-

tions, institutions were formed to deliver them to the public, the demand grew and grew. The poverty I had fought as a young man was nothing more than my own stupidity and inability. The poor need only to be sure of themselves. Where futility objects, utility obtains.

I fought necessity. Routine was hateful and monotony maddening. The idea of being forced to work all day for any kind of "boss" got on my nerves. I wanted to smash the face of the clock that told me when it was time to go to work. Fearful oppression was the lot of employees, I decided in the feverish outlook of early youth. But later, on meeting some of the millionaires I had envied, I found they worked longer and harder than I did. They were tied up with a dozen obligations where I had only one. Most of them had even to place their spare time at the disposal of the corporations they served. I stopped fighting necessity and began shouldering responsibility. Today my time is my own; some days I work fourteen hours—other days I work only three hours. But before I could earn and use properly the freedom to work only three hours, I had to wind up my will so that I could and would gladly work fourteen hours if necessary. And now if the day were a hundred hours long, I could not begin to get done all the things that I want to do! Men are not slaves to their working hours—they are slaves to their idle inclinations.

I fought society. Nothing seemed fair. The rich were too rich and the poor too poor. Inequality and injustice abounded. I listened to the arguments of socialists, anarchists and other impossible reformers. They sounded very comforting. But I soon learned that if I joined one of these discontented brotherhoods, and ever accomplished or accumulated anything, immediately they would take my possessions and distribute them to the fellows who had done nothing but talk! They were just plain robbers in the guise of reformers. I learned also from a study of human psychology and the divine laws of the universe, that a man gets what he earns and earns what he gets. Justice always prevails in the end. By working as hard and as well as I could, taking pleasure in the process, and trying to be fair and friendly to everybody, I outgrew a sickly state of chronic pessimism and built myself a platform of sound optimism and storm-proof enthusiasm on which I now stand.

I fought enmity. I fought frailty. I fought obscurity. I fought adversity. And I found at the end of each fight merely a repetition of this unwelcome but undeniable truth: A man's real foes are in himself. The man who faces this truth and follows the light he gets from studying it has won beforehand the hardest part of any battle with Fate.

This chapter from my own experi-

ence would be out of order, in this or any other public place, but for the fact that suggestions have grown from it leading to a possible solution of most of the problems of the worker in relation to his work and to his employer. I have been thru the mill. I have worked as hard, fought as long, endured as much as any man who reads this article. And I have won out by doing precisely those things to be suggested later on. The same principles of economics, ethics and industry apply to all kinds of work and all classes of workers. I have helped thousands of workers in hundreds of different occupations to demonstrate this fact. The science of personal efficiency is as universal as the science of mathematics. Your product may be anything from shoes to sermons—if you know how to get the most and best out of yourself, you will get the most distribution and the best reward out of your production.

The man who fails is always a man who could not or would not fight. He lay down and gave up. But the man who fails worst is the man who fights wrong. He wastes and weakens himself, so that when hit and knocked out he cannot come back.

What is the American employee fighting for? Better wages, shorter hours, easier conditions, fewer obligations, wider opportunities, quicker promotions, larger powers. Granted that these objects are desirable, how is he fighting? Mostly by following leaders who are themselves failures and whose only hope of success lies in destroying other people's property and running off with a portion of the swag. Much of the serious trouble between Capital and Labor is started by men with a personal grievance or temperamental grouch, who can't get what they want unless they have a gang behind them. It is the strength of might, and not the strength of right, they depend upon. If a man urges you to go on strike or neglect your work, or emits angry, envious words, or otherwise acts like a Bolshevik, ask yourself if you would lend this man money, take his advice on how to succeed, or indorse his personal note.

Is the man you follow most eagerly a thoroughbred—or a mongrel? A real American worker is a thoroughbred—a fake Bolshevik talker is a mongrel.

**T**HE typical Bolshevik, wherever you find him, is always destructive—never constructive. He is sick in body, or mind, or both. He is utterly selfish. He is immoral—openly or secretly. He is devoutly in favor of mob rule. He is hopelessly prejudiced. He is constitutionally lazy. He is indifferent to the rights and wishes of others. He is ignorant of science, art, philosophy, ethics and economics. He is atheistic, or at best irreligious.

On the other hand, a good American worker is shrewd, healthy, honest, clean, strong, fair, energetic, loyal, ambitious, reliable. Do you tolerate Bolshevism or cultivate Americanism in your personal habits of thinking, talking, working and living?

(To be continued)

## Do You Remember The Old Corn Doctor?

© B & B 1919

He stood on the street, in the olden days, and offered a "magic corn cure."

The same ingredients, harsh and inefficient, are sold in countless forms today.

But they did not end corns, and they do not now. Nor does padding, nor does paring—methods older still.

### The One Right Way

Modern scientists in the Bauer & Black laboratories have evolved a perfect method and embodied it in Blue-jay.

In 48 hours, while the corn is forgotten, Blue-jay completely ends it, and forever. Hardly one corn in ten needs a second application.

The way is sure. It is easy, pleasant, scientific.

Quit old-fashioned methods. Try Blue-jay on one corn—tonight.

## Can We Explore the Sunken Continents?

(Continued from page 350)

When he emerged into the outer air he was made aware in a most unpleasant way that the "fizz" had been present—plenty of it—but kept quiet by the air pressure in the lock. Something similar happens to the man who braves the deeps. The constituents of the air we breathe are, by volume, 78.1 per cent nitrogen, 20.9 per cent oxygen, and 0.03 per cent carbon dioxide. Down 100 feet the terrific pressure of air necessary to counteract the water pressure that would otherwise crush a man to death forces the nitrogen into the blood. It does not combine chemically with the blood as is the way of oxygen, but charges fluid and tissues, ready to fizz out again, much as did the engineers' ginger ale, if the diver is suddenly returned to the normal pressure at the surface. Working at depths below sixty feet the diver becomes charged with nitrogen very much as a seltzer bottle is charged, and, just as your thumb on the valve reduces the pressure and causes the liquid to bubble forth, so the nitrogen bubbles from the blood when nature puts the thumb of reduced pressure on the diver's system. The result is the agonies of "caisson disease," or the "bends."

To avoid this danger it is necessary to bring the diver up gradually, letting the nitrogen free itself slowly from his blood. Tables have been prepared which give the time necessary for a safe ascent from various depths and lengths of stay at the bottom. For instance, if the diver has been down sixty-six feet and at work over three hours he must be held for ten minutes at a twenty-foot depth and for thirty minutes at a ten-foot depth before being finally drawn to the surface. If he should descend as far as 200 feet and stay over an hour, his stages of rest on the way up would be every ten feet from eighty up and the whole ascent would occupy three hours and fifty-eight minutes.

The greatest depth to which men have descended is in the neighborhood of 300 feet, the record made by United States Navy divers in raising the submarine "F-4." That is probably the limit of human endurance with the equipment in common use, for so great is the air pressure at that depth that the divers could remain down only a few minutes.

It is evident, then, that the problem will have to be met in some other way than by opposing air to water pressure. It has been suggested that the present diving dress be replaced by a suit of steel strong enough of itself to resist the enormous pressure of the water of the deep sea levels—the pressure increases half a pound to the square inch for every foot below the surface. Thus protected the diver could breathe air at ordinary pressure, could ascend and descend quickly, and remain indefinitely at the bottom. Of course he would have to be equipt with artificial hands, or claws, directed from within the armor, for if he should protrude his naked hand at a depth of several hundred feet

it would be at once crushed into a jelly. Inventors have already been at work along these lines. Many ingenious ideas are on file at the Patent Office and suits of diving armor of quite wonderful ingenuity have actually been made, but the men who risk their lives in exploring the drowned continents are a conservative class and inclined to look with scorn on the ideas of the surface-keeping inventor. But the inventive genius, ingenuity and daring that have added the air to man's domain will not long be turned back by the sea: some day we shall be able to defy the crushing weight of tons on tons of water and make the deep our own.

## Christian Unity at Work

While church unity is being discussed by certain denominations in both America and England, and some people are prophesying that it "won't work," Sherman, a town of about a thousand people in western New York, is successfully maintaining a Community church, three of its denominations having combined in one working unit. This Community church is really the result of the war, for while it had been talked of for four years, it took the war to bring definite action. When coal conservation was a patriotic necessity some of the business men said, "Why use coal for four separate churches to warm four separate congregations and all of them so small that one church could easily accommodate them all and still have room to spare? Why can't they worship together?" "Why not?" was the general reply; and soon the town agreed that the present system was an economic waste.

There were four churches, Methodist, Presbyterian, Baptist and Universalist. Hitherto the Universalists had been excluded from union meetings because some ministers had always objected to their presence on the ground that they were not orthodox. When they began taking stock of their community assets they found that the business and educational enterprises of the town were largely carried on by Universalists. The best farmers in the section, the highest officials in the bank and post office, proprietors of nearly all the largest business places, the head of the telephone system, the owner and editor of the local paper, the supervisor of the town, the president of the village, the member of the state legislature, the principal of the school and a large proportion of the members of the literary and benevolent societies, were Universalists. And in moral character they measured up to the highest standard. So they were included in the invitation to consider the Community church plan.

A general meeting was held in the Presbyterian church in September, 1918, where a joint committee of twelve, three from each denomination, was appointed to formulate a plan of union. The committee drew up articles of agreement which in the minds of all

covered the case, and the articles were accepted by all the churches except the Baptist.

When it came to a choice of a pastor both the Presbyterians and Methodists offered to send one of their best men, but the committee voted to select a man from a denomination not represented in the union. They decided on the Congregational and called Rev. George Wilson from a Congregational pastorate in the Middle West.

Previous to the union the average combined attendance at the Sunday services of all three churches was between 100 and 120. The average attendance at the Community church is about 300. Previous to the union the Universalists had no mid-week meeting and the average combined prayer meeting attendance at the other two churches was about 18. Now the average attendance is over 80 and runs up to nearly 200 on Church Home Night, held once a month, when a picnic supper precedes the prayer meeting. Before the union one pastor received a salary of \$800, one \$1000, and another by combining two charges, from \$600 to \$800. The Community church is paying a salary of \$2100, plus moving expenses from the West, and is not only talking of an increase in salary but of engaging an assistant pastor. The church holds its Sunday services in the Methodist building, which has the largest auditorium. The Sunday school is distributed in all three buildings. The classes are growing so rapidly that even the church kitchens are requisitioned as class rooms. The Presbyterian church is being used as a social center; it has excellent temporary equipment for that purpose.

The Sunday Schools in Sherman have been poorly attended for years. Since the union the attendance has been steadily increasing. Formerly adults seldom, and in some of the churches never, attended Sunday school; now the new adult class expects a membership of 200 shortly.

In speaking of the new undertaking, Mr. Wilson, the pastor, said:

It would take the average church two years to get into as good a condition as this one has in about three months. And we have had to work out our problems week by week because the project is so new. The people have caught the vision of a church as the center out of which come the powers for community betterment; a church which is the servant of the community, not a parasite; an institution giving out a center of interest for every department of life. At present we are distributing our work in the various buildings. We intend to make the auditorium of one of them into a gymnasium, with reading room and rooms for games. This will answer for the present, but we shall soon enlarge these accommodations.

Our plan is to erect a church, large enough for all activities, under one roof and with enough land so we can have a baseball diamond, football field and tennis court, and the various activities necessary to answer the needs of the town. Our people have learned that in Christian work as well as any other, well-directed, concentrated energy will bring results, but scattered energy accomplishes nothing.

## The MIRACLE of MILK

### Drinking Your Way To Health

You know in a general way that milk is good for you. But if you knew what a precious life-giving fluid it really is—if you knew the almost miraculous results it produces for those who drink it intelligently, you would be truly amazed. For anemia, indigestion, constipation, any difficulties of the stomach, liver, kidneys, heart or bladder, Bright's disease, rheumatism and many other ills for which physicians have no reliable remedy, the right use of milk almost invariably overcomes the trouble. For instance, feet and hands that are usually cold and clammy, become warm and life-like a few days after beginning this marvelous self-treatment. Bernard Macfadden, the famous physical culturist in collaboration with Dr. Sanford Porter, the milk diet specialist, has written a book of priceless value entitled: "The Milk Diet, How To Use It."

**You May Have It Free**

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

offer a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds is an ideal place to live in.

As a war measure, the course was reduced from three years to two years and six months. The cessation of hostilities will not end the need for nurses abroad; they will be needed, in large numbers, for reconstruction work, and for the establishment of schools of nursing in the different countries of Europe for a long time to come. We plan, therefore, to continue the course of two years and six months.

For Information write to MISS AGNES S. WARD, Superintendent

## ARE YOU A BLONDE?

If so Dr. Blackford will tell you what your mental and emotional qualities are likely to be. The same if you are a brunette.

When you really know the difference between the blondes and brunets, the difference in their characters, temperaments, abilities, and peculiar traits, you will save yourself many a mistake.

To be a good judge of other people you must know these things.

You persuade a blonde in one way—a brunette in another. Blondes enjoy one phase of life—brunets another.

Blondes make good in one kind of a job—brunets in another.

You manage blondes best, as employees, with one policy—brunets with an entirely different policy.

The history of nations of civilization is woven through and through with these fundamental differences. To know these differences scientifically is the first step in judging men and women, in getting on well with them, in mastering their minds, in making them like you, in winning their respect, admiration, love, friendship.

Dr. K. M. H. Blackford, the famous character analyst and employment expert, has put the secret into a wonderful little book entitled "Blondes and Brunets," cloth bound. Only 48 pages but packed full of valuable information for you.

Dr. Blackford has specialized on this subject for 20 years and is retained by many large corporations.

The book is fascinating. In a half hour you will get from its pages the most valuable secrets that ever came into your possession. 30 CENTS (in stamps) brings it to you by return mail. Send for it today.

## Why I Want to Get Back on the Farm

(Continued from page 354)

for things that wouldn't get by the town council at home—and yet on top of that they can get more out of an acre of ground than I ever saw in the States in my life. An engineer in our outfit was saying one day that when we build a bridge here it's a lot of steel and planks that looks so ugly the rich folks all move to the other side of town. But of course it will get you across a river, and that's what a bridge is supposed to do. But in France they build any little old bridge and you want to get a picture postcard of it to send home, it's so pretty. And my, wasn't our town proud of its reservoir! It was a black stand-pipe, and you always looked around it without seeing it if you could. But people over there use their holidays to take trips to see their reservoirs, they are so beautiful. Of course, our stand-pipe back home holds water all right, and that's what it's for. But the French do that way all the time. They seem to know that a thing can be pretty and useful at the same time. It's really queer, they take more time to look at pretty things and they work an acre harder than we do.

And horses—you know in France the state owns the stallions and in the winter brings them in and keeps them in stud and in the summer sends them out again. I went to one of the horse shows, but I'm for the American breeds. The French often drive stallions. They don't leave them standing in the stalls. Sometimes you see 'em driving a horse in a two-wheel cart. They are slow in lots of ways. Once in a while you see a four-wheel wagon and the horses ahead of one another. Same way plowing sometimes. But you ought to see the results they get. They make you think that we American farmers are about 30 per cent efficient.

Well, sometimes I wanted to quit the service and help 'em and find out how, tho I'd rather farm on a big scale and make a lot or lose a lot at once.

Is that what I meant when I spoke of learning something new? No, sir—I'm getting to it. But of course I'm glad I saw the French people farm, too. I'm aching to see how pretty I can make some little place now, and try to make the most out of my land in more ways than you can count by the bushel. But the biggest thing I got—the other fellows will tell you the same—we've talked about it—is knowing that I'm as good as the next man. No better, I don't say that, but just as good. And believe me, there are a lot of rough diamonds in the world. But when you've been up against things with a lot of 'em and you hear your officers saying that the worst enemy a man ever had is lack of confidence, well, you get over a lot of notions, and you see that it's the work you do that counts. I'm not afraid to start over right next to McGrew, now.

We had to dig in one afternoon. Blamed quick. It was like digging your own grave on a hillside, with hell breaking loose in the bargain. Right next to

me, on my right, was a boy named Leonard. I spoke to him. He didn't answer. He'd bumped off without a kick—bullet right thru his forehead. I said to the boy on my left, "Jim, Leonard's dead." He didn't believe it. He rolled him over to look, himself.

Well, it made you think, when the day's work was over. You bet it made you think.

But the hardest thing was when you were lying there to hear the fellows you loved crying out for help, out there screaming, "For God's sake, help me." And you knew that if you went out there two men would die instead of one. And then, when it was dark, you went out and found 'em dead. Fellows you'd lived with and talked with—pals. God, I wake up nights hearing those fellows hollering.

Well, you try to forget it and you can't, and the more you think the oftener you say you'll do, if you live, as much as you and one of those boys would have done, put together.

One night, going toward St. Mihiel—it was the kind of night the major spoke of on the ship—a night that makes or breaks a man. We were going along a road. The orders were to keep that road clear for the trucks and wagons. It was storming and pouring rain and so dark you couldn't see your hand before you. We stumbled along in the mud and the shells were coming so thick every now and then you'd hear a horse go down screaming. Did you ever hear a horse scream? Well, I didn't blame them for screaming that night. They had cause to scream. There'd be one shell here and one shell there, and now and then they'd dump a truck over into the ditch and bump off a man or two. It was pretty bad and we went so slow you got the feeling of something over you and around you giving you a helping hand. Believe me, it was God.

Well, it's in the big places like that that you find God, if you want to know it. God gets to be a reality, as you say. Yes, and he straightens out the kinks in your thinking. You get all straightened out inside.

Now maybe you'll say—"What's that got to do with the price of seed in Minnesota?"

Well, it's got a lot to do with everything, because you can take it from me that the fellows that did the digging and the fighting over there are the fellows that'll do the digging and the fighting over here. It's as a young millionaire, who was a private in our outfit, said one night in a dugout, "Over there you get a lifetime of growth in a month of hell."

Well, believe me, sitting on the world over there with the squareheads a few hundred yards in front of you and the birds singing on the barbed wire in No Man's Land, you do a lot of thinking, and the more you think the more you want to get back on the farm. You hear a lot about the glory and all that, and when the band plays you swell up with it. But all the same, war is a

## \$388 BUYS THIS "PRESTO-UP" Bolt-Together House

stupid business, lots of shells and gas and cooties and rats, and all that. And slaughter. I want to forget. I want to get outdoors and stay outdoors, where it's clean and fine, and I want to do some work that I can watch grow.

I remember so well how it was going over on shipboard. The fellows were all swearing and making a lot of noise, and bragging about what they were going to do to the Kaiser. None of us were thinking very far ahead of that. But coming back it was all different. The men were set. They were stern. I came back on a hospital ship, but the fellows on a ship make a lot of noise sometimes, as they do here, but I could see that we were all squaring off, you might say. Everything they said meant something. I guess every fellow had been brought up straining against things, and was wise to knowing that he had something to fight for at home, something to live for. And the important thing is that they all thought that they could do what they wanted to do when they got home. I feel as if there was nothing too big to try. I want to get outdoors and do my bit with the plow and raise a family and make some farm the finest farm on earth.

So you see I've got some things to start with that no man can take away. I got them fighting with the A. E. F. Washington, D. C.

## Hitch Your Wagon to a Gas Bag

(Continued from page 359)

one day, and the maximum speed about 50 miles per hour. In 1918, taking the German "L-70" class as an example, with 2,195,000 cubic feet capacity, the endurance at 45 miles per hour had risen to 177.5 hours, or 7.4 days, and the maximum full speed to 77 miles per hour. The ceiling, or height to which the dirigible can readily climb, had been increased from 6000 feet to 23,000 feet. The present British "R-38" class, with 2,720,000 cubic feet capacity, has an estimated cruising endurance at 45 miles per hour or 211 hours, 8.8 days, or 34 hours greater than the German "L-70" class.

So there can be no doubt that the dirigible is highly practical for peace or for certain naval and military work. As it stands today, it is sufficiently perfected for immediate commercial service; the aeronautical engineer has done his work; the dirigible only waits for the successful hand of the promoter, who has sufficient confidence, initiative and foresight to blaze the way thru the uncharted skies.

The rigid dirigible is bound to be the passenger and cargo carrying aircraft for distances of more than 1000 miles, or even more than 500 miles. Its huge carrying capacity, as compared to the very limited capacity of even the largest airplanes that may be constructed, let alone the low operating expense and the cruising safety of the dirigible which give it such a big advantage over the heavier-than-air craft, make the dirigible the logical grayhound of the skies.

## Let's Go

(Continued from page 361)

to the route. Hard-surfaced roads will be found as far as Terre Haute in a continuous ribbon. While most of the balance of the route is financed for improvement, it is, aside from occasional stretches of macadam, a dragged dirt road, good in dry weather. Substantial bridges and culverts are found along the entire route even in sparsely settled sections of the Southwest and it is well sign-posted. This route is provided with excellent hotel accommodations at most of the natural night stops. Tho open for traffic practically the entire year, except during January, February and March, the best time to travel this route is in the early autumn, leaving the East between September 1 and October 7.

THE Lincoln Highway received its prominence principally thru the fact that it was conceived and developed by some of the big men in the motor car and motor accessories industry. Thru a live campaign of publicity propaganda it is thought by many people that this route is a paved boulevard thruout its length. This is, however, far from being the case. It is hard-surfaced from New York almost to the Mississippi River with various kinds of pavements and stretches of graveled road, but many rough miles occur even on this part of the route. Thru Iowa, Nebraska and Wyoming it is graded dirt and the going depends altogether on the weather. Extensive improvements are going on in Utah and Nevada and these improvements will rob the desert region of its dangers. The main handicap of the Lincoln Highway is the fact that it is closed for more than one-half of the year by snow in its crossing of the Sierra Nevada Mountains near Lake Tahoe. However, it carries a great percentage of the summer traffic. It is 3389 miles long and well sign-posted. It may be said of the Lincoln Highway that as regards improvements it does not surpass but merely averages well with the other routes, while scenically it is inferior to them. On the other hand, it offers the least physical resistance.

The Roosevelt National Highway, "the great Midland Trail," has recently acquired its name in memory of our late "foremost citizen" and was formerly called the Midland Trail. Stretching from Oyster Bay to California with two terminals, one at Los Angeles and the other at San Francisco, it is 4100 miles long. It is hard-surfaced practically all the way to Cincinnati, from which point thru Lexington and Louisville and on to St. Louis and Kansas City it is a mixture of graded dirt, gravel and macadam. Across the plains of Kansas and thru the Colorado Mountains it is graded or graveled dirt and quite rough with few improvements from western Colorado to Salt Lake City. It coincides with the Lincoln Highway from this point to Elly and crosses Nevada on a good, natural gravel road leading thru the mining towns of Tonopah and Gold-

## Hudson River by Daylight

Now is the time to enjoy the Hudson and its early summer glory. The Day Line offers a most enjoyable route to all northern summer resorts.

### THROUGH SERVICE, NEW YORK and ALBANY

Big fast steamers. Music. Restaurant. Ideal one-day outings to Bear Mountain, West Point, Newburgh and Poughkeepsie. All through rail tickets between New York and Albany accepted.

Called by globe trotters one of the world's most homelike and attractive hotels. Reasonable rates.

Near Massachusetts Ave. Subway Station, 9 minutes from South, 11 from North Stations. Send for booklet with guide to historic Boston.

H. P. COSTELLO, Manager

## Even better than money

"A. B. A." Cheques are better than actual money for the traveler for several reasons: They are more convenient to carry—less bulky. They are safer, because no one can use them until you have countersigned them. Your countersignature on an "A. B. A." Cheque in the presence of the person accepting the cheque, is the only identification required.

They do not have to be changed into another kind of money when you go from one country into another. They are like dollars in the United States and Canada; like pounds, shillings and pence in the United Kingdom and the British Colonies; like francs in France, lire in Italy, and so on. In other words they are accepted internationally for payment of goods and services—"The safest, handiest travel funds."

Get them at your bank, or write Bankers Trust Company, New York, for booklet and information as to where they may be had in your vicinity.

Center of Business on Grand Circus Park

field. Its entrance into California is thru one of the most impressive gateways into the golden state, Westgard Pass, named after myself. Emerging from this pass, with the towering Mount Whitney, the highest peak in the United States, and the solid wall of the Sierra Nevadas dead ahead, it branches to the south for southern California and to the north for central California. It is the intention eventually to cross the Sierras thru Piute Pass and traverse the former Sequoia National Park, renamed the Roosevelt National Park, into San Joaquin Valley before branching to the south and north. At its eastern end as well as in Colorado and California this route has extraordinarily beautiful scenery.

The National Parks Highway and the Yellowstone Trail are really competing rivals thru practically the same country. They start at the same point and end at the same point. While deviating at various places they cross each other and coincide at many points. The country they traverse is of the same general character and they are both well marked along their respective alignments. Leading from Chicago to Seattle they both provide side spurs to Yellowstone Glacier and Mount Rainier national parks and cross the mountains thru the same passes. Also both follow graded dirt roads with substantial permanent improvements only near the large cities, a relatively small percentage of the whole. Their length from Chicago, which is 1050 miles from New York, to their terminus, is 2422 miles. They are strictly midsummer routes only, taking in charming lake regions in Wisconsin, traversing the wheat belt of Minnesota and the Dakotas and the Yellowstone River Valley in Montana. They are both very interesting and exceedingly scenic thru western Montana, Idaho and Washington.

The main cross connections between these routes are the Yellowstone Highway from Denver to Yellowstone Park, 638 miles, and the Old Oregon Trail from Salt Lake City to Portland, 908 miles, with extension to Seattle.

OF the routes further south, such as the Bankhead Highway, the Dixie Overland Trail, the Southern National Highway and the Old Spanish Trail it may be said that they are still in an embryonic state of development and while undoubtedly travelable cannot be characterized as standard until substantial improvements will have made them dependable for fall, winter and early spring routes.

All the transcontinental routes are tied together at their terminals by a north and south route, thus the Atlantic Highway serves as a main artery for Florida travel and the Pacific Highway as the standard route along the Pacific Coast. Besides these a half dozen north and south routes tie the Canadian and Mexican boundaries or Gulf points together. The most conspicuous in their claim for recognition among these are the Dixie Highway, the Jefferson Highway, the King of Trails and the Meridian Highway. The

Dixie Highway organization is very active and this route will eventually be the thorofare from the Middle West to Florida. However, all these routes are in their present stage of development mostly dirt roads and thus too much influenced by the varying climatic conditions prevailing between their terminals.

Truth compels me to say that as yet there is no route East and West or North and South across the United States that does not depend upon weather conditions. All indications point to rapid betterments on all the main routes and it is hoped that within five years we shall have a system of national highways so far along that at least these main arteries of traffic may be safely and comfortably traveled all the year around.

WHILE hotel accommodations are improving along most routes in proportion to the increase of traffic it is a remarkable development connected with present day long distance touring that more than 50 per cent of the travelers equip themselves more or less elaborately for camping out. Tents, gasoline cook stoves, cots, stools and tables are now made light and compact especially for the use of motorists, and are obtainable in most of the larger cities. Trailers equip for camping are frequently seen along Western roads. It has been my personal experience with trailers that they are an impediment to free locomotion, liable to breakages and that they require brakes to be in first class condition on the car going down hill while on up-grades they are a drag and require a further reduction of gearshift than would otherwise be called for. Personally I prefer a tent that can be erected speedily and the rest of the camp equipment snugged by in duffle bags, easily stowed away in any available space inside or outside the body of the car.

Repair shops and supply stations are everywhere at convenient intervals on all the standard routes, so that there is no need of carrying extra gasoline and spare parts. Every motorist into the West should, however, be equip with a desert canvas water bag and fill it at every opportunity where the water is palatable and not too hard.

New York

General Pershing tells the story of a volunteer battalion of rough backwoodsmen that once joined General Grant. He admired their fine physique, but distrusted the capacity of their uncouth commander to handle troops efficiently, so he said:

"Colonel, I want to see your men at work; call them to attention, and order them to march with shouldered arms in close column to the left flank."

Without a moment's hesitation the colonel yelled to his fellow ruffians: "Boys, look wild thar! Make ready to thicken and go left endways! Tote yer guns! Git!"

The maneuver proved successful, and the self-elected colonel was commissioned.—*Carry On.*

# What Germany Escaped

(Continued from page 357)

with this villainous substance. Its success was so great that the Germans henceforth made it their main reliance and soon the Allies followed suit. In one offensive of ten days the Germans are said to have used a million shells containing 2500 tons of mustard gas.

THE making of so dangerous a compound on a large scale was one of the most difficult tasks set before the chemists of this and other countries, yet it was successfully solved. The raw materials are chlorine, alcohol and sulfur. The alcohol is passed with steam thru a vertical iron tube filled with kaolin and heated. This converts the alcohol into a gas known as ethylene (C<sub>2</sub>H<sub>4</sub>). Passing a stream of chlorine gas into a tank of melted sulfur produces sulfur monochloride and this treated with the ethylene makes the "mustard." The final reaction was carried on at the Edgewood Arsenal in seven airtight tanks or "reactors," each having a capacity of 30,000 pounds. The ethylene gas being led into the tank and distributed thru the liquid sulfur chloride by porous blocks or fine nozzles, the two chemicals combined to form what is officially named "di-chlor-di-ethyl-sulfide" (ClC<sub>2</sub>H<sub>4</sub>SC<sub>2</sub>H<sub>4</sub>Cl). This, however, is too big a mouthful, so even the chemists were glad to fall in with the commonalty and call it "mustard gas."

The effectiveness of "mustard" depends upon its persistence. It is a stable liquid, evaporating slowly and not easily decomposed. It lingers about trenches and dugouts and impregnates soil and cloth for days. Gas masks do not afford complete protection, for even if they are impenetrable they must be taken off some time and the gas lies in wait for that time. In some cases the masks were worn continuously for twelve hours after the attack, but when they were removed the soldiers were overpowered by the poison. A place may seem to be free from it but when the sun heats up the ground the liquid volatilizes and the vapor soaks thru the clothing. As the men become warmed up by work their skin is blistered, especially under the armpits. The mustard acts like steam, producing burns that range from a mere reddening to serious ulcerations, always painful and incapacitating, but if treated promptly in the hospital rarely causing death or permanent scars. The gas attacks the eyes, throat, nose and lungs and may lead to bronchitis or pneumonia. It was found necessary at the front to put all the clothing of the soldiers into the sterilizing ovens every night to remove all traces of mustard. General Johnson and his staff in the 77th Division were poisoned in their dugouts because they tried to alleviate the discomfort of their camp cots by bedding taken from a neighboring village that had been shelled the day before.

Of the 925 cases requiring medical attention at the Edgewood Arsenal 674

## Take One!

and use it for Health and Pleasure this Summer

The out-of-door season is here. Get away to the Mountains or the Beaches. Live a while close to Nature. Breathe a deep breath of the pine woods. Get the tang of the Sea. Forget business! Welcome Peace.

The United States Railroad Administration has issued illustrated booklets, as shown here, to help you decide *where to go*. Each contains authoritative information, list of hotels, etc. Your local ticket agent will assist you; or apply to the nearest Consolidated Ticket Office; or write to the nearest Travel Bureau, naming the booklet desired.

## See America First

Your country was never in better shape to be seen than this summer.

Our national parks are wonderful.

Do you know how many there are and where they are?

Look up your own country, and see what your government is doing to make your country a better land to live in and to travel in.

were due to mustard. During the month of August 3½ per cent of the mustard plant force were sent to the hospital each day on the average. But the record of the Edgewood Arsenal is a striking demonstration of what can be done in the prevention of industrial accidents by the exercise of scientific prudence. In spite of the fact that from three to eleven thousand men were employed at the plant for the year 1918 and turned out some twenty thousand tons of the most poisonous gases known to man, there were only three fatalities and not a single case of blindness.

Besides the four toxic gases previously described, chlorine, phosgene, chlorpicrin and mustard, various other compounds have been and many others might be made. A list (*Journal of Industrial and Engineering Chemistry*, March, 1919) of those employed in the present war enumerates thirty, among them compounds of bromine, arsenic and cyanogen, that may prove more formidable than any so far used. American chemists kept very mum during the war but occasionally one could not refrain from saying: "If the Kaiser knew what I know he would surrender unconditionally by telegraph." No doubt the science of chemical warfare is in its infancy and every foresighted power has concealed weapons of its own in reserve. One deadly compound, whose identity has not yet been disclosed, is known as "Lewisite," from Professor Lewis of Northwestern, who was manufacturing it at the rate of ten tons a day in the "Mouse Trap" stockade near Cleveland.

**THRUOUT** the history of warfare the art of defense has kept pace with the art of offense and the courage of man has never failed, no matter to what new danger he was exposed. As each new gas employed by the enemy was detected it became the business of our chemists to discover some method of absorbing or neutralizing it. Porous charcoal, best made from such dense wood as coconut shells, was packed in the respirator box together with layers of such chemicals as will catch the gases to be expected. Charcoal absorbs large quantities of any gas. Soda lime and potassium permanganate and nickel salts were among the neutralizers used.

The mask is fitted tightly about the face or over the head with rubber. The nostrils are kept closed with a clip so breathing must be done thru the mouth and no air can be inhaled except that passing thru the absorbent cylinder. Men within five miles of the front were required to wear the masks slung on their chests so they could be put on within six seconds. A well made mask with a fresh box afforded almost complete immunity for a time and the soldiers learned within a few days to handle their masks adroitly. So the problem of defense against this new offensive was solved satisfactorily, while no such adequate protection against the older weapons of bayonet and shrapnel has yet been devised.

Then the problem of the offense was

to catch the opponent with his mask off or to make him take it off. Here the lachrymators and the sternutators, the tear gases and the sneeze gases, came into play. Phenyl-carbylamine chloride would make the bravest soldier weep on the battlefield with the abandonment of a Greek hero; Di-phenyl-chloro-arsine would set him sneezing. The Germans alternated these with diabolical ingenuity so as to catch us unawares. Some shells gave off voluminous smoke or a vile stench without doing much harm, but by the time our men got used to these and grew careless about their masks a few shells of some extremely poisonous gas were mixt with them.

The ideal gas for belligerent purposes would be odorless, colorless and invisible, toxic even when diluted by a million parts of air, not set on fire or exploded by the detonator of the shell, not decomposed by water, not readily absorbed, stable enough to stand storage for six months and capable of being manufactured by the thousands of tons. No one gas will serve all aims. For instance, phosphene being very volatile and quickly dissipated is thrown into trenches that are soon to be taken while mustard gas being very tenacious could not be employed in such a case for the trenches could not be occupied if they were captured.

**THE** extensive use of poison gas in warfare by all the belligerents is a vindication of the American protest at the Hague Conference against its prohibition. At the First Conference of 1899 Captain Mahan argued very sensibly that gas shells were no worse than other projectiles and might indeed prove more merciful and that it was illogical to prohibit a weapon merely because of its novelty. The British delegates voted with the Americans in opposition to the clause "the contracting parties agree to abstain from the use of projectiles the sole object of which is the diffusion of asphyxiating or deleterious gases." But both Great Britain and Germany later agreed to the provision. The use of poison gas by Germany without warning was therefore an act of treachery and a violation of her pledge, but the United States has consistently refused to bind herself to any such restriction. When the gas was first used at Ypres The Independent on May 10, 1915, called attention to these facts and in consequence suffered considerable opprobrium at the time. But the facts reported by General Amos A. Fries, in command of the overseas branch of the American Chemical Warfare Service, give ample support to our attitude:

Out of 1000 gas casualties there are from 30 to 40 fatalities, while out of 1000 high explosive casualties the number of fatalities run from 200 to 250. While exact figures are as yet not available concerning the men permanently crippled or blinded by high explosives one has only to witness the debarkation of a shipload of troops to be convinced that the number is very large. On the other hand there is, so far as known at present, not a single case of permanent disability or blindness among our troops due to gas and this in face of the fact that

the Germans used relatively large quantities of this material.

In the light of these facts the prejudice against the use of gas must gradually give way; for the statement made to the effect that its use is contrary to the principles of humanity will apply with far greater force to the use of high explosives. As a matter of fact, for certain purposes toxic gas is an ideal agent. For example, it is difficult to imagine any agent more effective or more humane that may be used to render an opposing battery ineffective or to protect retreating troops.

#### REFERENCES

A full account of the development of the American Warfare Service has been published in the *Journal of Industrial and Engineering Chemistry* in the monthly issues from January to May, 1919, and an article on the British service in the issue of April, 1918.

Lieutenant Colonel S. J. M. Auld, Chief Gas Officer of Sir Julian Byng's army and a member of the British Military Mission to the United States, has published a volume on "Gas and Flame in Modern Warfare" (George H. Doran Co.).

*This is the eleventh article in the series on Creative Chemistry, of which the first, "Nitrogen—Preserver and Destroyer of Life," was published October 13, 1917.*

#### Remarkable Remarks

NIKOLAI LENIN—Civil war writes its own laws.

LINA CAVALIERI—Consult your mirror frequently.

SECRETARY DANIELS—The German fleet should be sunk.

SENATOR LODGE—I am unable to deal in hypothetical problems.

PRESIDENT EBERT—Our Fatherland must not be brought to ruin.

CHAUNCEY M. DEPEW—Eighty-five is a very jolly time of life.

UNCLE JOE CANNON—I would let the Socialists emigrate to Russia.

MARY GARDEN—Without music people would go back to the stone ages.

PRESIDENT MCCracken OF Vassar—Beautiful girls are sometimes brainy.

VICE-PRESIDENT MARSHALL—Staid, old-fashioned, self-satisfied Presbyterian that I am.

WILLIAM JENNINGS BRYAN—The League of Nations is the greatest step toward peace ever taken in 1000 years.

CHARLIE CHAPLIN—One of my recent pictures has earned more than \$1,000,000, yet all I received was \$140,000.

THE POPE—It would be a great grief to the Holy See if in Palestine the preponderating position were given to infidels.

ARTHUR GUY EMPEY—If you feel like fighting go out and smash a Red—it is a great sport knocking them off soap boxes.

Mrs. COL. FRANK WHITE—The girl who jilts a soldier while on overseas duty for a slacker at home is the meanest slacker of all.

THOMAS JAY—Silk hats have their uses. I had filled mine with mold, planted a few ferns in it and hung it up in the conservatory.

## You can learn a lot from ADVERTISING

The main thing an advertiser wants to do is to tell you plainly just how and why his goods are worthy of your consideration. You can learn a great deal from that alone, because many things you see advertised are the things you buy and use in your regular daily life. By reading the advertisements, you can learn the names and read descriptions of the things that are best and most satisfactory.

But advertising teaches even more than that. All advertisers try to make their advertisements themselves valuable to you.

A good many people have learned a whole lot about good music, good books, good food, good clothes, ways to keep healthy, ways to live comfort-

ably, ways to keep the house and grounds looking well—they've learned all these things and many other things just by reading advertisements.

Read the advertisements right along, and you will learn a great deal that will be helpful and valuable to you as you go through life.

## DIVIDENDS

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Thirty Year Five Per Cent Collateral Trust Gold Bonds

Compans from these bonds, payable by their terms on June 1, 1919, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company, 46 Wall Street. G. D. MILNE, Treasurer.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Tuesday, July 15, 1919, to stockholders of record at the close of business on Friday, June 20, 1919.

G. D. MILNE, Treasurer.

## ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

## I. Wake Up Americans. By Edward Earle Purinton.

1. Define the term "Bolshevism" as it is used in the article.
2. Give a patriotic talk in which you explain why Bolshevism "means the destruction of both the liberty of the nation and the prosperity of the individual."
3. Name and define the types of persons allied in the Bolsheviki movement.
4. Write a character sketch of any one type of person allied with the Bolsheviki movement.
5. Give a spirited speech in which you point out the seriousness of the Bolshevist agitation in the United States.
6. Explain clearly why the expression, "War between Capital and Labor" is misleading and unjustified.
7. Ruskin, in "Sesame and Lilies," calls certain words "masked words." Define a "masked word." Explain why the following expressions are "masked expressions": "The rights of the working man," "The struggle between Capital and Labor," "The greed of the upper classes."
8. By means of specific instance develop the following topic sentence: "No strife or other serious labor difficulty ever occurred without wrong on both sides."
9. "Another source of labor trouble is the foreign element." Give a talk in which you suggest methods for reducing or Americanizing the foreign element in the United States.
10. Write an original short story in which you show the experiences of an employer who endeavors to provide for the comfort, safety and happiness of his employees.

## II. What Germany Escaped. By Edwin E. Slosson.

1. Point out the use of contrast in the beginning of the article.
2. Point out and explain every figure of speech in the first two paragraphs.
3. Explain by what means the writer makes his exposition of a technical subject entirely clear.
4. Imagine that you are speaking in your school assembly in the interests of a chemistry club. Tell your hearers why the study of chemistry is important.
5. Write an original short story in which you show how the British Secret Service obtained the lecture notes of the German staff.
6. Give a clear explanation of the following sentence, defining the logical terms: "They were right in their major premises but wrong in their conclusion, owing to the egoism of their implicit minor premise."
7. Give a short talk in which you name and explain the various types of gas employed during the war.

## III. Hitch Your Wagon to a Gas Bag. By Austin C. Lescarbours.

1. Write a short story embodying a prophecy concerning future methods of travel.
2. Prepare and present to your class a report concerning "the highly imaginative writings of Jules Verne and H. G. Wells."
3. Give an oral exposition on "Methods of Overcoming Difficulties of Air Travel."

## IV. Why I Want to Get Back on the Farm. Reported by Donald Wilhelm.

1. What advantages did the reporter gain by writing the report in colloquial language?
2. When is it appropriate to use colloquial language? When is it not appropriate?
3. Assume that the article came to you as a letter from a soldier. Write a letter in reply.

## V. News Interpretation.

1. Write a contrast between the voyage of Columbus and the recent air voyage across the Atlantic.
2. Write a paragraph of emotional and rhythmic prose—or write verse—expressing delight at the rescue of Hawker.
3. Explain to your class the importance of the recent air voyages.
4. In a single paragraph summarize the recent action of the Peace Congress.
5. Give a clear oral explanation of the present relation of the Allies and Russia.
6. Write a letter in which you imagine yourself to have been a participator in some important event of the week.
7. Write a brief of Mr. Holt's editorial article, "The Senate Versus the People."

## HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

## I. Industrial War or Coöperation—"Wake Up Americans."

1. "The new war in America is between classes." Does the author use the word classes in this paragraph in the same sense as the Socialists?
2. What, according to his analysis, is the weakness of the doctrine which the revolutionists preach?
3. "What now are some of the causes of the industrial strife prevailing thruout America?" What answer is made to this question?
4. What lesson does Mr. Purinton draw from conditions which exist in the Edison Laboratories and other similar plants?
5. What methods does he advocate for settling industrial unrest?

## II. Aerial Transportation—"Hitch Your Wagon to a Gas Bag."

1. What advantages will result if regular aerial transportation is established?
2. What are the difficulties still to be overcome before aerial transportation can be regularly established?
3. Why does the author pin his faith to the airship rather than to the aeroplane?

## III. Problems of the Near East—"The Troublous Stretch Between Constantinople and Calcutta."

1. Mark on a map lands inhabited by the different races of Turkey, such as Arabs, Syrians, Armenians, Greeks, Georgians, Turks and Kurds.
2. Mark on a map the territory claimed by England, France, Italy and Greece.
3. Give the grounds for the claims of each of these powers.
4. It is proposed that the United States become mandatory for Armenia while that nation is being organized. What special interest have Americans taken in Armenia? State reasons for and against an American mandatory.
5. Why should the Egyptians, Persians and Afghans take an interest in the fate of the Sultan of Turkey?
6. Prepare an argument in favor of making Constantinople a free city under the League of Nations.
7. Look up former wars between the Afghans and British.
8. How does the present condition of India compare with the great mutiny of 1857?

## IV. "Peace Negotiations at Versailles."

1. Draw up in parallel columns the opposing arguments of Brockdorff-Rantzau and Clemenceau and see how they balance.
2. Will Germany gain or lose by the abolition of compulsory military training? Would the same arguments apply to the proposed compulsory military training in the United States?
3. Will Germany be able to pay the indemnity imposed with her commerce curtailed and her territory reduced?
4. In what form must the German indemnity be paid since there is not enough gold in the world to cover it?
5. Debate the question: It is "an economic fallacy that the political control of a country is essential in order to procure a reasonable share of its products."
6. In the case of the Sarre valley, the population is German, but France claims the coal to cover the destruction of French coal mines by the Germans. How would you reconcile these conflicting claims? What compromise is proposed in the treaty?

## V. "European Industry Is Paralyzed."

1. Are Mr. Vanderlip's apprehensions of famine and disorders in Europe justified?
2. What is fiat money? What are the dangers of a large issue of paper currency? What was the effect in the United States after 1865?
3. Discuss the statement that England gained her supremacy in world commerce by underpaying labor. How have wages in England compared with those of Germany, United States or Japan?
4. What, according to your own observation, are the difficulties in the way of returned soldiers getting promptly down to work?

## VI. "The Senate Versus the People."

1. What has been the attitude of the Senate in regard to previous treaties?
2. Do the changes made in the peace treaty meet the objections of the senators?

## The League and the Senate

**E**NEMIES of the covenant of the League of Nations as framed by the Paris Conference are having their innings in the Senate. Under pressure of their speeches opposition to the League apparently has reached flood tide in the body that will be called upon to ratify the treaty of peace.

There are those in Washington who count the League of Nations already lost. Admittedly the morale of Senators supporting the League is at its lowest ebb. Just how public opinion out in the country stands it is not so easy to judge. Politicians returning to the capital bring contradictory reports and predictions. Letters to Senators and Representatives are about evenly divided in support of and in opposition to the League.

Calculations now being made on the chances of ratification of the treaty unamended by the Senate generally fail to reckon with President Wilson. Friends of the League look to him and to Mr. Taft with almost pathetic faith to rally the country to the support of the League when the treaty is placed before the Senate, but the enemies of the League almost wholly discount the President's influence. In the offices of all opposition Senators it is said the President has lost his former support among the people, because of his failure to use the advantage of America's position at the peace conference to confine the treaty more closely to the fourteen points.

Within each political party there is an element that is anxious to see the League of Nations made a partizan issue. Democratic spokesmen outside of Washington, believing the League certain of success, are captivated by the idea of using it as a medium of vote-getting in 1920. Senator Borah and his associates in opposition to the League are seeking to compel the Republican party to take a stand against the League, as a means of strengthening their position.

It is perhaps signifi-

cant that Senators who have been closest to the President are deploring this effort in both parties. Even more significant is the attitude of such Senators as Lodge, Penrose, Brandegee, Knox, Watson and Smoot. These men, altho solidly against it, are making no public statements on the League. Nor will they make any formal statements, they say, until the text of the treaty is in hand and they know exactly what it contains. Even at that time they will have nothing to say until Senator Knox, Secretary of State in the Cabinet of President Taft, has minutely studied the treaty from the standpoint of international law, and other Senators have considered the whole situation from the viewpoint of political expediency.

Senator Lodge has publicly stated that he believes the League of Nations is an issue rising above all questions of partizanship, but it is certain that it would be seized upon as a political issue for the 1920 campaign by which ever side could be certain that the cat would jump in conformity with its wishes.

The peace treaty will start on its way toward ratification in the Senate with a tremendous handicap. The Foreign Relations Committee, to which it will first be referred, and the Senate both are controlled by the President's political opponents. An unwavering two-thirds majority in the Senate must be in hand before the treaty can be ratified without amendment.

Underground efforts by friends and opponents of the League to clear and to obstruct the way of the peace treaty thru the Senate have been under way ever since the session opened. This would seem to indicate that neither side is so sure of its position as to believe that jockeying for advantage is unnecessary.

In the organization of the Senate the League of Nations issue played a dominant, but silent, part. Opponents and supporters of the League both sought to use the contest

Balladeers in Blues and Stripes

Homeward bound Yanks—Eyes Right!

of Senate Progressives against the nomination of Senator Penrose for the chairmanship of the Finance Committee to their advantage.

Senator Borah, leader of the Progressives, likes the ideas of which he regards Senator Penrose as the symbol not at all, but he likes the League of Nations even less. When Senators Harding of Ohio, New of Indiana, Moses of New Hampshire and Johnson of California were named for membership on the Foreign Relations Committee on the basis of their rock-bottom opposition to the League, the Progressive opposition to Penrose dissolved. It was a later incident that forced the Progressives to active support of Senator Penrose.

Senator Gilbert Hitchcock of Nebraska, chairman of the Foreign Relations Committee during the last session, has presidential aspirations. He has calculated that the President will not run for a third term, but that the candidate favored by the President will get the Democratic nomination. Senator Hitchcock lost the President's favor thru his activities in investigations conducted by the Senate Military Affairs Committee while the war was in progress. The best way to regain and forever hold the President's favor, he believes, is to be the man who puts the League of Nations covenant thru the Senate. Accordingly he has pickt himself for that job.

Believing the Progressives were unalterable in their opposition to Senator Penrose, Senator Hitchcock went to Senator Lodge with a proposal to insure the success of Senator Penrose's candidacy in spite of them by Democratic votes, if in exchange Senator Lodge would agree to increasing the membership of the Foreign Relations Committee to eighteen, making room for one more Democrat.

The situation in the Foreign Relations Committee on the League of Nations was: Nine Republicans against; one Republican (Senator McCumber) for; seven Democrats for—giving a majority of one against. If another Democratic member was added to the committee, Senator Thomas, an opponent of the League, was in line for the place. But if, instead of Senator Thomas, Senator Robinson, an ardent supporter of the League, could be

given membership on the committee, the vote on separating the covenant from the treaty proper or upon radical amendment of the treaty would stand 9 to 9. On a tie vote in committee, as in the Senate, a proposition to alter fails.

Senator Borah was told of Senator Hitchcock's proposal. Accordingly, when Senator Hitchcock forced a separate vote on the chairmanship of the Finance Committee in the Senate the Progressives voted with wry faces for Senator Penrose.

In spite of the success of League opponents in packing the Foreign Relations Committee against the League, and in spite of Senate polls which show that they control well over one-third of the Senate membership at present, unbiased observers, who have considered all the facts, are of the opinion that these men are engaged in a losing fight.

The "signature" clause of the peace treaty, reported to provide that when three nations have approved the treaty with Germany they shall be considered at peace with that country gives a stronger lever for coercion of the Senate by business and industrial interests. Long debate in the Senate after three of the Allied nations had signed the treaty and resumed commercial relations with Germany would cause immediate pressure to be brought against the Senate to ratify the treaty at once, without change.

While unwilling as yet to bank upon it, far-sighted men are making the prediction that opposition to the treaty and the covenant will collapse when apparently at its maximum strength, and that the treaty will be ratified without radical amendment.

## The German Protest

ON May 29, Count von Brockdorff-Rantzau delivered a general reply, declaring that the peace terms proposed are not in accordance with the principles agreed upon, but represent "the victorious violence of our enemies." The exactions are more than the German people can bear. The indemnity demanded would exceed many times over the total amount of Ger-

The Edison Medal, awarded annually by the American Institute of Electrical Engineers "for meritorious achievement in electrical science," went this year to Benjamin G. Lamme, chief engineer of the Westinghouse Company. Mr. Lamme is the man who "harnessed Niagara" and who designed the equipment used in the electrification of the Pennsylvania Railroad and some of the other railroads in the United States

THE NEW MAP OF GERMANY

This is the official map showing the changes proposed by the terms of the treaty dictated to Germany. Alsace-Lorraine is to be ceded to France, Malmedy and Eupen are to be ceded to Belgium. The Sarre Valley, containing coal mines, is to be administered by France for fifteen years under supervision of the League of Nations. Danzig is to be made a free city under Polish administration to provide an outlet for Poland. The territory of Posen and West Prussia, largely peopled by Poles, is to go to Poland, and the inhabitants of the southern part of East Prussia are to vote on joining Poland. Schleswig is to vote in three zones successively as to annexation to Denmark

man state and private assets. No limit is fixt and the German people would thus be condemnd to perpetual slave labor.

In spite of the exorbitant demands, the reconstruction of our economic life is at the same time renderd impossible. We must surrender our merchant fleet. We are to renounce all foreign securities. We are to hand over to our enemies our property in all German enterprizes abroad, even in the countries of our allies. Even after the conclusion of peace the enemy states are to have the right of confiscating all German property. No German trader in their countries will be protected from these war measures. We must completely renounce our colonies, and not even German missionaries shall have the right to follow their calling therein. We must thus renounce the realization of all our aims in the spheres of politics, economics, and ideas.

Even in internal affairs we are to give up the right to self-determination. The International Reparation Commission receives dictatorial powers over the whole life of our people in economic and cultural matters. Its authority extends far beyond that which the Empire, the German Federal Council and the Reichstag combined ever possest within the territory of the Empire. This commission has unlimited control over the economic life of the state, of communities, and of individuals. Further, the entire educational and sanitary system depends on it. It can keep the whole German people in mental thralldom. In order to increase the payments due, by the thrall, the commission can hamper measures for the social protection of the German worker.

Her chief waterways are subjected to international administration; she must construct in her territory such canals and such railways as her enemies wish; she must agree to treaties, the contents of which are unknown to her, to be

concluded by her enemies with the new states on the east, even when they concern her own functions. The German people is excluded from the League of Nations, to which is intrusted all work of common interest to the world.

Thus must a whole people sign the decree for its own proscription, nay, its own death sentence.

The German delegation protests against the cession of territory in West Prussia, Pomerania and Silesia which has been inhabited by Germans for hundreds of years. The Sarre valley is to be detachd and the way preparad for annexation to France, "altho we owe her debts in coal only, not men." The Rhenish territory is to be occupied for fifteen years and even then not restord unless the Allies wish it.

Count von Brockdorff-Rantzau asks for oral discussion of the terms according to the promise of "open covenants of peace openly arrivd at," and presents nine counter-proposals as the utmost that Germany can concede:

1. Germany offers to lead in disarmament by abolishing universal service and reducing her army to 100,000. But she stipulates that a genuine League of Nations come into being with power to enforce its will and protect the frontiers of its members and that Germany be admitted to the League with equal rights.

2. In territorial questions Germany takes her position unreservedly on the Wilson program. She renounces sovereignty over Alsace-Lorraine, but asks a plebiscite. She will give up such part of Posen as is Polish and grants to Poland free access to the sea. She will give the Danish districts of Schleswig on the basis of a plebiscite, and asks for the same right of self-determination for the Germans

of Austria and Bohemia. She will subject her colonies to the League of Nations if she is made the mandatory.

3. Germany will pay \$25,000,000,000; one-fifth of it in five years, the rest in annual instalments.

4. To make good the destruction of mines in France, Germany will deliver 20,000,000 tons of coal annually for the next five years and up to 80,000,000 tons in the next five. Germany will also deliver dyes and other coal tar products.

5. Germany offers to put her entire merchant tonnage into a pool of the world's shipping and will build more than the tonnage demanded.

6. Germany will replace river craft destroyed in Belgium and France.

7. Germany will concede participation in industrial enterprises, especially coal mines.

8. Germany wants the equal rights of workers of all countries recognized in the treaty.

9. Germany asks for a neutral and impartial inquiry into the responsibility for the war and culpable acts in conduct.

## The Austrian Peace Terms

**T**HE first step in the dissolution of the old Austro-Hungarian Monarchy was taken on Monday, June 2, when the representatives of the new Austrian Republic received the treaty dictated by the Allied and Associated Powers. The scene was the museum of prehistoric relics in the ancient castle of Francis I at St. Germain-en-Laye, thirteen miles from Paris. Red-covered tables had been arranged in a rectangle, with Premier Clemenceau, President Wilson and Premier Lloyd George at the head, the other delegates seated on either side of the lateral tables, the six Austrian delegates at

the foot, and the numerous secretaries and attachés crowded in wherever they could find standing room. Mr. Wilson was a few minutes late because the tire of his automobile was punctured in passing thru St. Cloud and he had to commandeer a passing army car.

It was then a little after noon when the Austrian plenipotentiaries were ushered in. The Allied delegates rose to receive them and Premier Clemenceau, without preliminary or commentary, told them that the treaty was not entirely completed, but that he would deliver for their consideration such sections as had been prepared and should expect their reply in writing within a fortnight.

Dr. Karl Renner, the Austrian Chancellor, then rose and spoke in French in a very conciliatory manner, beginning with an appeal for a peace of right and justice on the principles of President Wilson and expressing gratitude for the generosity of the Hoover Commission, which had saved the Austrian people from starvation. The new republic, he said, was free from the unfortunate tradition of the Hapsburg monarchy and "from the horrible crimes of 1914," and desired to take her modest part in the League of Nations. Chancellor Renner created a more favorable impression than Count von Brockdorff-Rantzau when the German peace terms were delivered, for the German delegate remained seated, spoke in German, and accused the Allies of sharing in the guilt of the war.

Only a very brief abstract of the Austrian treaty has been given out, but its terms seem to be similar to those

THE DISSOLUTION OF AUSTRO-HUNGARY

The heavy dotted line bounds the old Austro-Hungarian Monarchy. The light dotted lines show the several provinces. The heavy solid lines bound the new states formed by the Paris Conference as follows: 1. The Republic of Austria. 2. The Republic of Hungary. 3. The Republic of Czechoslovakia. 4. Austrian territory annexed by Poland. 5. Hungarian territory annexed by Rumania. 6. The Serbo-Croat-Slovene State (Yugoslavia). 7. Austrian territory annexed by Italy.

# The Nancies at the Azores

*U. S. Naval Air Service, from Central News*

Badly battered by taxiing thru heavy seas the "NC 3," flagship of the Nancies, finished her flight to Porto Delgada on the surface of the water, trailing her broken wing behind her. But the trip was valuable to aviation in proving the safety of the crew in spite of serious accident to the plane

*Photographs from Levick*

Champion trans-Atlantic flyers of the world, the crew of the "NC 4" reporting to Admiral Jackson at the Azores. Left to right they are: Lieutenant Stone, Chief Rhoades, Lieutenant Hinton, Ensign Rodd, Lieutenant Breese, Commander Read and Admiral Jackson. In the photograph above is Commander Towers, chief of the Nancies, telling Captain Wortman of the fight to bring in the "NC 3"

*Press Illustrating*

Paying discharged soldiers and sailors to find jobs is the ingenious scheme worked out by the Knights of Columbus to relieve the unemployment situation in New York. The men, arranged in teams of ten, each with a captain, set out to interview employers and make a systematic survey of possible jobs thruout the city

of the German. The preamble to the treaty recognizes the Republic of Austria as a new and independent state and declares that from the moment when the treaty comes into force official relations will exist between the Republic and the Allied and Associated powers. As in the case of Germany, the treaty comes into force when signed by Austria and any three of the five principal powers.

The frontiers of Austria are to remain substantially where they were on the Bavarian, Bohemian and Hungarian sides. On the south a new line is drawn from Reschen Pass on the Swiss frontier, following the watershed thru Brenner Pass and eastward to the Hungarian frontier north of Marburg. This gives the Trentino and southern Tirol, Carinthia and the lower part of Styria to Italy and to Yugoslavia. The map on page 391 shows the probable outlines of the new states, tho the boundaries are not all defin'd. The province of Salzburg in western Austria asserts its independence of Vienna and the Crownland of Vorarlberg, comprizing a thousand square miles, next to the Swiss frontier, has voted by 45,500 to 11,000 in favor of annexation to Switzerland. But both of these are included by the treaty in the Austrian Republic.

All the Austro-Hungarian warships, submarines and river gunboats are to be surrender'd, together with all naval arms and ammunition. Austria is not allow'd to buy or build any submarines, even for commercial purposes, or to possess any naval or military air forces.

Since it is impossible to dissect Austria-Hungary in any way so as to segregate its entangld nationalities, the provisions for the protection of the rights of minorities are made especially definite and stringent:

Austria undertakes to bring her institutions into conformity with the principles of liberty and justice and acknowledges that the obligations for the protection of minorities are matters of international concern over which the League of Nations has jurisdiction. She assures complete protection of life and liberty to all inhabitants of Austria, without distinction of birth, nationality, language, race or religion, together with the right to the free exercise of any creed. All Austrian nationals without distinction of race, language or religion are to be equal before the law.

No restrictions are to be impos'd on the free use of any language in private or public and reasonable facilities are to be given to Austrian nationals of non-German speech for the use of their language before the courts. Austrian nationals belonging to racial, religious or linguistic minorities are to enjoy the same protection as other Austrian nationals, in particular in regard to schools and other educational establishments and in districts where a considerable proportion of Austrian nationals of other than German speech are resident; facilities are to be given in schools for the instruction of children in their own language and an equitable share of public funds is to be provided for the purpose.

These provisions do not preclude the Austrian Government from making the teaching of German obligatory. They

are to be embodied by Austria in her fundamental law as a bill of rights and provisions regarding them are to be under the protection of the League of Nations.

It will be observ'd that the Austrian, like the German treaty, postulates the existence of a League of Nations to carry out its provisions.

## A Rhine Republic

THE movement for the alienation of the Rhenish provinces from Germany has suddenly, on June 1, culminated in a declaration of independence. At Wiesbaden, now occupied by French forces, a meeting of representatives of Rhenish Prussia, Old Nassau, Rhenish Hesse and the Palatinate was held and a Rhenish republic proclaim'd. Dr. Dorten, a former state's attorney, assum'd the office of provisional president and telegraph't to Paris the decision of the delegates, adding:

They do not propose to shirk the obligations connected with the work of restoration in Belgium and northern France. They implore the protection of the French authorities against their opponents and beg the privilege of coming to Paris for negotiations. The majority of the population is with us.

Attempted rebuttals of this last statement were suppress'd by the French and American military authorities. A German delegation waited upon Colonel Pinot, the French commander at Wiesbaden, asking for an opportunity to demonstrate to the French Government that the entire population of the provinces was oppos'd to the secession. But Colonel Pinot declar'd that it was too late for such a procedure and that any cities that did not conform with the new order would be cut off from food supplies. In Coblenz, which is under American rule, the railroad and street car employees struck as a protest against the movement, but the American military authorities notified the strikers that unless they return'd to work at once they would all be deported, consequently the strike was called off. The *Coblenz Volkzeitung* was suspended for two days for publishing an article asserting that the French had a hand in the secession movement.

The German Chancellor, Philipp Scheidemann, has declar'd all official acts of the new government void and order'd the prosecution of Dorten and other members of his government for high treason. The German Armistice Commission has handed Marshal Foch a note complaining of the threats and actions of Colonel Pinot, saying:

This action on the part of the French occupation authorities is in sharpest contradiction to the armistice conditions and represents the grossest violation of obligations legally undertaken. The German Government makes the sharpest protest against this behavior.

Altho no evidence has been produced that the French Government is aiding the movement, it is no secret that

Mo	Tu	We	Th	Fr	Sa	Su
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28

This is all that we'd need in the way of a calendar if the American Equal Month Calendar Association accomplishes its plan of having thirteen months in the year, and all the months exactly alike. Wouldn't it be convenient to know that the first is always Monday?

the French sympathize with it. One of their aims in the war was to secure control of all the territory on the left or western side of the Rhine River and a secret treaty was concluded with Russia, without even the knowledge of the British Government, by which this territory was to be taken from Germany and placed for an indefinite period under French military rule. In exchange for this the Czar was to remain ruler of Poland. With the collapse of Russia this scheme fell thru. Poland then got a chance to become free, while France was deprived of support for her "buffer state" plan. Foch was grievously disappointed when even Clemenceau refused to back him in this project, and he voiced a protest against the eventual evacuation of the Rhine valley in the plenary session of the Conference. It is probably on account of the disappointment of the French over the Rhine question that Wilson and Lloyd George were induced to promise to get thru Parliament and Congress a special agreement to defend France against future invasion from this quarter.

The territory over which the French, according to secret treaty with Russia, planned to extend their control, is now occupied only in part by French troops, for American and British forces hold other sectors, and in any case the occupation is intended to be only temporary. But if the Germans of this district voluntarily secede the aim of the French for a buffer state may be achieved.

## The Need of Europe

**D**ETAILS of the picture of want and suffering which Mr. Vanderlip painted in his frank statement reported in these pages last week have been filled in by two other returning travelers. Colonel Homer Folks has been in charge of civilian relief work for the American Red Cross in France for the past two years and has recently taken a trip thru all the Mediterranean countries, and Barry C. Smith has been the director of the National Investigation Bureau, which has been a clearing house of information for the millions of Americans who have given hundreds of millions of dollars for the relief of Europe since 1914. Mr. Smith brought back with him a detailed report of a survey of conditions which has been made for his bureau during the past three months by W. Frank Persons, formerly director-general of civilian relief for the Red Cross in Washington. His report sums up the whole situation as showing that the need for food will continue everywhere in the devastated area until next fall; the necessity for health work much longer. Just now there is the gravest apprehension of a great outbreak of typhoid fever. The familiar impression in America that needs have decreased is so inaccurate as to be tragic. As a matter of

fact, American relief will be needed in almost every country of continental Europe until next spring; in some cases it will have to be more generous than during the war; in some countries the need will continue for several years. "It is imperative that the American people realize the duty that lies before them."

The report finds that in France food and clothing will be needed for the devastated area until fall, and in some localities for several years to come. But a beginning has been made in selling the necessary articles as the people gradually recuperate. This policy is recommended as being more considerate of the self-respect of the peoples aided, and because it makes the relief funds go farther.

In Belgium the situation is much the same as in France, special food for undernourished children being especially needed. The great problem in Belgium lies in the reestablishment of the manufacturing industries without which its people cannot even make a beginning at self-support.

Poland is hardest hit of all the countries studied. It has been difficult of access thruout the war, so that comparatively little relief has gotten thru, and the resulting suffering is said to be beyond description. Out of a population of thirty-eight million, one-third are reported to be sick. There are 250,000 cases of typhus fever and four million of tuberculosis.

In the Balkans the description is described as similar to that in Poland, tho the food situation should be in hand by next fall. Serbia has been particularly hard hit and has lost half its population. In some communities no children under three years of age are to be seen.

In Italy the special need is for milk, of which the whole country has practically no supply, and of care for great numbers of war orphans.

As to Russia, little information was obtainable beyond the general understanding that there is widespread and acute suffering, complicated by the difficulties of transportation, and, of course, by the political situation.

## The Liberty Calendar

**N**OTHING is sacred to the reformer. Having tampered, apparently successfully, with the rising of the sun and the going down thereof, he now proposes to reorganize the years, the months and the weeks. A group of fifty business and professional men of Minneapolis have organized an association whose purpose is to bring about the adoption of what they call the Equal Month Calendar. There is a certain poetic justice in the plan that they propose, since the effect of it would bring the poor, despised little month of February into its own. If the Liberty, or Equal Month Calendar were to be substituted for the Gregorian calendar as that was substituted for the Julian calendar in the middle of the eighteenth century, the year instead of being composed of twelve months of varying lengths, would be composed of thirteen months of precisely equal length.

Each month would contain twenty-eight days. Each month would commence on Monday and contain precisely four calendar weeks. Under the new plan there would be one extra day in the year. Instead of adding that to any month, it would stand by itself as New Year's Day. In each leap year there would be another additional day which would be called "Correction Day" and be placed between December 28 and New Year's Day. The new month which would have to be added to make thirteen would be placed after January and February and be called Liberty. Since it is impossible to make four equal seasons out of thirteen months the summer season would be given four months and the other seasons remain as before. It is proposed that

# The American University on the Rhine

Education, it seems, follows the flag. For the largest American university is not in this country at all, but in Germany, where 20,000 soldiers of the American Army of Occupation are attending classes in everything from the A. B. C.'s to *nouveau art*. Colonel W. C. Short is the army head of the university. The preliminary work of its organization was done by the Army Educational Commission of the Y. M. C. A.

Evidently it wasn't fraternizing to borrow this sedate German youngster as model for one of the art classes at the American University on the Rhine. The university curriculum holds the record for distance; it tries to give the men an opportunity to learn anything they need for civil life. The only compulsory classes are in English for illiterates and for foreigners.

Photograph from "Caption Dispatches," A. E. P.

An idle tractor becomes a classroom in the A. E. F. system of education. "Gas engines" is one of the most popular electives. In one district, fairly average, the enrollment showed the following distribution: gas engines, 199; journalism, 19; electricity, 52; art, 55; public speaking, 17; economics and civics, 68; agriculture, 36; English, 119; modern history, 51; languages, 207; mathematics, 171; commerce, 510; elementary grades, 477.

A German school by day and an American university by night. This is one of the chief buildings in Coblenz where classes are held under the joint administration of the army and the Y for soldiers of the American Army of Occupation. The classes are strewn out all along the valley of the Rhine, all thru the bridge-head country, wherever troops are billeted. In the smaller villages any available hall or tavern is made to do service.

Easter Sunday shall be observed on a fixed date instead of as a movable feast, as is now the case.

A bill for the adoption of the Liberty Calendar was introduced in the last Congress and is to be re-introduced at the present session. The bill provides that the change to the new form shall take effect on the first day of the year 1922. This would make the transition easy, as that day is Sunday. Under the new calendar it would be made New Year's Day and the next day would be Monday, January 1. Thereafter, at the end of each four weeks a new month would begin, and this would continue to be the regular order, except for the Correction Days, which would come in every leap year until the end of time.

Under the Liberty Calendar one would be able to tell in an instant on what day of the week any future date would fall, whether that date were a week hence or a thousand years hence. Under the new form there would never be five Sundays in a month, nor five pay days in a month, nor five publication days in a month for a weekly periodical. Every holiday and every anniversary would always fall on the same day of the week in each year. The Fourth of July, Victory Day, which is of course November 11, Thanksgiving Day, and Christmas would all come on Thursday.

A promissory note given for any specified number of weeks, months or years, would always mature on the same day of the week on which it was given. Computation of interest would be immensely simplified. The wage relation of employers and employees would be made vastly easier.

These are some of the contentions of the group of hard-headed practical men of Minneapolis who are pushing this startling reform, which has been proposed before in this and other countries, but never taken seriously. Like all good reformers they do not set forth with equal prominence the disadvantages which will promptly

appear to any one who is interested to think about the matter. They do contend, however, that most of them are merely sentimental and that they would soon disappear from the public mind if the new plan were to be adopted.

## A Mysterious Proposal

FROM a bankrupt corporation with its stock selling at less than a dollar a share, the International Mercantile Marine Company during the war years grew to a most prosperous enterprise with the same stock selling at over fifty dollars. This is the corporation in whose ownership and operation were combined a group of old steamship lines, including the American Line, the Red Star Line, the White Star Line, the Atlantic Transport and the Dominion Line. Now—after so much has been said and printed about maintaining the position of the United States as a maritime power, about increasing our merchant fleet in order to compete with the British trade interests—the directors of our largest marine company are quite willing to sell out to a British syndicate for approximately \$125,000,000.

At the end of 1914 the common stock of this company sold on the New York Stock Exchange at 62½ cents and the preferred at \$3; this year, the same stocks sold, at their highest point, for \$58.37 and \$128.50 respectively. In the middle of 1915, when the stocks were still selling at nominal prices, a statement was issued by the company setting forth that in the six months ended June 30 of that year its net earnings had been \$11,000,000, as compared with a deficit of \$1,000,000 in the eight months ended August, 1914.

In April, 1915, following a default in the payment of interest on the company's bonds, a receiver was appointed for the company and a plan of reorganization projected for the benefit of the bondholders. If the plan had been adopted, it would probably have destroyed the equity which now remains for the stockholders. However, after the earning capacity of the company became apparent, a syndicate secured control of a large part of the stock with the result that the reorganization as originally planned did not materialize. The stocks remained in their original status and the company continued to prosper thru the transportation of munitions and food to our allies.

The president of the company recently announced that the directors had adopted resolutions to sell the company's British subsidiaries, to dissolve the company and to distribute its assets. It seems perfectly clear that the company is to go out of business. The resolution must, of course, be ratified by the stockholders. There may be little hesitancy on the part of those who paid a few dollars for their stock except for the fact that they will have to pay a large income tax on the profit. Those who paid high prices on the assumption that the company was to continue in business, and that dividends might be paid on the common stock, may take a different view of the situation. They may desire to ask why the company should be dissolved at a time when everybody is expecting so much from foreign trade.

Aside from the ships owned by the British subsidiaries, the company owns nine steamers under the American flag and two under the Belgian flag, of an aggregate of 130,000 tons. The president of the company is reported to have said that in view of the national character which shipping had attained during and since the war, it may be found undesirable for an American company to operate ships under a British flag or thru a British company. If the British ships must be sold, stockholders will naturally wonder why an American company which has made such a signal suc-

Western Newspaper Union

A league of all the Red Cross Societies, except those of the Central Powers, was formed recently and chose as its Director-General Sir David Henderson, of the British army.

cess from a bankrupt structure should not continue in business with its common stock capitalization and such other securities as might be issued, and perhaps be able to pay dividends in the near future. This would be better than liquidating at fifty dollars a share.

## After Forty-One Years

**T**HE adoption by the United States Senate of the resolution submitting the woman suffrage amendment to the states for ratification ends a Congressional fight for the recognition of the political equality of women that has lasted forty-one years. The Susan B. Anthony amendment was first introduced in 1878. It reads now as it did then:

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of sex.

The Congress shall have power, by appropriate legislation, to enforce the provisions of this article.

At the last session the Senate refused to pass the resolution by a single vote, altho the House adopted it by precisely the two-thirds vote necessary.

The final vote in the Senate was 56 in favor and 25 against. The upper house therefore gave two more than the required two-thirds vote, while in the House the other day there were 42 votes to spare.

The Republicans have the honor of having given the preponderance of support to the suffrage resolution in both houses. In the Senate 36 Republicans voted for it and 6 against it; while 20 Democrats voted for it and 17 against it.

The next problem that confronts the cheerfully indefatigable suffrage leaders is that of ratification. Thirty-six state legislatures must give their approval before the amendment becomes effective. The suffragists are naturally anxious that all the women of the country shall be able to vote at the Presidential election next year. Whether that will come about or not will depend on whether enough states will have special sessions of their legislatures to make up the necessary total.

In any case a vigorous campaign is to be undertaken by the suffragists with the slogan, "Extra sessions and immediate ratification." Except in the minds of some case-hardened opponents of any extension of political equality to women there is no question that ratification will come ultimately. The tide is setting that way with an irresistible sweep. Already in twenty-eight states women vote either for state officers or for President or for both. The forward charge is over; the enemy's main trenches are taken. It only remains to "mop up."

## A Church Without a Theology

**A**N interesting experiment, to say the least, in church development has been undertaken by the congregation of the Church of the Messiah in New York City. Under the leadership of Rev. John Haynes Holmes, its pastor, it has ceased to be an exclusively Christian church—Unitarian church would perhaps be a designation more satisfactory to the unorthodox—and becomes a community church. In fact, that is its new name—the Community Church of New York. The new name was chosen by a referendum vote of the members of the congregation.

The change is more than an alteration of name. It is the sign of a wide variation in method and purpose from the rank and file of the churches of Christendom. Dr. Holmes has set forth the facts frankly. He could not have done otherwise, for frankness and fearlessness are bred in his bone. He speaks thus of the new venture:

The old name had long since lost its meaning, at least

© Clinedinst, from Central News

School teachers all over the United States are forming trade unions chartered under the American Federation of Teachers of which Charles B. Stillman, of Chicago, is president. The teachers' unions are affiliated with the American Federation of Labor and with the National Woman's Trade Union League and they are demanding fair working conditions and fair salaries for teachers

for our people. To many it had a sentimental value, made precious by long and tender association, but it meant nothing to any of us in terms of spiritual thought and work of our time, and to the public at large it was a source of confusion and error. The change to the Community Church of New York is simply an endeavor to interpret the free, democratic, social religion to which we are committed, and to give public guarantees of our determination to live out the consequences of this religion to the very end.

By this action this church has now completed a great work of reorganization. I have left Unitarianism, cut myself off from all denominational connections of every kind, that I may preach a universal, humanistic religion which knows no bounds of any kind, not even Christianity.

We have done away with assessments, pew rents, etc., and thus placed the support of the church on the absolutely democratic basis of free voluntary subscriptions. We have rewritten our covenant, eliminating every last vestige of theology, thus relegating all matters of belief to private individual opinion and putting membership in the institution on an out-and-out citizenship basis. Any person who is a part of our great American community is welcome to our church, whether he be rich or poor, black or white, Christian, Jew, Hindu, or Parsee.

By adopting finally this new name, we put the social democratic stamp indelibly upon our work. We now belong to the community, to take rank with the school, the library, the community center, as a public institution for public service. Our work of reorganization complete, we now turn to the greater task of making our church effective in the democratic life of America.

There need have been nothing startling in the action. This is the final logical phase in the evolution of the church over which Dr. Holmes has exercised a powerful leadership. It is several years ago that he said publicly, "We need a new church, a church that shall be devoted to truth and not to tradition, that shall be moved by a spirit of freedom and not of authority, and that shall be dedicated to justice and not to charity."

The experiment of this nearly century old congregation cannot be dismissed with an anathema or put out of court with a gesture. Its leader is too sincere, too ear-

nest, too intelligent, however misguided he may be felt to be in this extremist venture of his. It would be the part of broad-minded wisdom to wait and see what the fruits will be.

## Why Is a Volcano?

EVERY so often we are reminded by the bursting forth of a volcano that peace is no more permanent inside than outside our globe. Recently two peaks on opposite sides of the world declared war at almost the same time. First, Kalut in central Java let go with a terrific blast (on May 20) that laid waste twenty villages and piled up a death list of 15,000. Two days later Stromboli, off the Italian coast, erupted, but fortunately the casualties were few.

Volcanoes are one of the things concerning which our knowledge is conspicuous by its absence. In fact, we have yet to learn most of the secrets concealed in the earth's interior. We do know that the globe is not, as the schoolbooks of our father's day taught, "a molten mass," but is undoubtedly a very dense solid, more rigid than steel. We know it because of the earth's calculated weight, the effect on it of the pull of sun and moon, and in various other ways.

No, our interior is not a molten mass, but it is sizzling hot in spite of the years it has had in which to cool off, and when by any chance the tremendous weight of the upper crust is lessened the solids below the spot change quickly to liquids and even to gas.

What causes eruptions? As in most things about volcanoes, we have to answer that we don't know exactly. The best accepted theory is that, as the earth's surface wrinkles in response to the shrinking effect of cooling age and warps to the "earth tides" which cause a twice-a-day rise and fall of about twelve inches in the surface beneath our unconscious feet, the pressure on certain spots is lightened enough to cause great masses of the interior rock to melt. Then, of course, we have the in-

International Film

Our only volcano going into action—Lassen Peak in the eruption of 1915. This photograph was taken from a point five miles distant

gredients of a volcano ready to go to work.

How the liquid rock (magma) gets out is another of the things we do not know. Probably it is squeezed up thru a fissure in the brittle crust—there are many of them—and at the top of the magma column great masses of gas collect, becoming very hot under the pressure below and above.

These hot gases eat thru the adjacent rock and form a vent for the magma. It may flow out quite peaceably, as in the volcanoes of Kilauea and Mauna Loa in Hawaii, or burst forth in great explosions such as those which took place recently at Kalut and Stromboli.

Most of our small store of volcanology we owe to the studies made at the Hawaiian Volcano Observatory by Dr. T. A. Jaggar and his assistants.

They have carried on an extended series of observations at the lava pit of Maelmaumau, and by charting the lava tides there Dr. Jaggar was able to predict the eruption of Mauna Loa three years ago. It is possible that in time man will surprise all the secrets of the earth's volcanoes and that with volcanology ranking as an exact science much loss of life and property will be averted.

In this country we have only one active volcano, Lassen Peak, southernmost of the Cascade Range in California. After sending up warning vapors in 1914 Lassen produced two very respectable eruptions in 1915, and over 200 lesser bursts have been reported since. But now Lassen seems to be losing its grip, and some observers predict that it will soon retire to the inactive list.

During its period of most intense activity Lassen had the somewhat unusual distinction among volcanoes of being reported by forest rangers as guilty of setting two forest fires, and in the great eruption of 1915 a sudden blast of burning gas melted the deep snow on the northeast side of the peak, causing a flood that destroyed everything over a mile-wide path extending ten miles down the mountain slope.

## Remarkable Remarks

ELSIE FERGUSON—I shrink from publicity.

ACTRESS GLORIA SWANSON—I am always broke.

THOMAS JAY—No man looks a hero in a silk hat.

CHARLIE CHAPLIN—I'm not crazy about money.

JAMES M. BECK—The American spirit is changed.

CHOLLY KNICKERBOCKER—There has long been a friendly rivalry between St. Thomas' Church and St. Bartholo-

mew's as to which is the more popular edifice with the exclusive brides.

REPRESENTATIVE GILLET—President Wilson is an egoist.

ROBERT LYND—Bernard Shaw is the pickpocket of illusions.

MARY GARDEN—Every one should have an ethical point of view.

MINNIE MADDERN FISKE—Our most clearheaded men are vegetarians.

LUKE MCLUKE—Any man who has tried to split kindling wood with a hatchet can tell you that George Wash-

ington was a wall-eyed liar when he claimed that he chopped down a cherry tree with one.

MARSHAL JOFFRE—Without America as an essential part the League would have no serious results.

E. T. RAYMOND—There are certain things that England does very well and Mr. Asquith is one of them.

ADMIRAL SIMS—If I believed everything that is said about me, I would be bound to consider Nelson, John Paul Jones and Decatur small potatoes when compared to me.

# The United States Among the Nations

An Editorial

By Franklin H. Giddings

THE "Big Four" is the phrase that has appeared in newspaper headlines more often than any other since the peace deliberations at Paris got fairly under way. In view of all the proclamations and protestations of the democratic peoples, whose prowess dethroned the emperors and put their militarism out of business, it is a bit odd, as we all admit, that the phrase refers primarily to four individuals, rather than to four governments, not to mention four nations or peoples. However, the four nations whose plenipotentiaries the big four individuals are, are taken for granted in the proceedings, and they will have something to say and to do when the difficult task of ironing out a world that has been blistered and corrugated by war is taken up as a steady business. The question is worth asking, therefore, whether the United States will then be one of the four, or three, or two great powers upon which responsibility for results will rest, and how her people may be expected to acquit themselves.

So far as world recognition is concerned, the United States became one of the great powers dramatically and with startling suddenness. So the earth bursts into leaf and blossom in the first warm days of spring, but the preparation of leaf and bud and sap has been long and adequate. Actually America had been one of the great powers since the Spanish War, but her resources, her strength and her ideas had not been fully organized and her own people did not fully know for what achievements she was ready. Now that our relative rank is apprehended by all the world, it is important to understand better than we did, better even than we understand now, just what the elements of our strength are and just how in our majesty of drive and purpose we are likely to behave in our new and fateful role.

Our war activities and achievements unerringly pick out our chief assets and expose our deficiencies and weaknesses. The experiences of war have not greatly altered the schedule nor to any important extent changed the relative positions of the items.

OUR enormous resources stand at the head of the list. They will continue to stand there and to back up our purposes thru the years of political and social reconstruction upon which the nations are entering. Uncle Sam had the accumulated funds to pull the world's finances thru the most terrific economic cyclone of history, and he has enough left in his pocket to guarantee a sane reorganization and adequate repairs of the machinery.

Our second element of strength was our man power, meaning by the term not merely so many millions of individuals, or even merely so much human physical strength, but meaning also the will power, the grim determination, the clearness of perception and the teachableness which made possible the swift organization of our human material into effective armies. Our man power in this sense the European peoples had not discerned until the reality was deployed on the battle fields of France. Germany, to her ruin, sneered at our military potentiality and left it out of her reckoning.

The third constituent of our strength at the beginning of the war and thruout its continuance was the mobility of our popular intelligence. There is no comparable instance in history of so swift an awakening and organization of thought upon the causes and bear-

ings of a great crisis in human affairs as we witness in America after the sinking of the "Lusitania." There is no comparable instance of a popular decision involving so many individual wills so nearly unanimous and so spontaneously arrived at as the American decision to get into the war and to see it thru.

These three factors of our strength as a great world-power have not been strained in a perceptible degree by our efforts hitherto. They will become greater and their momentum more resistless for years to come, but in the tasks which the world now faces a fourth factor will play a relatively larger part than it could play during the continuance of the war and certain elements of weakness and disability, which in a measure were kept out of sight during the years of the war, will call for vigorous watch and ward.

THE further element of strength is our rich heritage of political habit and tradition. No intelligent observer of what is happening in Russia can fail to see that the tragedy of that unhappy land has its deeper explanation in the political helplessness of the people. They have never acquired the ideas or the habits of actual republicanism. Such self-government as they are capable of is little more than the inertia of men and women, normally friendly and honest, who instinctively refrain from disorder under ordinary circumstances. Generations must experiment and slowly learn before a working democracy, competent to safeguard and sustain prosperity, can lift the Russian state to the position of a world power. The American people do not fully understand democracy and its problems, but they have acquired its essential habits. Easily, on the whole, they work their somewhat complicated political machinery, maintaining public order, taxing themselves in peace and in war, conscripting themselves if necessary, and, above all, cherishing, maintaining, organizing and reorganizing, interpreting and reinterpreting that body of common and statute law which, with all its imperfections and not infrequent injustices, all in all, adjusts the relations of men and renders possible the smooth running of an elaborate social machinery as no other invention of man has approximated. That our democratic habit and tradition will dominate, focus and direct the influence of America in world affairs from this time forth is a reasonable inference from facts.

THE weaknesses and defects, which in a measure will hamper our efforts, limit our achievements and impair our influence, are many and varied. Mankind is far from perfection and America shares the universal frailties. The two or three really dangerous shortcomings happen to be those that attract the attention of other peoples and irritate them.

Perhaps it is a failing of youth, but unhappily we are still, as in the days when Charles Dickens and other early critics wrote about us, much too addicted to talking about our prowess and our achievements in boastful terms. The war has taught us some sharp lessons, but we yet have need to learn. *Noblesse oblige*. As one of the great powers of the earth we must become courteous, considerate and modest. Under no circumstances can we swagger.

Yet self-assertion after all is but a frailty, while the habit of trusting to inadequate means to accomplish our

purposes, impatience of slow and thoroughgoing preparation, and irritable eagerness for quick returns, a perilous faith in short cuts, these are worse than frailties. They are a species of insincerity, which we must chastize sternly and correct if we are to play our part worthily in the world. When P. T. Barnum said that the American people liked to be humbugged, he might well have added "because too many of them believe in humbug and too many of them are accomplices in humbugging practices." Other peoples have been more superstitious than Americans, but probably no other has had such faith in quacks and promoters, or has flocked in such multitudes to new and silly religions. These insincerities

are, in the language of St. Paul, the old Adam of our inheritance, and must be put off. It is not unreasonable to expect that our new and larger responsibilities will prove to be a regenerating pressure. Whatever the reason for it may be, neither the individual nor the community, the executive nor the parliament, the citizen nor the nation, is so prone to play the fool when bearing responsibility and observed of all the world as when foot free and vagabond. Thinking soberly, and not more highly of ourselves than we ought to think, let us enter upon our larger obligation as we entered into our struggle for independence, with "a decent regard to the opinions of mankind."

# Nation Making and Nation Breaking

An Editorial

By Edwin E. Slosson

**P**UBLISHERS who have been holding up their geographies until boundaries are settled will find map-printing more expensive than formerly because it will take more colors. The new map of Europe will look more like that of the seventeenth than that of the nineteenth century. The Paris Conference, with only half its work done, has put seven new nations upon the map and may have to add at least as many more. Poland, Finland, Yugoslavia, Czechoslovakia, Hungary, Hedjaz and Palestine have already been recognized. A chain of border provinces extending from the Baltic to the Caspian are striving to split off from the Russian empire, Estonia, Latvia, Lithuania, Ukraine, Crimea, Georgia and Armenia. The Syrians, Assyrians and Siberians are talking independence. The Rhineland and Bavaria may secede from Germany. Free cities may be set up like Fiume and Constantinople. India, Ireland, Korea, Catalonia and the Philippines are clamoring to cut loose. A democratic President, true to the traditions of his party in this respect at least, has exalted secession into a universal principle, and all subordinated nationalities want to take advantage of it.

But President Wilson is not responsible for the movement toward regionalism. He and his colleagues of the Conference are merely trying to guide into peaceful channels a force that otherwise might disrupt the world. It is only under a strong and just national government that the rights of individuals receive recognition. It is only under a strong and just international government that the rights of nationalities will receive recognition. The object of the League of Nations is to make association voluntary rather than compulsory.

Fear and not friendliness is still chiefly the motive that draws people together. The frightened nations snuggle up to one another like children in the dark. Alliances are defensive when they are not offensive, that is, they always are formed with reference to some external force. The American tourist visiting a European village calls it cozy and companionable. He assumes that the houses are crowded so close together because the people liked each other so much. When he has lived there awhile he discovers his error. Folks were forced to huddle together in village slums because of foes in the fields. The streets were narrow because they were dangerous. The towns were walled in. Agoraphobia was an epidemic disease in the Middle Ages, for all open spaces were to be feared. When folks are free to scatter out as in our western states they settle each family on its own farm a quarter mile apart, or if they choose to congregate

they still keep a spacious yard between the dwellings. On the other hand, those of us who are gregariously inclined gather together by the million or more, and pile our habitations on top of one another to the height of thirty or forty stories.

If now there could be a world organization affording the freedom and security of the national government then the two opposing tendencies could find natural adjustment. As we look back over history we see that the centripetal and centrifugal forces have alternately prevailed. The nineteenth century was an age of integration, of imperialism. The unification of Italy and of Germany, the expansion of England, Russia, France and the United States were its characteristic features. But before the close of the last century the contrary trend became evident. Obsolescent tongues were revived and dialects developed into languages. Czech, Provençal, Ukrainian, Irish, Catalan, Norwegian, Hebrew, Slovenian, Polish, Finnish, Lithuanian and Basque were taught as a basis of nationalistic aspirations. Peasant costumes became fashionable and primitive customs came into vogue. National churches were championed by those who had no faith in their creeds. Antiquated ceremonies were resurrected. Local handicrafts were encouraged and local legends disinterred or invented. Folksongs and dances were cultivated and historic pageantry became popular. Everywhere the spirit of particularism grew and patriotism was narrowed and intensified.

**I**T was this spirit that precipitated the Great War and the war in turn has intensified the spirit. The Peace Conference could not check or control it if it wanted to. It can only register the results, and if possible provide a means of regulating the more violent manifestations of such movements in the future. We cannot tell how far the pendulum will swing in the direction of separatism and it does not matter whether we like the way it swings or not. We may think it more profitable to study Esperanto than Gaelic. We may like the metric measures better than yards or varas. We may prefer a uniform currency to pounds, francs and rubles. We may believe it better to rub out boundary lines than to draw new ones. But against such mass movements with a swing of centuries any individual is powerless. It is the rhythm of the ages, the eternal alternation between synthesis and analysis, imperialism and localism, aggregation and dissipation, consolidation and separation, integration and disintegration, unification and multiplication, the systole and diastole of the pulse of progress.

# Murder as a Political Instrument

An Editorial

By Harold Howland

THESE can be but one answer to the concerted murderous attempts that are being made on American public men. That is swift, merciless punishment. To be sure, the perpetrators must first be caught, and that may not prove an easy matter. But it must be done, no matter what demands the task may make upon the state and federal governments.

When those who made and those who planned the attacks are discovered, there must be no hesitancy or leniency in the infliction of penalty. For these are no ordinary crimes.

The usual crime of the police records and the criminal courts springs from anger or cupidity or some other human weakness. But these wholesale attempts at murder are fruits not of the passions but of the brain. They are political, not personal. Their purpose is not injury to an individual but ruin to an institution. They aim squarely at the foundations of government itself. In them sound the voices of misguided men who cry out "Deliver the administration of the public affairs into our hands to do with as we will, or we will kill."

They are attempts at the application of murder as a political instrument.

The problem presented by these cowardly outrages is not that of the respective merits of two political philosophies. It is not the question of whether democracy or Bolshevism is right. It is the question whether the adherents of Bolshevism or any other "ism" whatever shall be permitted to murder those who do not agree with them. The same problem would be raised if a group of believers in the Constitution of the United States should set about murdering Socialists, Bolsheviks, Anarchists, or the adherents of any other shade of red or black. The constituted government of a democracy could not permit such a practise without committing suicide.

Shall there be law or shall there not? Shall there be freedom or shall there not? Shall there be government or shall there not?

America knows but one answer. The answer must be made good with all the conviction that burns in the soul of the American people, and with all the force that the American nation wields.

## Editorially Speaking

Women are people.

\*\*\*

Sensitive sould "antis" can go down South, where "chivalry" still flourishes.

\*\*\*

State legislatures, please remember there are ladies present and don't shove. The line forms on the right.

\*\*\*

Wilson wanted peace without victory. He got victory without peace.

\*\*\*

"The Covenant of the League of Nations is a revolutionary document."—Senator Reed.

And possibly the Constitution of the United States was tainted with revolution in the trying days of 1787.

\*\*\*

The proposal, describd on another page, for the adoption of a thirteen-month year, seems to have so many things in its favor that it makes us suspicious. Nothing, in this cantankerous old world, could be so perfect as the new plan looks. But not even our naturally suspicious nature has yet been able to find a flaw in it. If you find one, let us know.

\*\*\*

The refusal of the Rules Committee of the House to permit the repeal of the Daylight Saving law to be tacked on to the Agricultural Appropriation bill as a "rider," sets a splendid precedent. Each piece of legislation ought to run the gauntlet of congressional consideration on its own legs. Riders on appropriation bills ought to be banisht forever in both houses of Congress.

\*\*\*

Count von Brockdorff-Rantzau has hit the nail squarely. He said in his protest on the Allied terms of peace, "We must then renounce the realization of all our aims in the spheres of politics, economics and ideals." Pre-

cisely. That is just what the Great War was all about. The Germans fought to impose their "aims in the spheres of politics, economics and ideals" upon the world. The Allies fought to prevent it. Unless the German people are compelld to renounce those aims, the war will have been fought in vain.

\*\*\*

Mysterious dangers are portentously hinted at if the prohibition of wine and beer goes into effect on July 1. The "wet" advocates seem to be trying to scare Congress into believing that the workingman deprivd of his beer will become a raging rebel neither to hold nor to bind. Congress would do well to stop its ears for a moment and calmly reflect that the workingmen of two-thirds of the states have already been deprivd of wine and beer by state prohibition—and the republic still stands. In spite of Mr. Wilson, since the nation has decided that it will have prohibition, let us have it forthwith. Those who want to drink will never like it anyway—until they have tried it for a while.

\*\*\*

It seems hard for Americans to understand Italians. But it is worth trying. Any American who would really like to comprehend the Italian point of view would be repaid for careful pondering of a statement made to an American journalist in Paris by Prime Minister Orlando:

We suffer much from the fact that the Italian people are not understood abroad. We once had a statesman namd Macchiavelli and from that time to this the outside world believes that secret meanings and indirect motives are hidden in every proposal advanced by Italy. In point of fact the Italian people are profoundly sentimental. They are guided by their real feelings of patriotism rather than by their interests. Our people are poor; and yet while other rich peoples look after their pocketbooks, in the decisions of the Italian people economic interests have little weight.

There is a lot of truth in the Premier's explanation.

**M**EXICO is again seething in unrest. Four Carranza generals have declared themselves for the presidency with all the power of their respective armies behind them. Four revolutionary leaders with not less than 5000 men behind them at all times and on occasions boasting as many as 40,000 followers each, are still running amuck in the land.

It is nine years ago this summer since the revolution began in the overthrow of the Diaz régime. For five of those years a hermetically sealed censorship has prevented the true facts on Mexico coming to the outside world. The censorship is now off, and whether it did more good or harm to Mexico is beside the real question for its reason. Germany had plotted to involve this country in war with Mexico in order to prevent the United States throwing its strength into the European war; and to prevent German propaganda fomenting bad relations with Mexico, the State Department screwed the lid down tight on all news from Mexico. In this interval Mexican propaganda was not idle. Platform, press, "movie films" have been utilized to the utmost to spread abroad favorable accounts of conditions in the republic to the south of us. I encountered one set of films the other day, supplied by paid Mexican propaganda, which is designed to reach 500,000 American schools. If this propaganda portrayed true conditions in Mexico, no objection could be taken to it; but it has been as insidiously false as anything ever put over by German agents.

However, the lid is now off Mexican news. Four embassies have notified the Mexican Government that there must be a clean-up. These four embassies are the American, the French, the British and the Spanish. Mexico bulked large in the Peace Conference and will be taken up by the new League of Nations. Also Mexican affairs are to be fully discussed in the present session of Congress. Facts are no longer to be suppressed. What are the facts as to Mexico?

First as to railroads—of Mexico's thirty or more rail lines, only one can be run on regular schedule. That is the line from Laredo to Mexico City; and both passenger and freight trains on this line have to be preceded by "exploradora" trains—an engine with armor-proof box cars filled with soldiers and rapid-fire guns. On the passenger and freight trains also go two carloads of soldiers in armored box cars—one behind the engine, the other to the rear of the train. On other lines conditions are appalling. I quote from an official report sent up less than a week ago: "The line from Monterey to Tampico was attacked three times in one week in April. Several passengers were killed and wounded, among them an American. Governor Osuna, of the Gulf country, narrowly escaped being kidnaped. The line from Tampico to San Luis Potosi is so unsafe it is practically unused. The line from Puebla to Vera Cruz is unused, Jalapa on this line having been captured in the last month. On the other line to Vera Cruz, in December, there were only eight days in the month when trains were not blown up."

I went over this line myself in March on a Sunday. The rebels blew up the train Monday. This line used to have eighty to ninety good locomotives. It now has left only eight. In the Tehautepec country conditions are worse. Bodies of rebels or train men alternately dangle from the telegraph poles as the victory has gone in each day's skirmish. Across the Isthmus, traffic is at a standstill. On the Old Central Line from Torreon, there has been no passenger traffic for four years. The lives of the train men are so continuously in danger that in the words of a brakeman, who has been impressed into the services of three different generals, "the trainmen have been imperiled in three ways, by being compelled to haul off their own wounded, by enemies hiding along the tracks,

and, worst of all, by their own generals. "Oh," he added, "I wish the old times were back. Things were different when I began railroading. For six solid years we worked for American managers and not once was a shot fired."

As to security of life and property—it is nil. There are in the field four revolutionary armies under recognized leadership—Felix Diaz in the Vera Cruz region, Pelaez in the oil region, Villa in the north, Meixueiro in Oaxaca. But there are also in the field almost as many roving predatory bands as there are hills to hide them. It is from these, rather than the recognized revolutionary leaders, that the danger to life and property comes. Many of Carranza's soldiers will tell you with naive frankness their pay consists of "25 cents a day and a free hand"; and they don't get the 25 cents. That is why they are soldiers by day and bandits by night. That is how the rebels get their supply of arms and ammunition. You can buy a cartridge belt for 25 to 10 cents, and a rifle from \$2.50 up; and in many of the Carranza garrisons are secretly placed revolutionary soldiers, ready to act when the time is opportune. That is how market money stolen from mining and oil paymasters

is later found on the persons of Carranza officers.

"All the ammunition we now use," declared a revolutionary captain in the south, "we get from the Government forces. We capture some. The rest we buy. It is poor stuff. About one cartridge in five goes off. The powder is so bad, the bullets so poorly centered, they split and jam the rifles."

"Do you get the ammunition from the men or officers?"

"From the very highest officers. Gold is very pretty," he added.

"Where do you get the dynamite to blow up the trains?" I asked another revolutionary leader.

"From construction camps and passing trains."

"How do you know when dynamite has come in on the train?"

"Carranza men and trainmen are in our pay."

"Why do you blow up trains?"

"To get the customs receipts coming up in gold to Mexico City."

"How do you know when it is coming?"

"More Carranza men in our pay."

"One Carranza officer was court-martialed and shot for betraying a Vera Cruz train—was he not?"

"That was his funeral, not ours."

lutionary armies under recognized leadership

Because of the paralysis of general industry, many a poor peon has taken to banditry, who would otherwise be a law-abiding Mexican; and because of the general lawlessness and inability of the Carranza Government to put it down, kidnapping has become almost epidemic. Only last fall a young fellow from Los Angeles was captured by a roving band in the north. His ears were cut off and sent to his friends with a demand for a ransom of \$5000. His people were poor and there was delay in raising the money. By the time the ransom fee could be sent in it was met by messengers coming out with the boy's fingers and demands for another \$5000; and while the community was gasping with horror over that outrage, word came that the boy had been murdered.

Somewhat similar was a case near El Paso a few months later. This time the demand was for \$15,000. It was sent to the appointed place in bills. "To — with bills," yelled the captain of the bandits. "Go back and get it in gold"; and back the Americans went and got it in gold.

WHEN I was in Mexico City in March, a boy who was the son of a Carranza supporter was kidnaped off a ranch not ten miles from the city. The demand was for 4000 pesos. It was pay, or see the boy mutilated. The money was paid over in broad daylight opposite a park as public as Central Park, New York, and 1000 pesos was paid the police to look the other way. About the same time, two other boys were captured. One was so badly injured in the scrimmage he was left on the road. The other was brought in to his father's door and \$1800 paid for his release. When I was in the oil country late in March, Carranza's entire garrison band of musicians was captured and carried off to the hills by bandits; and a local governor was let go simply because the foraging raid was too rapid to delay escape by carrying him along.

Mexico City normally has a population of 500,000. Today Mexico City numbers close on a million people, the great increase coming from country people, who have fled the country regions to escape plundering bands and are now living in the city as they can, many of them sleeping at night in the streets with a newspaper for a blanket. In Mexico City today are 116,000 children running about homeless and school-less and in many cases orphaned by the nine years of war. The fate of the boys is bad enough. Another nine years and they will graduate full-fledged criminals. The fate of the girls can be seen in any Mexican hospital, where poor little bodies not yet in their teens are dying from defilement in soldier or bandit camp. These conditions are untellable. Girls in the Gulf country are sold as low as \$5. Neither can the suffering of daughters of American colonists be told here. They are on record in the State Department. At one time there were 50,000 American colonists in Mexico. There are less than 5000 today. The others have fled long since for their lives, leaving their life work—coffee, or sugar, or cotton plantations in smoking ruins. The record of these is as gruesome as anything told of Belgium. Multiply Belgium by seven years instead of four; and a faint idea of conditions in Mexico can be glimpsed.

All this takes no account of mines seized and looted of bullion, of ranches stripped bare, of oil fields harried till the oil producers clubbed together and with the full approval of the State Department paid Pelaez \$60,000 a month to protect them from raids. It is blackmail, of course; but at the time the blackmail was first levied, the Great War needed oil; and the navies of the world were within three weeks of no oil. In spite of paying \$60,000 a month blackmail, seventeen oil men have been murdered in a year, thirty-four assaulted and robbed of every stitch of clothing and [Continued on page 418]

# New Lights on the Russian Revolution

By Edwin E. Slosson

WE are already getting a considerable installment of the twenty thousand volumes that will be written about the Russian Revolution. Two of those in hand, *Russia's Agony* and *Russian Revolution Aspects*, are by men on the spot, journalists, that is to say, trained eye-witnesses; one, Robert Wilton, correspondent of the *London Times*, the other, R. C. Long, correspondent of the *American Associated Press*. Both are of course anti-Bolshevik. Mr. Wilton is also anti-Semite, for he lays the excesses of revolution largely to the Jews, especially the American Jews. He sees no safety for Russia till the Jews are sent to Palestine—and we must assume, tho he does not say so, that he wants them chained up there. He says that in April, 1918, the Bolshevik Government, including 384 People's Commissaries, was represented by 2 Negroes, 13 Russians, 15 Chinamen, 22 Armenians and Georgians, and more than 300 Jews. Of the last, 264 had come from the United States during the revolution. Evidently, then, they had received serviceable training in the art of getting offices during their sojourn in our midst, even if they got none of the other forms of Americanism.

Mr. Wilton lived in Russia from boyhood and so knows the language and the people. His bulky volume is a mine of information on the things we want most to know about. Particularly useful is his detailed and careful tho unsympathetic account of the various revolutionary parties and their leaders: "The hope of Russia" in his opinion is the Cossacks, to whom he devotes several eulogistic chapters. His great regret is that Kornilov and his Cossacks did not overthrow Kerensky. He accuses Kerensky as well as Lenin of being supported by German money. But the eclipse of Russia is only temporary. "The day of Lenin and destruction draws to a close." Doubtless, but he wrote this in December, 1917, and still Lenin and destruction prevail and even the steadfast Cossacks have not proved immune from the infection.

The reason the *muzhik* succumbed so easily to Bolshevik influence is because he has "no consciousness of nationality," no patriotism and no comprehension "of the idea of property in general" and especially of landed property. In the mind of the Russian peasant "lands,

waters and all that therein live or grow are God's" and hence belong to one man as much as another.

Mr. Wilton throws a great deal of light on the origin of the war and the causes of Russian inefficiency. The revelations of the Sukhomlinov trial, which aroused great excitement in Europe, were not reported in our papers, so I quote the passage showing how the Czar's generals conspired to trick their sovereign when he tried to cancel the mobilization order which Germany used as an excuse for declaring war. General Sukhomlinov testified:

On the night of July 30 I was rung up by the Emperor and told to cancel the mobilization. It was a direct order, not admitting rejoinder. I was overcome, knowing that it was impossible to cancel the mobilization for technical reasons, and also because it would provoke frightful confusion in the country. . . . Half an hour later General Yanushkevich telephoned. The Emperor had told him to suspend

the mobilization. He replied that it was technically impossible to do so. Then the Tsar had said: "All the same, suspend it." General Yanushkevich asked me what was he to do. I replied, "Do nothing." I heard General Yanushkevich utter a sigh of relief, saying, "Thank God!"

Next morning I lied to the Emperor—I told him that the mobilization was proceeding partially, only in the southwest, altho I knew that the mobilization was a general one and that it was impossible to stop it. Fortunately the Emperor changed his mind that day, and I was thanked instead of being censured."

Mr. Long, unlike Mr. Wilton, does not sympathize with General Kornilov in his attempt to capture Petrograd and overthrow Kerensky. The fear inspired by the Tatar general's "Savage Division" roused the people to resist them. Even the Bolsheviks stood by Kerensky and Kornilov's *coup d'état* was a failure. Mr. Long gives the following description of how

U. S. Official from Keystone View

These ringleaders of the Bolshevik government at Tomsk were executed by the Czechs at Ekaterinburg. Right to left they are: the promotor of Bolshevik propaganda, the town commissioner and the chief justice. The girl stenographer was executed, too

International Film

"Long Live the Third International" reads the banner draped around the altar in a public square in Petrograd, the scene of one of many May Day demonstrations in Russia

Kornilov's proclamation was printed at Moghilev:

When the staff printers, Bolsheviks to a man, refused to set up the proclamation in which the revolt was justified, he sent to the typesetting room ten Tekke Turcomans, all men over six feet high, with enormous Mongolian skulls, oblique eyes, yellow skins, and particularly ferocious expressions, and these, with their long curved sabers drawn, stood over the compositors while the proclamation was meekly set up. But the compositors were cleverer than the Turcomans. They printed Kornilov's proclamations; but they printed secretly at the same time Kerensky's proclamation denouncing the revolt, and the two proclamations were loaded on railroad cars, and distributed at the same time.

The most interesting features of *Russian Revolution Aspects* are the personal sketches and interviews of the leading actors in the great drama. Mr. Long quotes the despairing Kerensky as saying: "I am supposed to be supported by all reasonable men, but there are no reasonable men in Russia." He visited Protopopov, ex-Minister of the Interior, in his cell in the Fortress of

St. Peter and St. Paul, expecting to find him professing innocence, but Protopopov declared: "I am guilty of the most awful crime that a man can commit, the crime of failing to understand the spirit of my age." General Rennenkampf, in a neighboring cell, when asked for the reason of his defeat, replied: "I am told that the cause of Russia's defeat is that three-quarters of her officers are Germans; the real cause is that three-quarters of them are Russians."

Mr. Long's conclusion is worth quoting now that the Allies have undertaken to reestablish Russia:

Order in Russia if it is not to be reestablished by Russians—which means, left to be brought about by exhaustion—can only be restored with certainty by general military penetration, followed by reorganization, with the reconstruction of officialdom, the restoration of the police, and widespread financial, industrial and commercial reforms. The autocracy in peace time needed a million and a half soldiers to maintain a very precarious order; and to restore order by compulsion today would require a force at least as large. That is the obstacle facing America and her allies. The present weak assistance given to the anti-Bolshevik parties may easily ensure the overthrow of the already shaken Government of Soviets; but this is not enough. The experience of Lvoff and Kerensky in 1917 shows that a non-Bolshevik Government of the capital is not in itself sufficient to maintain local order or to enforce plans of reconstruction without which Russia cannot flourish. A bourgeois, Menshevik, Social-Revolutionary, or coalition Government set up in Petrograd or Moscow after the fall of the Bolsheviks will not have authority throughout the country unless it is buttressed upon the "strong government power" which the first Provisional Governments and the Bolsheviks alike planned, but alike failed to create. The popular notion in America that once the Bolshevik despotism is overthrown, the Russian majority will voluntarily unite, keep order and bear burdens, is not supported by the experience of 1917. The ultimate problem, therefore, before America and the Allies will not be: what Government Russia chooses, but how that Government is to be kept afloat.

It is curious to see that the sharpest criticism of the Bolsheviks comes from those who might be expected to have a certain sympathy with their views. Certain American and British capitalists seem to be snuggling up to the Soviet and we often hear a defense of it from ladies and gentlemen whose hands have no hint of callouses. But the Social Democrats, and especially the Russian Socialist Revolutionists and Anarchists, renounce the Bolsheviks and all their works in stronger language than any mere bour- [Continued on page 416]

The activities of the Rockefeller Institute in its health crusade extend to every part of the world. The key indicates the most important work in each country

# Making the Whole World Well

## What the Rockefeller Foundation Is Doing for Humanity

By President George E. Vincent

WITH the coming of peace an effort is to be made to bring nations into closer relations of understanding and good will. Gradually more normal conditions of intercourse will be reëstablished. Restrictions upon travel and commerce will be relaxed. There will be an exchange not only of commodities but of ideas. Each country will be urged to contribute its best achievements to a common fund upon which all lands may draw. In this commerce of culture, science, sympathy and idealism, the Rockefeller Foundation gladly puts its policies, personnel and resources at the service of the world.

Foremost in public interest of all its various activities is the campaign against tuberculosis in France. It may well be asked whether it was not presumptuous for Americans to go crusading against tuberculosis in the land of Louis Pasteur. French scientific men understood the theory of tuberculosis and the principles which underlie control of it. For example, the sanatorium at Bligny, thirty miles south of Paris, is said to be equalled by few and surpassed by only one or two American institutions of this sort. In the organization of local committees, in relief measures, in issuing literature and in carrying on educational work, in Government provision for tuberculous soldiers, in setting apart hospital beds, and in other ways much was being done in France when the American Commission arrived.

It soon became apparent, however, that these various institutions and activities were few in number, isolated, almost unrelated. In France ideas do not spread rapidly by imitation as they do in the United States. There are few French national organizations which can quickly inform every community of what is being done in every other. The "boosting" spirit is largely lacking in the

Gallic character. Individualism, both personal and of the group or community, is a dominant influence.

The American contribution, then, has been a demonstration of organized team-play. Only as dispensaries, hospitals, sanatoria, preventoria, open-air schools, home supervision by visiting nurses, relief, extra food, educational campaigns, committees, and government officials are all fitted into a cooperative and unified system, can really effective results be secured. The Commission for the Prevention of Tuberculosis of the Rockefeller Foundation and the Tuberculosis Bureau of the American Red Cross set themselves the task of demonstrating to the French people the possibilities of such team-play. The Nineteenth Arrondissement in Paris and the Department of Eure-et-Loir of the provinces were selected for intensive organization of the essential agencies of tuberculosis control.

Four dispensaries were planned for the Arrondissement, three of these being opened and in operation before the end of 1918. Groups of nurses, or *visiteuses d'hygiène*, attached to these centers, visited patients in their homes. The Red Cross provided extra hospital wards, opened sanatoria and preventoria in the suburbs, and supplied food and clothing to needy sufferers from tuberculosis. Thus, elements relatively ineffective when isolated were combined into a mutually reinforcing cooperation.

In the Department of Eure-et-Loir during 1918 four central dispensaries and six secondary centers were opened. Another six were nearly completed; seven others were located for future development. It is expected that by July, 1919, the twenty-three called for in the program will be in operation. In the chief towns the French have set aside hospital beds for the use of the

commission. A sanatorium is being prepared near Dreux. A day camp is available just north of Chateaudun. French authorities and local committees are cooperating heartily in securing facilities, and as the Red Cross withdraws will assume increasing responsibility for relief work, the provision of extra food, etc.

When the commission was organized in 1917,

In North Carolina—the children are gathered outside the Saratoga School awaiting the regular visit from the dentist

centers in which special courses could be organized which should consist of lectures, clinics, hospital and sanatorium experience and field work in visiting patients in their homes. French and American physicians were engaged as instructors, opportunities of the essential kind were secured, bourses, or scholarships, of 150 francs per month were offered.

In Brazil—house to house calls are made among fishermen's families and intensive treatment for hookworm is given

one of the problems was to find public health nurses who were familiar with tuberculosis work and who could speak French fluently. Fortunately, a group of exceptionally able and loyal American nurses was secured. But it was soon evident that reliance must more and more be placed upon the training of a French personnel. One of the first tasks, therefore, was to provide in Paris

In France—this is visitor's day at one of the municipal kindergartens where bodies and minds are both cared for

In China—constructing the Anatomy Building, one of the "Green City" of the Peking Union Medical College

French women of a satisfactory type responded in gratifying numbers. About seventy were enrolled by the spring of 1918. At the end of the year forty-five nurses were in the service of the commission. Fifty-six others were in training.

"Do you know the Medicinal Tank?" asks a writer in *Le Matin* of November 30, 1918. "It is an invention of the Rockefeller Foundation. This

tank rolls over the roads of France, bearing signboards.

Behold this tank entering a city—or a village. . . . Delegates cover the city with posters. And such posters! Barnum and Bailey would not be ashamed of them. . . . The legends and designs make people laugh. They gather in a circle, they are amused—and instructed. . . . This is their harangue brought to us by posters and cinema:

No one, O Frenchmen, has excelled you in the scientific study of tuberculosis. But it is not enough that your scientists combat this disease; each one of you must take part in the battle, must benefit from the knowledge acquired, and perform in his turn the office of educator. . . . You think of tuberculosis only after you have it. We are going to make you think of it all the time so that you may protect yourself against its invasion. . . . This way, this way, follow the crowd. . . . We put medicine within the reach of little children. This way, this way, tell us what you prefer, moving pictures or the hospital. Our show saves you from the hospital. We are advertizing public health."

There is little to add to this description of the educational campaign of the commission. During 1918 three traveling exhibits and groups of lecturers visited ten departments, and in 141 towns of 3000 or more population gave 875 lectures with demonstrations and exhibits. In the same period 2,115,708 pieces of printed matter, posters, pamphlets, post cards and games were widely distributed thruout the whole of France.

A campaign of extension has reached twenty-seven departments. Representatives of the commission and of the American Red Cross have visited leading towns and cities in a systematic effort to organize local committees and to induce these groups to establish dispensaries as the first step toward a complete plan for control of tuberculosis. In the twenty-seven departments, at the time of the first visit, twenty-one dispensaries were already in existence. By the end of the year fifty-seven new dispensaries had been opened; twenty other dispensaries were in process of installation, and plans for forty-nine more had been definitely made. Besides these dispensaries, fifteen laboratories were arranged for; thirty-eight new nurses installed, and forty-two new and active communities organized. It is important to remember that almost all of the expense, not only for the creation but for the maintenance of these activities, is borne by the French themselves.

The demonstrations begun in 1916 to test the possibilities of ridding a community of malaria were continued during 1918. In four towns in Arkansas anti-mosquito measures were carried out with marked success. By draining or filling pools, by ditching sluggish streams, and by oiling surface water which could not be dealt with otherwise, the breeding of the anopheles (malaria-carrying mosquito) was almost wholly prevented. Thus the sole means by which malaria can be transmitted was eliminated. The results as tested by the number of calls made by physicians on persons who

were suffering from the disease were striking. In Hamburg, Arkansas, the number of calls fell from 2312 in 1916 to 259 in 1917 and to 59 in 1918, a reduction for the period of 97.4 per cent. The per capita cost for 1917 was \$1.45; for 1918 it was only 44 cents. In four other communities the percentage of reduction varied from 95.4 per cent to 80 per cent, while the per capita costs ranged from \$1.25 to 46 cents.

A constant aim of the Foundation's International Health Board is to turn over to government agencies public health activities which have been demonstrated to be effective. The anti-malaria campaigns in Arkansas and Mississippi have been carried out in closest coöperation with the health boards of these states.

A yellow fever epidemic was reported in Guatemala in June, 1918. After consultation with the Guatemalan Minister in Washington, the International Health Board tendered its services to the President of the Republic, and offered

to send a competent medical officer with funds to coöperate in bringing the epidemic under control. On July 11, 1918, Dr. Joseph H. White, released from the army and granted leave by the Public Health Service, sailed for Guatemala. The epidemic was brought under control, so that when on September 19 Dr. White was compelled to return, infection was left at only one point. The resident representative of the board took charge and continued appropriate measures. On December 4 he reported that no yellow fever remained in Guatemala.

With the hearty coöperation of the Government of Ecuador and of the municipality of Guayaquil measures for yellow fever control were actively inaugurated November 27, 1918. The attack is being directed against the stegomyia mosquito, by which alone yellow fever can be communicated. By the end of December 125 men, divided into squads of five each, were systematically at work in the city of Guayaquil.

BY far the most extensive work of the International Health Board has to do with hookworm infection which prevails in almost all tropical and semi-tropical lands, in the southern states of America, and in mining districts in several European countries. The policy of the board is to work only in coöperation with governments, and so soon as may be, after successful demonstrations have been made, to turn the undertaking over to public control. The usual program of procedure includes: (1) an infection survey to determine the prevalence of the disease; (2) an intensive demonstration of treatment to cure the victims of the malady, together with (3) a campaign of popular education as to the nature, control and prevention of hookworm disease, and (4) a persistent effort to secure the provision of proper sanitary facilities and regulations by which alone the pollution of the soil and the reinfection of the population can be avoided.

In Guatemala—the fight against yellow fever was carried on under these leaders. General Gorgas is second from the right

While the relief of large populations from the limitations and suffering which are consequent upon hookworm disease is in itself a highly important aim, the International Health Board has always regarded its hookworm demonstrations as a means to the establishment of inclusive public health services capable of dealing with all aspects of public health for a community, a state, or a nation.

A hookworm survey of Papua and a region in Queensland has led to unexpected developments. The authorities, both of Queensland and of the Federal Government of Australia, have proposed a five-year period of coöperation in carrying out for Queensland and Papua a program of rural sanitation in which hookworm control is to play a leading, but not an exclusive, rôle. The board will contribute the services of an expert sanitarian and appropriate a fairly large annual sum at the outset.

THE fifteen buildings of the Peking Union Medical College which are being constructed under the auspices of the China Medical Board of the Rockefeller Foundation, have gone steadily forward during 1918. The pre-medical school, which opened in 1917 with eight pupils, increased its enrollment in 1918 to seventeen. Additions to the faculty of the Medical School were made during the year until by the end of December thirty-two men and women were under appointment.

It seems a long way from Peking to Sao Paulo, Brazil, but the commonwealth of science knows no national boundaries and ignores distances. In March, 1918, a new Department of Hygiene was opened in connection with the Faculdade de Medicina e Cirurgia at Sao Paulo. Two American scientists have been lent to this medical school for a period of five years, during which time, on scholarships provided by the International Health Board, two Brazilian physicians are to receive special training at the Johns Hopkins School of Hygiene and Public Health, with a view to taking over the new department in Brazil.

From the outbreak of hostilities in 1914 up to and including appropriations payable in 1919, the Rockefeller Foundation has given for relief and other war purposes approximately twenty-two and one-half millions. During the years 1914-1916 the Foundation maintained its own relief organization in Europe, but when the United States entered the war, this staff was withdrawn and appropriations for Allied countries were made directly to the American Red Cross. The policy of the Foundation has been to work so far as possible thru a few coördinated agencies rather than to distribute relatively small sums to a large number of independent societies.

The many activities here described are consistent parts of a unified program, which is dominated by a purpose to promote the general aim of the Foundation as expressed in its charter: The Welfare of Mankind Thruout the World.

*Is pellets of toasted hominy puffed to globules*

## Try the Other Bubble Grains

Most of you delight in one Puffed Grain, we think. But there are three of them, each with its own enticements. Serve them all.

*As breakfast dainties* it is hard to choose. All are toasted, savory bubbles—flimsy, crisp and delightful.

*In bowls of milk* Puffed Wheat is a favorite. And it means whole wheat made wholly digestible—the supreme supper dish.

*With berries* mix Puffed Rice or Corn Puffs. So in candy making or as garnish on ice cream. And so for between-meal tidbits, doused with melted butter.

### All Are Steam Exploded

All are made by Prof. Anderson's process. All are shot from guns. All have every food cell blasted so digestion is easy and complete.

All are food confections, delightful in their texture and their taste.

These are the queen foods, and summer brings you countless uses for them. No other way of serving cereals compares with this bubble form.

Use them to make whole-grain foods inviting, and to make the milk dish popular.

**Puffed Wheat                      Puffed Rice**  
**and Corn Puffs**  
*Each 15c, Except in Far West*

### Summer Servings

# Call It a Wasted Summer Unless You Read Some of These Books

## Decent and Dauntless

It is curious how interesting utterly commonplace things can be. It is cheering, too. After all, "Solomon Grundy born on Monday" is the basis of all romances, however much you try to conceal the fact. J. C. Snaith does not try at all, in *Undeclared*. He tells his story very simply, so simply, in fact, that you find yourself rereading a scene to find out how in the world he managed to make it get hold of you so—and you can't quite tell.

A synopsis of the plot would make rather dull reading. The hero, who is forty-one and an unsuccessful green grocer, enlists as a soldier, comes home on a two days' leave and has tea with his wife, goes to France and comes home again with a bit of gas. He and his wife take a walk in the woods. It is almost all as simple as that, but his reawakened manhood and their reawakened love under the all-pervading shadow of the war make the deepest and tenderest of romances, written with the same absolute sincerity that pervaded "The Sailor."

One of the most interesting things about Bill Hollis, the green grocer, and about his tyrannical father-in-law, the carry-on, get-things-done mayor of Blackhampton, is the way in which they manage to be at the same time individuals and types. Bill Hollis in his reaction to the war is a sort of lower-middle-class Mr. Britling.

The feminine characters are delightfully well done. The mayoress who takes to her bed when she learns that her husband has been re-elected and she must go thru another year of glory, the tactful and designing Gerty, Melia and Mrs. Doctor Cockburn, are all that heart could desire. The Joan of Arc, damn-it-all Sally was added, one feels, as counterballast by a chivalrous and conscience-stricken author.

*Undeclared* is a fair title for the book, but we rather wish the author had used instead his dedication, "A Decent and a Dauntless People."

*Undeclared*, by J. C. Snaith. D. Appleton & Co.

## A Tragedy of Riches

The trouble with Stephen McKenna is that he has too many ideas. They are interesting ideas, but, being young and consequently afraid that life is too short to express them all, he crowds an oversupply into one book. One resents a little the entanglement of the main theme of *Midas and Son* in side issues and a surplus of detail, however interesting, because the main theme itself is so well worth while and so forcibly handled. It pictures the reaction to wealth, as "Sonia" pictured the reaction to the war, of a group of extraordinarily well drawn characters. Deryck, with his restless nervous energy and his undirected power, is a fascinating

and an appealing person. The two heroines—the one suffers all thru the book from uncertainty as to the exact pronunciation of their names, Idina and Yolande—are exceedingly real people, particularly the very likable Yolande, who makes some exasperatingly young and human mistakes. Mr. McKenna, unlike the average author, does not try to picture the inner workings of the feminine mind, but presents his ladies always thru their reaction on masculine personalities, an effective as well as a safe method.

It is difficult not to compare the book with "Richard Feverel," tho there is not very much to be gained by the process, unless it be instructive to see how two generations look at the problem of the father who controls the purse strings and consequently his son's whole existence.

*Midas and Son*, by Stephen McKenna. G. H. Doran & Co.

## That's Exactly Like—

If you have a thirteen year old boy in your household, or a high school girl, or a school baseball captain, or a dog, or a husband who likes to garden, but especially a mother, then you will be highly entertained by *The Prestons*. Mary Heaton Vorse has written a book about an average family in a middle western town who are always doing things which are "just like" people you know. Take this as a sample. It is the mother of the family who tells the story:

I came back to the library and shook the rug out on the piazza to get rid of Piker's hairs, but Edith's wrap I left ostentatiously out for her to hang up, so that weak-mindedness could not entirely call me its

John Collis Snaith, the English novelist, who wrote "The Sailor" and "Undeclared"

own. At that moment I caught sight of a ray of sunshine streaming thru the petals of the flowers in the front living room. I decided that this was no morning for discipline and hung up Edith's wrap.

*Pee Come to Stay*, by the same author, is a harmless and rather silly little idyl of Greenwich Village as the Middle West likes to think it is.

*The Prestons*, by Mary Heaton Vorse. Boni & Liveright. *Pee Come to Stay*, by Mary Heaton Vorse. Century Co.

## The Great American Novel

Will the great American novel be a movie? If so, Reginald Wright Kauffman's *Victorious* is well up in the running. Of course the great American novel of today is a novel of America and the war, and *Victorious* pictures the war on both sides of the water. There are battle scenes full of vivid horrors of sight and sound and smell. There are scenes behind the lines in muddy, ruined, little French villages become for the time an extension of the United States. There are scenes in the peaceful Pennsylvania town of Americus, in its sleepy neutrality before April, 1917, in its half and finally full awakening to the crisis. It all rings true enough, but it reads exactly like a scenario.

After all, the most interesting thing about the book is the information it gives of our early misconduct of the war, the murderous delays and inexcusable inefficiencies, the summer uniforms for men in the middle of a French winter, the lack of airplanes, the scarcity of ammunition, the methods adopted by the censorship to cover up the mistakes of the Government and the army chiefs and to conceal facts from the American people. Mr. Kauffman was in France as a correspondent and knows whereof he speaks. Some of his tales of criminal and costly delays have been told us already by the press; others we are learning day by day as our men come home and are demobilized; many have never before been printed. They are worth reading whether or not you like the thrilling, sentimental movie plot on which they are strung.

*Victorious*, by Reginald Wright Kauffman. Bobbs-Merrill Co.

## Adventure Undiluted

The scene is a moon mad, music mad, African beach, and the time the night before the marriage of Andrea Pellor, poor and beautiful, to Sir Hammar, an old South African diamond magnate. The heroine leaves the ballroom for a breath of air, and finds a tall, unchivalrous but fascinating American man tinkering with an airplane. "Please, Mr. Man, take me with you," and deep into the African wilderness they go.

In the nine weeks that follow, for the airplane is smasht and they make

a forest landing, there are antelope killings, elephant hunts, conclaves with chieftains, and all the romance that comes to mind at the thought of the African jungle.

*White Man* is sheer melodrama of the two on a desert island variety, but there is a certain fascination about the descriptions of native life, the black boat boys, the women pounding millet and carrying wood and water, the jungle sights and sounds, with sun-days and rain-nights.

There is nothing particularly new about the determination of a young millionaire idler to prove himself a man. In *The Curious Quest*, however, E. Phillips Oppenheim has built upon this somewhat threadbare foundation a novel of adventure that is full of surprises and alive with personality.

The young idler, hero of the story, is one Ernest Bliss, and his physician's brutally frank diagnosis of his condition is the impelling force which lands the young man, with five pounds in his pocket, in a part of London which heretofore has been to him but a name.

Bliss has wagered 25,000 pounds that aside from the aforementioned fiver, he will live for a year upon his earnings solely, and the colorful descriptions of the varied succession of his adventures and his "jobs" make very good reading indeed.

*The Wicked Marquis* is not quite so exciting a tale, but is nevertheless an entertaining melodrama played by a very aristocratic nobleman, a beautiful daughter, heavily mortgaged estates, a designing duchess, an American millionaire, a hard-hearted old gamekeeper and the always convenient shares in oil.

*White Man*, by George Aznew Chamberlain. Banta-Messell Co. *The Curious Quest* and *The Wicked Marquis*, by E. Phillips Oppenheim. Little, Brown & Co., Boston.

## Love Stories

Mary Roberts Rinehart has dared to be original by doing the obvious and calling her latest book *Love Stories*. Most of the stories are about a hospital, a pleasant sort of hospital where all probationers are pretty and all handsome young patients, rich. She has an agreeable skill in constructing backgrounds of thermometers, interns, sheets and hot-water bottles. The best story of all, however, "Are We Down-hearted? No!" gets quite away from the hospital to an American chorus girl and a Canadian lieutenant in London. Taking them as a whole they are not great stories, but they are good ones. You will probably read them all and enjoy them.

*Love Stories*, by Mary Roberts Rinehart. G. H. Doran Co.

## More Heavenly Twins

"Elizabeth" of the "German Garden" and also the author of the much discussed "Christine," has in her story of *Christopher and Columbus* created a pair of twins who emulate the heavenly duo of Sarah and Grand. The von Twinkler twins are older, tho not much more mature, and their adventures in "dis-

# To Those Who Want Cleaner Teeth

*All Statements Approved by High Dental Authorities*

## You Must Remove the Film

Your teeth are not rightly cleaned if they discolor or decay, if tartar forms or pyorrhea starts.

You may brush them twice daily, but the great tooth wrecker—a slimy film—is not being ended by it.

The cause of most tooth troubles is an ever-present film. You feel it with your tongue. That is what discolors—not your teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So it is that film, not merely food

debris, which the tooth brush must combat.

The tooth brush alone is inadequate. The film is clinging. It gets into crevices, hardens and stays. The old methods of teeth cleaning fail to dissolve it.

Dental science, after many years of searching, has found a way to combat it. Able authorities have proved this fact by convincing clinical tests. Leading dentists everywhere accept it.

This way is now embodied in a dentifrice called Pepsodent. And we gladly supply a 10-Day Tube for anyone to test.

## A Ten-Day Revelation

We ask you to try it, to watch its effects, then look at your teeth in ten days. It will change all your ideas on teeth cleaning.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly combat it.

This way is made possible by a new discovery. A harmless method has been found to activate the pepsin. Five governments have already granted patents. The old activating agent was an acid, harmful to the teeth. And pepsin must be activated.

We urge you to prove Pepsodent as dentists prove it—by actual application. See the results, read the reason for them, and decide for yourself about it.

Send the coupon for a 10-Day Tube. Use like any tooth paste. Note how clean the teeth feel after using. Mark the absence of the slimy film. See how teeth whiten as the fixed film disappears.

Do this for your sake and your children's sake. Learn the better way to clean teeth. The results will show you very quickly that this way is right. Cut out the coupon now.

PAT OFF

## SCHOOLS AND COLLEGES

METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES  
BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds is an ideal place to live in.

As a war measure, the course was reduced from three years to two years and six months. The cessation of hostilities will not end the need for nurses abroad; they will be needed, in large numbers for reconstruction work, and for the establishment of schools of nursing in the different countries of Europe for a long time to come. We plan, therefore, to continue the course of two years and six months.

For Information write to MISS AGNES S. WARD, Superintendent

DEAN ACADEMY  
FRANKLIN, MASS. 53rd YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment per mits liberal terms, \$125-\$150 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt.D., Principal

## BISHOP HOPKINS HALL

An endowed school for girls overlooked by Lake Champlain. Well equipped buildings. All outdoor sports. College preparatory and general courses. Write for booklet. Miss ELLIN SEFON OGDEN, Principal.

The Rt. Rev. A. C. A. HALL, President and Chaplain.  
Box R, BURLINGTON, Vt.

## NEW-CHURCH THEOLOGICAL SCHOOL

48 Quincy St., Cambridge, Mass.

Established 1866. Three years course. College preparation desired. The curriculum includes systematic study of the theological writings of Emanuel Swedenborg and spiritual interpretation of the Scriptures. Courses by correspondence when desired. For catalogue and information, address

WILLIAM L. WORCESTER, President

RANDOLPH-MACON WOMAN'S COLLEGE  
LYNCHBURG, VIRGINIA

One of the leading colleges for women in the United States, invites prospective graduates of approved four-year high schools to enroll for the session 1920-21. For further information, address THE REGISTRAR, Box 46.

Does Your Hand  
Itch for a Pencil?

If your hand itches for a pencil you may have in you the making of a great cartoonist. You do not have to be a genius. If you have a liking for drawing and develop it intelligently, there are many opportunities for you in this profitable profession.

Through the Federal Course in applied Cartooning, America's 32 greatest cartoonists will help you succeed. Among these men are Clare Briggs, J. T. McCutcheon, Sidney Smith, and Fontaine Fox. They show you by examples how they began and what were their stepping stones to success.

## "A Road To Bigger Things" Free

This interesting book contains studio pictures of the members of the Federal Staff and describes the Federal Course in detail. Write now for your free copy to:

FEDERAL SCHOOL OF APPLIED CARTOONING  
9461 Warner Bldg. Minneapolis, Minn.

## PACIFIC SCHOOL OF RELIGION

An undenominational union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. All privileges of University of California open to qualified seminary students. Term begins August 18, 1919. Address PRESIDENT C. S. NASH, Berkeley, Cal.

"Is that bird a sparrow?"

"No, Dad," says your youngster; "it is a wren."

Purple crackles look like blackbirds, but they are not.

You may think a cedar is a spruce, a beech is an elm, and you may bluff like anything when asked what a rhododendron is.

You may know lots about Nature, but it's fair to assume you don't know any too much. Send word to

## THE INDEPENDENT

119 West 40th Street New York

to send you for five days' free examination the new Pocket Nature Library. Splendidly printed, illustrations of flowers, trees, butterflies and birds in full color. If you don't want them, send them back. That's all there is to that. If you keep them, send \$5.50.

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

150-page illustrated catalogue free

Dept. 304, Springfield, Mass.

ESTABLISHED 1897

INCORPORATED 1904

covering America" for themselves when driven out of England by the insensate prejudice against anything and everybody even remotely German make lively reading. Fortunately, for them, the seventeen year old adventurers fall into the kindly hands of Mr. Twist, who is described as "a born mother," and who personally conducts the perilously pretty girls thru the United States, where they are no more welcome than they were in England. If the slender story wins sympathy for other young Germans innocent of any political or military activity, it will have fulfilled a needed mission and the author's purpose.

*Christopher and Columbus*, by the author of "Elizabeth and Her German Garden." Doubleday, Page & Co.

## How America Grew

"To the Allies in the hope of a better understanding," is the dedication of Prof. Max Farrand's remarkable little book, *The Development of the United States from Colonies to a World Power*. It is quite possible that the Allies need to understand us better; it is certain that we need to understand ourselves better. Most of us have studied American history in fits and starts, stories of the Revolution in primary school, a course on the reconstruction period in college, a life of Lincoln in odd moments. For all we know, the United States didn't develop, but just grew. Professor Farrand's book makes it so fascinatingly consecutive that you hurry on to find "what happens next," and events slip easily into their proper and proportionate places. You realize the relative importance of the cherry tree and the Homestead Act.

But perhaps the greatest value of the book lies in the angle from which it views the development of the United States. In his preface Professor Farrand quotes Emile Boutmy's statement that "the United States are before all an economic society; they are only secondarily an historical and political society." Then he goes on:

When the traditional, or conventional, point of view is once departed from, the most conspicuous, as well as the most significant, feature of American history becomes the expansion of a few thousand colonists scattered along the Atlantic coast in the early seventeenth century into a population of over one hundred millions, occupying the whole central portion of the North American continent and holding many outlying possessions. These people have developed distinctive traits and institutions that have become known as American. The original colonists were the subjects of European monarchs, and they have been joined by millions of people of all races and nationalities, mainly from monarchical states, yet they have established and have maintained not the purest but the greatest democracy the world has known. From humble beginnings they have risen to a commanding position in the realm of industry and finance, and they have become one of the leading powers of the world. The new history attempts to explain these things.

But the new history has so far been written chiefly for the student of history, not for the man in the street.

That is the author's reason for compressing the annals of the United States into one slim volume. It is a scholarly and skilful piece of work whose value will be appreciated by scholars but even more perhaps by the average man whose interest in the history of his country has been keenly stimulated in the past months, who wants his knowledge arranged and co-ordinated, who wants to understand why Americans are the kind of people they are today and to have some basis for figuring out what they will, or may, be tomorrow.

*The Development of the United States*, by Max Farrand. Houghton Mifflin Co.

### Uncensored Celebrities

*Uncensored Celebrities* ought to be read in fits and starts, but it is so very entertaining and such easy reading that you swallow it in great gulps and get your celebrities a bit mixt in your mind. E. T. Raymond's opinions about the great men of modern England are undoubtedly prejudiced, but that merely adds to their interest and the vividness of his swift, clever characterizations. He brings Lloyd George and Lord Milner and Sir Edward Carson and Viscount Northcliffe and all the other names you see in the papers every day very definitely to life. The sketches were published originally in *Everyman* and we should like to say that that would have been the ideal way to read them, at intervals in a magazine. We are afraid, however, that if we did say so Mr. Burleson might not be able to tell whether this is a book review or a skilfully veiled advertisement for the magazine.

*Uncensored Celebrities*, by E. T. Raymond. H. Holt & Co.

### Ireland

My aim in this book is to examine the condition of Ireland, to interpret its nationalism, to show the difficulty of its relation with England, to proceed from causes to consequences and then to remedies. The reader may easily differ from me in the end. . . . I shall have failed of my object if I have not improved his opportunity of judging the question for himself.

This is a book which is neither an indictment of England nor a brief for Ireland. With unusual insight and sympathy it rather preserves the delicate balance between the two. The situation is painted just as it is. Facts there are and conclusions, eloquent pleas and well merited criticism, all presented in a vivid and appealing manner with a dignity and beauty of style that makes literature of history and art of argument.

The Englishman, reading this book, should take up again, with fresh zeal and sympathy, the task of a satisfactory settlement of the Irish question, inspired to new efforts thru new comprehension. The Irishman reading it should consecrate himself once more to his country, but realizing that nationalism is a greater force when tempered by friendly understanding and a generous meeting of terms half way.

*Ireland A Study in Nationalism*, by Francis Hackett. B. W. Hackett.

## McCutcheon's Dresses of Imported Dimity for Girls

Reg. Trade Mark

MOTHERS who face the problem of providing Summer wardrobes for their daughters are invited to inspect our unusually attractive selection of Dresses of Imported Dimity.

*For the little girls*—White, Pink, Blue and figured. Many of the models are hand-smocked and ribbon-trimmed.

*For the older girls*—more "dressy" models for afternoon wear.

### Infants' Outfits

IN this same Department mothers and prospective mothers will find dainty Infants' Outfits, both imported and domestic. We are always glad to help in making up practical Layettes.

Our Mail Order Department will gladly furnish full descriptions and particulars of any garments mentioned and fill orders to your complete satisfaction.

## What's Happend

On the spot where the "Mayflower" left Plymouth, England, in 1620, the NC-4 landed May 31, 1919, finishing the first transatlantic flight. The whole trip from Long Island to England was 3925 knots; the flying time 57 hours, 16 minutes.

London policemen by a vote of ten to one decided to strike for recognition of their union, but the Government's threat to dismiss strikers and use the military to maintain order caused a postponement of the proposed action.

The subways of Paris are closed by a strike of the employees. The strike originated with the metal workers and has spread to the sugar refiners, house painters, dressmakers and coal miners. Altogether more than 250,000 are out.

On May 31 the Bolshevik fleet made another sortie from Kronstadt. The flagship was the battleship "Petropavlovsk" and she was followed by three other warships. The British attack with seven warships and after a fifty-minute engagement the Russians retired.

Greek troops have landed at Avialik on the Asia Minor coast north of Smyrna and have advanced from Smyrna to Aidin, eighty miles south. Their object, as explained by the Greek statement, is "to restore order and take a census."

High prices in Paris are going down. A military hut, turned into a temporary store, and under the supervision of a Secretary in the Ministry of the Food Supply, has shocked retailers into a semblance of reason. At the hut, householders may buy staple articles at cost plus transportation.

Strikers and returned soldiers took possession of the Provincial legislative chamber at Winnipeg and demanded the resignation of Premier Norris and his Cabinet on the ground of "incompetency to deal with the strike situation." Premier Norris told the crowd he would retain his office, and work to improve industrial conditions.

Senator Lodge and Senator Borah declare that they have seen copies of the full peace treaty in possession of private individuals in New York. The Senate Republicans are naturally enraged, since the Senate must still be contented with an incomplete cable summary.

Representative Esch, of Wisconsin, has introduced a bill amending the interstate commerce act. It permits consolidation of lines and pooling of earnings, provides for adjustment of conflicts between federal and state regulations, and in general extends and strengthens the Commission's authority.

The public debt of the United States is \$25,921,151,270. At the end of the Civil War the debt was less than two and a half billion dollars. Just before America's entrance into the Great War it was less than one billion dollars.

Twelve obsolete battleships of the United States Navy are to be used as targets or sold as old metal. They include the "Indiana," "Iowa," "Massachusetts," "Kearsarge," "Kentucky," "Illinois," "Alabama," "Wisconsin," "Maine," "Missouri" and "Ohio." The "Oregon" goes to its name state as a relic.

Now they are proposing a "sympathetic" strike for Mooney, the labor agitator sentenced to life imprisonment for complicity in the San Francisco bomb crime. A ten to one vote for a general five-day strike from July 4 is pouring in to the Chicago headquarters of the International Workers' Defense League. Of 30,000 labor unions asked to vote, only ninety have so far gone on record as against the strike.

Great pressure is put upon President Wilson by the Allies to induce him to recognize Admiral Kolchak as the ruler of all Russia, but the President has delayed action until Ambassador Morris reports Kolchak willing to guarantee democratic government.

The Swiss, Danish and Swedish Governments have replied negatively to the note of the Allies asking if they would join in the blockade against Germany in case Germany refused to sign the peace treaty.

Soaring rents in New York and other big centers may drop, if building contracts recently let can be pushed. A total of \$191,823,000 in territory east of the Missouri and north of the Ohio River was announced for April, and a single week in May added \$59,748,953. Residential construction leads.

Three millions more than the thirteen millions asked for was given by the nation to the Salvation Army in the drive for the Home Service Fund. The sixteen millions of dollars came in contributions from a penny up in every corner of the country.

The red and the black flags are outlawed by the first bill introduced in Congress to check Bolshevism. To advocate the overthrow of constitutional government by force or violence would be punishable by \$5000 fine, five years' imprisonment, or both.

The United States stood back of Great Britain to the extent of \$4,260,000,000, according to figures announced in the House of Commons giving the present indebtedness of the mother country to this republic.

At the National Women's Trade Union League meeting in Philadelphia, the platform demanded creation of an educational department to train women for equal jobs with men. Suffrage and restoration of the right of free speech, free press and free assembly were asked in resolutions past. One hundred women labor leaders were present.

Twenty-six out of twenty-eight governors of prohibition states, according to interviews made public by "dry"

forces, declare prohibition has been a benefit, and favor its continuance. Boston prohibitionists gathered the interviews, which included mayors and chiefs of police. Seventeen of nineteen such officials said crime has decreased notably.

The public wishes the railroads returned to their owners, according to a nationwide canvass of newspaper editors. A questionnaire sent to 13,424 editors of daily and weekly publications brought an 83 per cent response that their communities favored private management.

A bust of Walt Whitman was strategically smuggled into the Hall of Fame in New York University by a self-appointed committee of admirers, as a protest against the failure of the constituted authorities to recognize the poet among the Immortals. Elaborate ceremony marked the occasion. Guards and attendants did not interfere, as they supposed the stunt had official sanction.

More than fifty thousand American soldiers are buried on French battlefields. The greatest American military cemetery was opened with solemn ceremony on Memorial Day at Romagne, in the very heart of the Kriemhilde line. Those lying there gave their lives in the deadly Meuse-Argonne battles. The graves of 1562 United States soldiers and sailors were decorated in Britain on Memorial Day.

One steel freighter a week is the building record of the Submarine Boat Corporation at Port Newark, New Jersey. Three went down the ways on Decoration Day, each with a 5500 ton cargo capacity.

### Pebbles

A worm won't turn if you step on it right.—*New York Telegraph.*

They're calling them "The Allied Pow-wow-ers," now.—*Passing Show.*

Teacher—What is an alibi?

Bright Boy—Being somewhere where you ain't.—*Life.*

It is hard to tell whether a German Government has been set up or framed up.—*Brooklyn Eagle.*

"Is your son ambitious?"

"Very. He wants some day to pitch a no-hit, no-run game."—*Detroit Free Press.*

"When all has been said and done," she began.

"I never expect to see that day," he interrupted.

"What day?"

"When you've said everything."—*Detroit Free Press.*

A review of the *World Book* published in *The Independent* of May 10 mentioned the difficulty of finding in this encyclopedia articles or places likely to be listed under more than one heading. There is an index at the back of the last volume that remedies this inconvenience.

## A Comparison of Costs

A graphic picture of the high cost of doing business is shown by the rise in a long list of commodity prices during the past five strenuous years.

By the exercise of unparalleled economies, telephone rates have been kept almost unchanged.

The fact is, the increase in the cost of commodities has resulted in what is equal to a decrease in telephone rates. In other words: The dollar which was spent for the telephone has bought more than twice as much as the dollar spent for the commodity.

The activities of reconstruction which are now upon the nation have put a great burden upon the telephone. This condition has made necessary an advance in telephone rates.

This advance does not exceed an average of eight per cent; almost negligible as compared with the advances in other lines of industry, yet enough to cover the increase in the cost of operation.

Only through adequate revenue can there be assured the maintenance of a high standard of telephone service.

## New Lights on the Russian Revolution

(Continued from page 405)

geois has at his command. John Spargo, who is one of the sanest of socialists and was of special service to our Government in the war, has given us one of the best volumes on Bolshevism. He does not indulge in violent language—he is not that sort of a socialist. He does not pay much attention to the stories of atrocities and German bribery, tho he does not question that both have occurred. But he subjects the doctrine to a searching examination from the point of view of democracy and Marxianism and condemns it on both counts. Bolshevism, he says, is merely an inverted form of Czarism and he quotes Lenin to prove it:

Just as one hundred and fifty thousand lordly landowners under Czarism dominated the one hundred and thirty millions of Russian peasants, so two hundred thousand members of the Bolshevik party are imposing their proletarian will on the mass, but this time in the interest of the latter.

It is a strange anomaly that a system based exclusively upon an industrial proletariat should have found its greatest success in a country which contains only 5 per cent of that class and in which the peasantry, excluded by Lenin's definition from the working class, constitute 85 per cent.

Mr. Spargo traces the intricate history of the Russian revolutionary parties and shows how the Socialists in 1902 split in two, the majority (Bolsheviks) following Lenin, and the minority (Mensheviks) following Plechanov. At first the Bolsheviks were nursed by the Czar, later by the Kaiser. The most violent of the Bolshevik leaders in the Duma, Malinovsky, a close friend of Lenin, turned out to be a police spy and provocateur, and his fiery speeches attacking the Government and the bourgeoisie were written for him by Beletzky of the Police Department. When the war was declared the Bolsheviks and Mensheviks members, fourteen in number, united in a protest and abstained from voting.

Bolshevism, as the word is commonly used, has been defined by some wit as "any sort of social movement that scares you most to death." But while this sense may serve the purpose of ordinary vituperation it is necessary to get a closer understanding of Bolshevism if it is to be combated and counteracted. Here Mr. Spargo's clear-cut analysis is useful:

Instead of being fanatical idealists, incapable of compromises and adjustments, the Bolsheviks have, from the very beginning, been loudly scornful of rigid and unbending idealism: have made numerous compromises, alliances, and "political deals," and have repeatedly shifted their ground in accordance with political expediency. They have been consistently loyal to no aim save one—the control of power. They have been opportunists of the most extreme type. There is not a single Socialist or democratic principle which they have not abandoned when it served their political ends; not a single instrument, principle or device of autocratic despotism which they have not used when by so doing they could gain power.

They are not self-seeking adventurers, as many would have us believe. They are sincerely and profoundly convinced that the goal of social and economic freedom and justice can be more easily attained by their method than by the method of democratic Socialism. Still, the fact remains that what social ideals they hold are no part of Bolshevism. They are Socialist ideals. Bolshevism is a distinctive method and a program, and its essence is the relentless use of power by the proletariat against the rest of society in the same manner that the bourgeois and military rulers of nations have commonly used it against the proletariat. Bolshevism has simply inverted the old Czarist regime.

The Soviet was not something new, as so many of our American drawing-room champions of Bolshevism seem to think. The Soviet was the type or organization common to Russia. There were Soviets of peasants, of soldiers, of teachers, of industrial workers, of officers, of professional men, and so on. Every class and every group in the classes had its own Soviet.

IT was the misunderstanding between Kerensky and Kornilov that threw Russia into the hands of the Bolsheviks. If these two men could have worked together a few weeks longer Russia might have been saved the Red Terror. Seldom, if ever, has the world's history turned upon a finer pivot than the telegraphic conversation between the Premier and the Commander in Chief, and this conversation—by luck such as historians never had before—was recorded in full on the Hughes tape machine and is printed by Kerensky in *The Prelude to Bolshevism*. This volume consists of the stenographic notes of Kerensky's evidence before the Commission of Inquiry and his commentary on events. He does accuse Kornilov of being a traitor, but credits him with meaning well even when he demanded that the Provisional Government put all power in his hands, and when this was refused marched on Petrograd with the army. But it seems to hurt Kerensky's feelings that Prince Lvov should accuse Kerensky of keeping him awake singing operatic airs during the month he was in the Winter Palace. A valuable addition to the volume is a "Who's Who" and "Where's Where" of the persons and places named.

Doubtless it is natural for members of the ruling families of America to marry into the royal circles of Europe, still it does not seem right to hear a granddaughter of General Grant call the Countess Spéransky and the Princess Cantacuzène and to find her writing in a sickly, sycophantic fashion of her aristocratic associates. But laying aside our republican prejudices, the "Recollections of Romanoffs and Bolsheviks" that she has put in her *Revolutionary Days* contains much interesting material. For instance, Ambassador Francis told her that he had offered American troops to Kerensky but the offer was declined as unnecessary. It has been hard to understand the actions of the Russian Government previous to the revolution, but it is all ex-

plained when we hear that this policy was dictated to Minister Protopopov by the ghost of the murdered Rasputin. Princess Cantacuzène confirms the rumor that the revolution retarded the withdrawal of Russia from the war, for Premier Stürmer was about to make peace with Germany when he was overthrown.

General Basil Gourko, chief of the Russian Imperial Staff and Commander in Chief of the Western Armies, gives in his volume, *War and Revolution in Russia*, an authoritative account of the campaigns in Prussia, Poland and Galicia, and then of his struggles to get along with the revolutionists, ending with his imprisonment by Kerensky in the Fortress of St. Peter and St. Paul. He complains that the Allies expected more of the Russians than they could do and gave them too little aid in the way of munitions. Rennenkampf's invasion of East Prussia that culminated in the disaster of Tannenburg was, he says, due to an urgent message from France to the Grand Duke Nikolai asking for a demonstration from this direction to check the advance of the Germans on Paris. So, too, Brusilov's unfortunate invasion of Austria was undertaken in order to draw off the Austrians from Italy. But General Gourko does not mention that the fatal expedition of the British to Gallipoli was demanded by Russia.

My latest batch of books from Paris contains four on the Russian Revolution. Robert Vaucher, photographer for the Paris pictorial, *Illustration*, describes his personal adventures in the Bolshevik hell (*L'Enfer Bolchevik*). He got to Petrograd on May Day, 1918, when the Bolsheviks were fighting the anarchists in the streets, and he left in September at the height of the Red Terror. He puts down truthfully day by day what he sees and hears, but of course not all he hears is true. For instance, he gives a page and a half to the death of Madame Breshkovsky—who is living happily, or at least safely, in America.

At Moscow in the famous Zonn Theater an assembly was held of all of the personnel of the theater from the singers and actors to the men who sell programs and the women who open the box doors, not omitting the machinists and firemen. One of the employees addressed the meeting and declared that now, since everybody is equal before the law, the same treatment ought to be given to each whether star or attendant, leading man or prompter. The artist protested vigorously and declared they would never consent. To their great astonishment, the best actor of the troupe, Monakhof, a comedian of great talent, took the floor and declared to the employees and attendants, "I am altogether of your opinion. Every one ought to receive the same treatment. We are all equal." The assembly applauded him, crying, "There's a true Socialist. There's an artist who understands the needs of the people."

The next evening when the time came for the play, Monakhof had not appeared. What was the matter of him? What, he sick? How could he be replaced at the last moment? At last, a few minutes before the curtain rose, Monakhof appeared. He was in ordinary dress with a soft hat, a cigar in his mouth and seemed in no wise hur-

## For your Summer Outing— Go West

### Summer Excursion Fares To National Parks and Resorts of the West

Here are lakes and streams, for fishing. Here you can climb snow-capped mountains, descend canyon trails, or bathe in the blue Pacific. Here, too, you can "rough it." off the beaten path.

Your outing in the West also may include glaciers and geysers—big trees and petrified forests—Indian pueblos and prehistoric ruins. Fine motor roads everywhere, and resort hotels.

Complete information, including illustrated booklets, may be obtained free. Ask your local ticket agent to help you plan your trip—or apply to the nearest Consolidated Ticket Office—or address the nearest Travel Bureau, advising what National Parks, or what section of the Rockies, the Pacific Coast, or the Northern Lakes you are interested in.

ried "Harry up," they called to him, "You will be late." But he responded phlegmatically, "It doesn't matter. I'm not going to act tonight. I want to sell programs." Monakhof as program seller? He must be mad. The whole personnel of the theater gathered about. The incensed players approached and argued. "My friends," replied Monakhof, "We are all equal, are we not?" Agreed. "Well, this evening I am not going to play. Let the program seller replace me. Everyone in his turn. It is I who will sell programs." Another meeting was called on the spot and it was decided to return to the old system. When the play began after a long wait and Monakhof came on the scene the public which had wind of the affair applauded him energetically and chafed the program seller until he was sick of it.

The charge that the Bolshevik movement was secretly encouraged by the Russian Government before the war is confirmed by Serge Persky in the latest volume of his journalistic articles, *From Nicholas II to Lenin*. He has a photograph of notes of a speech delivered by Malinovsky in the Duma which had been OK'd and annotated by the Minister Makarof. *Pravda* ("Truth"), the official organ of the Bolsheviks, was subsidized by the Okhrana (secret police), and Lenin himself in 1910 or 1911 had relations with them. When this was exposed Lenin defended himself in the same fashion as when charged with receiving German aid:

It was not the Okhrana that made use of us but on the contrary we that made use of the Okhrana. Without doubt the Okhrana has rendered great services to our party without ever obtaining anything from us.

Altho all of these authors are strongly opposed to the Bolsheviks and we have nothing on the other side, still their standpoints are so diverse otherwise, that we may get from them a tolerably correct view of the early stages of the revolution.

"WHAT a Beautiful Pine."  
(That's what you might say.)  
"Yes," says your son, "it's a peachy blue spruce."

Makes you feel cheap. Better get next to some of this nature stuff. Send a request to THE INDEPENDENT, 119 West 40th Street, New York, for the Pocket Nature Library.

Four volumes: Birds, Trees, Flowers, Butterflies.

You will be sent these beautifully illustrated handy books "toot sweet." If you keep them send \$5.50. If you don't want them after five days to look them over, send them back.

been perpetrated, the loot has been divided by collusion between thieving generals on the Mexican side and thieving politicians on the American side.

It is no longer a case of protecting foreign rights in Mexico. It is a case of protecting humanity and helping the richest land in the world to throw off the incubus that has it clutcht by the throat. And do not forget that the devil-fish, known to science as the master incubus of nature, has a trick of clouding the waters with inky poison to make its "get away." There will be lots of inky poison before Mexico is cleand up; but cleand up it must be. The facts are coming out from the State Department now, and the mandatory for the clean-up has been laid on the United States.

If the United States declared for armd intervention now, it would simply unify the divided forces in Mexico against us for another era of bloodshed. There is a simpler, easier way.

When the crash comes which is now impending in Mexico, the United States will be invokt for help. Mexico cannot stand another revolution. Let the help go to Mexico unstintedly, help in money and in policing and pacifying, with American agents to supervize the spending of the \$500,000,000 that would put Mexico on her feet, and Mexican agents to work with the pacifying forces. There would be no war. Two months would turn the trick. We have spent \$150,000,000 on Mexico and our border patrol in seven years. It takes only \$150 a year to clothe, feed and train a Mexican child in a school, which could also be a clinic and center of friendship between Mexico and the United States. If the \$150,000,000 we have spent on a border patrol, which did not hinder the theft of 600,000 head of cattle, had been spent on schools, clinics and hospitals, there would have graduated in these seven years a million young Mexicans friendly to the United States. There would be no Mexican problem. At the great Missionary Conference in Columbus in June and July, this very program is to be laid down for Mexico. It is not a program to let little bodies suffer untellable defilement here and reap reward in a far-off Heaven. It is a program to transmute the Hell of Now in Mexico into a little of the Kingdom of Heaven "which is within you."

We have had campaigns to save Siberia, to save Serbia, to save Belgium. Multiply all that these countries have suffered by seven years instead of four; and you have Mexico's tally. Mexico is at our very door. Shall we save far-off lands and leave unhelped our nearest neighbor to the horrors of another revolutionary era?

New York

### A Correction

The photograph of the docking facility for trans-Atlantic air liners, published in *The Independent* of June 7 should have been credited to *Popular Science Monthly*, thru whose courtesy we were able to reproduce it.

## GOOD BOOKS

**THIS** is an age of serious reading. In every publication one is confronted by printed invitations to better oneself by systematic reading. And the results are quite as marvelous as they are printed. The reading of books that make one think deeply, cannot be otherwise than helpful in self-development. And such are the books which have been published by THE ABINGDON PRESS for one hundred and thirty years. A few recent ones are listed below. You will find quite a few minutes pleasant reading in the complete catalog which will be sent upon request.

### GIANT HOURS WITH POET PREACHERS

By WILLIAM L. STIDGER

Mr. Stidger is a preacher, but he is more than that—he is himself a poet-preacher with a genius which richly qualifies him to discuss other poet-preachers whom he knows and loves. "The interpretations are in a forceful yet simple style, revealing the writer's familiarity with the men of whom he writes and their work. They also show serious reflection and study, the cream of which is given to the reader in a charming literary manner."—*San Jose Mercury-Herald*.

12 mo. Nine Portraits of Authors.  
127 pages. Cloth. Net, \$1.00, postpaid.

### RECOVERED YESTERDAYS IN LITERATURE

By BISHOP WILLIAM A. QUAYLE

These days are certainly not conducive to leisurely meditation, and if any such luxury is to be enjoyed, it is probable that we must accept it second-hand. Happy, indeed, is he who has such an author as Bishop Quayle to bring to him the joyous reflections of his brilliant imagination. "He has a poet's joy in words and their connotations. . . . He has a joyous way with him, too, making his readers delight in those passages from the poets which he points out. . . . It is well to have so sane and ardent an interpreter of books come to the front and lead men's thoughts once more into pleasant paths and amid high thoughts."—*The Christian Advocate*.

Cr. 8 vo. 306 pages. Cloth. Net, \$1.50, postpaid.

### THE SHADOW ON THE DIAL

By ORTON H. CARMICHAEL

"The chapters are in the form of extracts from a diary, and are the reflections of a person who sees

and appreciates the beauty of the earth and the changing seasons, and who sees beyond these physical beauties to the spiritual beauty hidden at the heart of the world. The book is illustrated from striking photographs."—*The Indianapolis News*.

Cr. 8 vo. 214 pages. Cloth. Net, \$1.25, postpaid.

### FARES, PLEASE! AND OTHER ESSAYS ON PRACTICAL THEMES

By HALFORD E. LUCCOCK

"The beauty of these essays is that not one of them will tire you. They are all brief—thirty-eight of them—and they are so strikingly written that they seem even briefer than they are. Original, refreshing, suggestive and pleasing, they will make the book a favorite in the hands of every serious-minded reader."—*Michigan Christian Advocate*.

12 mo. 203 pages. Cloth. Net, 75 cents, postpaid.

### WITH THE CHILDREN IN LEWIS CARROLL'S COMPANY

By WILLIAM V. KELLEY

Whoever loves children will surely find in this sunny volume much innocent merriment and unflinching satisfaction. The author's playful attempt to prove a case of dissociated personality against Charles L. Dodgson, the grave mathematician and Oxonian cleric, and Lewis Carroll, creator of Alice in Wonderland, will doubtless be turned by many readers against himself, the courtly and dignified Editor of the *Methodist Review*, and the author of these frolicsome, almost hilarious, pages. "All lovers of lads and lassies and literature", declares *The Methodist Protestant*, "will fail to read this only at the cost of their own impoverishment."

12 mo. 140 pages. Cloth. Net, 75 cents, postpaid.

##### I. Grammar and Rhetoric.

1. Select any ten important articles in this number of The Independent. Answer the following questions concerning the first sentence of every article selected: (a) Is the sentence simple, compound, or complex? (b) Does the sentence begin with a noun, a noun-phrase, a phrase, a subordinate clause, an adverb, an adjective, a participle, or a pronoun? (c) Does the sentence contain an adjective clause? An adverbial clause? What does every adjective or adverbial clause modify? (d) Give the syntax of every word ending in "-ing" that may occur in the sentence. (e) Point out and explain every example of apposition that may occur in the sentence. (f) Point out, and explain, every example of inverted order. What is the purpose of every inversion. (g) Is the sentence loose, balanced, antithetical, or periodic? (h) Does the sentence emphasize time, place, event, person, number, or some other important fact? What method of construction directs the emphasis?

2. Answer the following questions concerning the first paragraph of every article selected: (a) What is the topic sentence of the paragraph? (b) By what method is the paragraph developed? (c) What is the rhetorical purpose of the paragraph? (d) Point out the words employed to give coherence within the paragraph. (e) What proportion of the words are classical in origin? Substitute words of Anglo-Saxon origin. What is the effect upon the paragraph? (f) Explain the reason for using any of the following marks of punctuation that may occur in the paragraph: colon, semicolon, apostrophe, quotation marks, comma.

##### II. Spelling.

1. Learn to spell the following words: plebs, scite, mandatory, tonnage, Czechoslovakia, Yugoslavia, Hedjaz, Esthonia, Lithuania, Ukraine, Philippines, colleagues, disintegration, Bolshevik, bourgeois, anarchist, proletariat, propaganda.

2. What is the meaning of every one of the above words?

##### III. Literature.

1. Explain what is meant by "Free Verse."  
2. What advantages are gained by "Free Verse"?  
3. What is the opposite of "Free Verse"?  
4. What advantages are gained by the opposite of "Free Verse"?  
5. Name some of the most prominent living poets. Tell something concerning the work of every poet you name.  
6. Name some of the most prominent living writers, other than poets. Tell something concerning the work of every writer you name.  
7. Name the different types of books that have been reviewed in The Independent during the year. Define every type you name.  
8. What has appeared in The Independent during the year that might be used in illustration or in explanation of any one of the following: "The Vision of Sir Launfal," "Treasure Island," "Ivanhoe," "As You Like It," "Julius Caesar," "The Sir Roger de Coverley Papers," "Macbeth," "Burke's Speeches on Conciliation," "Lincoln's Addresses."

##### IV. Public Speaking.

1. Make a list of ten subjects, drawn from important topics of interest during the year, suitable for extemporaneous speaking. Prepare to speak five minutes on any one topic.  
2. Make a list of ten propositions, drawn from important questions now before the world, suitable for public debate. Prepare a brief for a debate in support of the affirmative or of the negative of any proposition.  
3. What important speeches have been reported in The Independent during the year?  
4. What is the importance of public speaking today in the United States?

##### V. Patriotism and Loyalty.

1. Give a talk in which you show how The Independent has aided you to be a better citizen.  
2. What have you learned from The Independent that has increased your respect for the Government of the United States, and your admiration of its principles?

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. "The League and the Senate."

1. "Within each political party there is an element that is anxious to see the League of Nations made a partizan issue." Who are the leaders of these elements? What is their reason for wanting to make the League a partizan issue?  
2. Why are such senators as Lodge, Penrose, Brandagee, Knox, Watson and Smoot making no public statements on the League?  
3. "The peace treaty will start on its way toward ratification in the Senate with a tremendous handicap." What is the basis for this statement?  
4. What is the attitude of Senator Hitchcock toward the ratification of the treaty? How do you account for this attitude?  
5. Why does the author believe that "opposition to the treaty and the covenant will collapse . . . and that the treaty will be ratified without radical amendment?"

##### II. "United States Among the Nations."

1. What reasons have you to believe that the United States will in future be one of the "Big Four" among the nations?  
2. "Actually America had been one of the great powers since the Spanish War," etc. What proofs can you give of this assertion?  
3. Professor Giddings gives four elements of strength as "our chief assets." Name the four. Which one, in your judgment, should head the list?  
4. What "weaknesses and defects" does he point out? What remedies for these weaknesses do you suggest?

##### III. "Nation Making and Nation Breaking."

1. "The new map of Europe will look more like that of the seventeenth than that of the nineteenth century." Study the map of Europe as it existed after the Treaty of Westphalia. Test the above statement by this map.  
2. Locate the "seven new nations" which the Paris Conference has already put on the map. What other new nations may possibly come into existence as a result of the war?  
3. What does Mr. Slosson mean when he says: "The nineteenth century was an age of integration, of imperialism"? What are his proofs?

##### IV. "New Light on the Russian Revolution."

1. Which of the books discuss in this article seems to you to be most worth reading?  
2. Discuss (a) the Sukhomlinov revelations, (b) the Kornilov coup d'etat, (c) Mr. Long's conclusion as to how order is to be reestablished in Russia.  
3. Summarize John Spargo's conclusions as to (a) the nature of Bolshevism, (b) the strength and weaknesses of the Soviet form of government.  
4. What evidence does this article present that "the war in great part originated in the covetousness of two countries, Russia and Germany"?

##### V. "The German Protest."

1. Is there any justice in Count Brockdorff-Rantzau's contention that the proposed treaty represents "the victorious violence of our enemies"?  
2. Summarize the German protest under these heads: (a) economic provisions, (b) territorial provisions, (c) interference with internal organization.  
3. What are the counter-proposals made by the Germans? Do any of these strike you as worthy of consideration?  
4. The newspapers speak of the French attitude toward the German counter-proposals as uncompromising, the British attitude as conciliatory, the American as non-committal. How do you account for these attitudes?

##### VI. "Mexico Is Our Next Job."

1. "Four embassies have notified the Mexican Government that there must be a clean-up." What active steps, if any, can each of the four nations represented take in bringing about the clean-up?  
2. Give the facts as brought out by the author about (a) the Mexican railroads, (b) security of life and property, (c) the oil industry, (d) political conditions.  
3. Why may it be said that the United States has a special mandate to set things right in Mexico?  
4. What method does the author propose for bringing about settled conditions in Mexico?

# Writes a Strong, Rich Blue

Every bottle of Carter's Writing Fluid is uniform in strength. If you have been having trouble with your ink, if it has been weak or muddy in color—

*if you want a clear, snappy color that flows freely from your pen, that makes writing a pleasure, then ask for*

## CARTER'S WRITING FLUID

The intensity of the Carter Blue is an indication of Carter Quality. No dye, however good, can be successfully incorporated with a poorly developed or muddy base. The pleasing Carter color may be traced directly back through the Carter laboratories

—to the rigid selection of raw materials and their proper handling,

—to the nine exacting laboratory tests to which each lot of ink is subjected,

—to constant experimentation guided by sixty years of experience as manufacturing chemists,

—in short, to the highest standards of manufacture, reinforced by our laboratory ideal,

*"Nothing so good that it  
can't be better."*

## Congress Gives Thought to Labor

TO all outward appearance the Senate of the United States at this time is thinking of nothing but the treaty of peace and the League of Nations and the political considerations therein involvd. These appearances are deceptive, for the Senate, and the Congress as a whole, is giving more quiet thought to domestic issues at present than at any time since the United States became associated with the Allies in the war. Uppermost among these issues is the problem of labor.

Three events have servd to compel Congress to begin the collection of its thoughts on the labor issue. They are the opening of the thirty-ninth annual convention of the American Federation of Labor at Atlantic City, the calling of a nation-wide strike of commercial telegraphers, and the continuation of the general strike in Canada.

Congress feels it does not possess the information upon which to deal intelligently with the labor problem at this time. Except in a very general way, it does not know what labor wants. It is much better informd on the wishes of organizd capital. Senators and representatives have had their eyes closd to the labor problem, hoping that in some way it would solve itself. Members who have made serious individual efforts to understand the attitude of labor can be counted on the fingers of two hands.

These men say labor wants something it is not within the power of Congress to grant by legislative enactment. Labor wants a new status in American life. It wants responsibilities even greater than those it dischargd during the war. And with greater responsibilities it wants greater respect.

Students of labor affairs in Congress are unanimous in asserting that labor believd what it was told about the coming of a new world after the war. Its expectations have not been fulfilld. Day by day, almost unconsciously, labor is gathering strength and determination to compel their fulfillment.

Congress feels instinctively that present conditions are tending toward a show down between cap-

ital and labor. That is the reason for its deep interest in the telegraphers' strike. Is this the beginning of an American labor war? Congress would like an answer to that question. Men in touch with the whole situation say it is not; that the time is not ripe for labor to strike with full force; but the time will come when labor will throw down the gauntlet unless important concessions are forthcoming in the meantime.

American labor unions never have been as strong as they are now. The burdens the workers carried during the war have brought a new sense of confidence in their power. Their overtime pay during the war has fortified them financially for a protracted struggle, if open combat is forst. The position of the employer is made difficult by the era of prosperity that is in prospect—a prosperity in which he cannot share without the cooperation of the workers.

The nation that will dominate the world in the future, Congress believes, will be the nation that is able to secure full coöperation of capital and labor, with neither wasting its effort on strife. Congress cannot order such coöperation. Except by example in the legislation it enacts, Congress can do nothing to secure the readjustment of relations between employer and employee that its foremost thinkers believe to be necessary.

Such senators as Borah, Johnson and Kenyon feel that the country would not be insurd against a labor war in the future, even if all the paternalistic labor legislation that has been proposd in the two houses were enacted into law. Many of these measures are important, they hold, but the most important adjustment—the only adjustment that will give promise of industrial peace—must be made between employer and worker.

The more important labor measures now before Congress are bills for the enforcement of a national eight-hour day; for vocational training and rehabilitation of those injurd in industry; for setting up an Industrial Relations Commission for the adjustment of labor disputes; for creation of a National Labor Exchange; for a Public Works Commission to

Wide World

## Leaping from Plane to Plane Three Thousand Feet Up

International Film

Wide World

Barnum & Bailey's most hair-raising thrillers will soon look slow if circus aviation develops at the pace set by Lieutenant Ormer Locklear. This acrobatic young airman acts as if his plane, or pair of planes, were a gymnasium and a well-equipped gymnasium at that. He hangs head down from the chassis, walks the length of the wings, swings on a rope ladder suspended from an aeroplane and jumps from it to land safely on another plane. All this while the machines are flying at high speed. These photographs were taken at Atlantic City where Lieutenant Locklear did his stunts at a height of 3000 feet

provide buffer employment during periods of industrial depression and for systems of unemployment insurance, health insurance and old age pensions. In addition, there are many measures for allotting lands to returned soldiers and industrial workers who wish to go back to the land. Not all of these bills will be enacted this session, or even next session, unless the attitude of labor becomes more menacing than it is at present.

As indicating the changing attitude of Congress toward the workers, it is significant that no demands for repressive legislation to deal with radical tendencies followed the bomb outrages by the anarchists two weeks ago. Leaders of both houses said the Government had ample power under existing statutes to deal with any dangerous radical activities. If a resolution to repeal the espionage act were called up before either the House or the Senate at this time, it is practically certain that it would be approved.

The bomb outrages did call forth a demand for the revision of the immigration laws. Such revisions as have been suggested labor is not expected in any way to oppose. The suggestions fall under three heads:

1—That all immigration be suspended for a period of two, four or six years;

2—That all aliens in the United States be registered at regular intervals for a period of years;

3—That aliens who relinquish first naturalization papers to escape the draft, and all preachers or advocates of the overthrow of the government by force, be immediately deported.

The Government already has power to deport aliens who preach revolution by force. Opposition to the proposal for the suspension of immigration is expected to come only from employers who foresee a shortage of labor when industry gets going at full speed. Their influence will probably be sufficiently strong to prevent its enactment.

There is some sentiment in both houses for taking the administration of the immigration laws out of the hands of the Department of Labor and giving it to the Department of Justice, which would be expected to pursue a more vigorous policy.

There is little fear in Congress that orthodox Bolshevism will gain any foothold in the United States. The usual comment is that so long as Bolshevik leaders wear long beards and go by unpronounceable names, their doctrine will appeal only to the American sense of humor.

However, there are some modified forms of the Russian doctrine that might be attractive to American workers if they went by a different name. That is why Congress would like some additional information on the Canadian strike. There is some apprehension that the "One Big Union" idea, smacking as it does of a dictatorship by the proletariat, may spread to the United States. The threat of a propaganda invasion of this country is seen by some members of Congress in the remark by a Canadian labor leader that "there are twenty-three railway lines crossing the border—and some roads."

The opposition to the Seattle plan of twelve industrial unions instead of the present 120 craft unions, the failure of the radical wing to make any deep impression, and the favor in which Samuel Gompers was held, were the three outstanding features of the American Federation of Labor convention most pleasing to the membership of Congress.

Some members are warning, however, against banking too strongly on the moderation of the proceedings on the floor. They desire to know what went on in the committee rooms before reaching conclusions as to the attitude of workers. Industrial unionism, altho opposed as a general policy, is being attempted by the American

Federation of Labor, they point out, in the steel mills at Pittsburgh. The spread of the system to other districts that the Federation has had difficulty in organizing is practically certain if it meets with success at Pittsburgh.

Congress has been impressed by two things in the Canadian general strike. The first is the fact that the workers have not confessed a lack of confidence in their power by resorting to violence. The second is the failure of the Canadian Government to come forward with a constructive policy for meeting the situation.

The failure of the American Federation of Labor convention to approve a general strike on July 4 in behalf of Thomas J. Mooney is commended by members of Congress, but it is recognized that, should such a general strike be called in the near future, the American Congress could propose no better policy for dealing with it than did the Canadian Government.

## Labor Takes Thought to Itself

NOT only Congress, but the whole world of industry, is giving more or less quiet thought to the problem of the relations of capital and labor. In many places something more than thought is being applied. Winnipeg has had a month of thoroughly abnormal life because of its general strike. The end is still to come. On Tuesday of last week a three hours' riot took place in the streets between strikers and the constabulary, who had been recruited largely from returned soldiers to take the place of the regular police. Most of the members of the old police force had been dismissed by the city authorities because they had refused to pledge themselves to give up their union and to indulge in no sympathetic strike.

That appears to be the crux of the whole matter in the Winnipeg situation—the sympathetic strike. It has been dramatized in the slogan, "One Big Union." The right of workers without direct grievances of their own to strike in sympathy with striking workers in other concerns and other industries is upheld by the work-

Hoarding in Brooklyn Daily Eagle

When truth is kept within doors lies come out at the window

ingmen who have put Winnipeg into a state of suspended animation and denied by the employers.

The *Call*, New York's Socialist newspaper, gives this picture of the situation from the beginning:

The general strike was successful beyond the dreams of those originally involved. Unions struck spontaneously without request and unorganized and unaffiliated workers came out in such thousands that the ordinary life of the city was brought to a standstill. The strike committee was thus compelled by conditions to become a sort of political and industrial government. It had to see to it that the population did not starve and that the health and general welfare of the city were preserved. The bakers, milk drivers, and other food workers; the street cleaners, and the theatrical workers were, therefore, directed to return to their jobs. Wherever it was found that unnecessary suffering might result, the proper adjustments were made. The striking pressmen and stereotypers were also, it is asserted, allowed to go back to work on condition that the newspapers cease printing alarmist reports and refrain from inciting to violence.

There is nothing revolutionary about the Winnipeg strike, at least in intent. Its promoters haven't the least intention of overthrowing any government. The strike grew solely out of the refusal of three metal manufacturers to deal with a federation of metal crafts, which declared that the old plan of negotiation by separate crafts was weak and outworn.

A dispatch to the *New York Times* from Winnipeg, under date of June 10, however, declared:

The sympathetic strike of the Winnipeg iron workers, which began on May 15, was considered broken today, so far as its effect on the safety, welfare and convenience of the general public is concerned. It was estimated that about one-third of the men and women involved in the sympathetic walkout have returned to work, and many others applied for their old positions.

The same dispatch, however, reported that "7000 volunteer citizen soldiers are assembled at various barracks, 700 veterans of the Fort Gray and Strathcona Horse, just back from France, are ready for a call, while at the Northwest Mounted Police barracks, 400 'mounts' have their horses saddled." It was "hoped" that limited service on the city's traction lines would be resumed in a day or two.

The ambitious strike of the operators of the Western Union and Postal Telegraph companies, by which the Commercial Telegraphers' Union hoped to tie up all the wire lines of the country, did not begin auspiciously for the strikers. It was called for the morning of June 11; after it had been under way for twenty-four hours the estimates of the workers and the employers as to the number of men on strike were wide apart. Strike leaders asserted that from 15,000 to 20,000 operators had left their keys. The head of the Western Union declared that of its 40,000 employees 175 had stopped work; while the manager of the Postal Company confessed to between 1000 and 1500 striking employees.

The strike was another case of the sympathetic strike. The trouble began in Atlanta with a strike of telephone

and telegraph workers in protest against the discharge of certain telephone operators who had joined the Commercial Telegraphers' Union. The strike received scant sympathy from Postmaster General Burleson, who merely sent post office inspectors to Atlanta to investigate the cases of discharge.

Last week the Postmaster General took abrupt action to return the operation of the wires to the companies to which they belong. The act was seized upon by the union officials as an attempt to avoid the embarrassments of the strike and to shift the responsibility back to the companies, whose managers, especially in the case of the Western Union, were known to be strongly opposed to the principle of collective bargaining. The strike was immediately extended over the southeastern states and, some days later, over the entire country.

The question involved is that of union recognition and collective bargaining. The Western Union officials refuse to recognize a union which is not made up exclusively of their own employees. They have encouraged the formation of an association of Western Union workers, thru which the company extends certain benefits to its employees. This organization is of the type to which organized labor always and

everywhere violently objects, since it is a blow at the solidarity of labor and, in the belief of the exponents of organized labor, an attempt to "chloroform" the workers into insensibility to their own best interests. Just before the big strike was called the president of this organization sent telegrams to the locals all over the country, announcing that the company intended to pay the sum of \$1,000,000 increased back pay to loyal workers. The union officials asserted this was a bribe to keep the workers from supporting the strike.

Mr. Newcomb Carlton, the president of the Western Union, who is a staunch foe of the theories and practices of organized labor, admitted that 260 employees "known to hold radical views" were asked if they would remain at their posts in case of a strike, and that those who said "no" were thereupon discharged. The Western Union, therefore, apparently denies the right of its workers to strike. This is precisely what Mr. Burleson tried to do in the case of the New England telephone girls. But the Postmaster General had to come down, with more speed than grace. It remains to be seen whether Mr. Carlton will have better luck.

## General Wood Speaks Out

**A**MONG the men who already, a year before the nominating conventions, are suggested as Republican candidates for the Presidency, no name is mentioned with more frequency and more enthusiasm than that of General Leonard Wood. During the war there was a widespread feeling that General Wood, senior major-general of the army, had not been accorded

The explosion that the anarchists intended to destroy the home of Federal Judge Thomson in Pittsburgh fell one house short and tore this hole under Mr. B. P. Cassidy's veranda next door

fair treatment when he was prevented from going to France and kept at a training camp in Kansas. But a grievance hardly makes a substantial platform for a political campaign. Nor does a friendship, and another claim of Leonard Wood to the popular interest is his long time intimacy with Theodore Roosevelt. If General Wood's candidacy were to be based primarily upon these two grounds, it would hardly need to be taken seriously. The voters of the party will want to know more about him than that.

The address delivered by General Wood at the Union College commencement last week indicates that there is more to be known. In it he set forth frankly and vigorously his beliefs on some of the questions and responsibilities that face the American people in these days of world reconstruction.

General Wood made a strong plea for understanding and appreciation for the four million men who left their homes and occupation ready to do "all that a good citizen and soldier could do to insure the successful prosecution of the war." He pointed out that the men who did not get overseas had done their part just as truly as those who did. Of all these men he said:

Most of the men are going back either to their farms or their old jobs. There is a certain proportion who want a change. They want something new. It is hard for them to settle down. The excitement of battle is still in their blood. Some of them have spent their money. They are a bit uneasy; possibly a bit unreasonable. We must be patient with them and do everything we possibly can to reestablish them in some line of occupation for which they are fitted. We want them to go back to their homes realizing that the Government has appreciated their sacrifices and understood the value of their service. Their influence in this country is going to be a very powerful one, and we want each and every one of them to go back to his place, wherever it may be, feeling that his sacrifice has been understood and appreciated. If we do the right thing toward these men, we shall have in the home of each one of them a center of patriotism and a spirit of service which will go far to keep alive a sound patriotic spirit.

General Wood emphasized vigorously the need for a strong national spirit, a high standard of true Americanism, not only for what it will accomplish at home, but what it will achieve for the world at large:

In urging the building up of a strong national spirit, I do not mean that we are to be lacking in international charity or in the spirit of international helpfulness, but if we have a strong and vigorous national spirit, we shall be a real power for good. We want a spirit which will stand for international fair dealing and a willingness to help in world crises, such as that thru which we are now going. In other words, "we want to speak softly, but carry a big stick," that is to say, be just and fair, but also be strong and ready to support the right, not only with words, but with force if necessary.

On the crucial problem of the relations of capital and labor, the problem which looms larger than any other on the world's after-the-war horizon, General Wood urged a fuller measure of coöperation and a more complete assurance of justice for the workingman:

We must do all we can in this period of readjustment to maintain the best possible relation between labor and capital, for they are interdependent. United they stand, sepa-

Chancellor Renner

Chancellor Karl Renner, the head of the Austrian peace delegation, arriving at St. Germain, where he received the terms of peace prepared for Austria by the Allied Commission. Dr. Renner's speech was in a conciliatory tone, contrasting strongly with Count von Brockdorff-Rantzau's speech for Germany. Dr. Renner went out of his way to praise the generous relief work undertaken by the Allies

rated they fall. We must do everything we can to help on good business, for on it depends national prosperity. Labor and capital in this country must work together in order to meet the problems which are going to follow this world's war. We do not wish an autocracy of either capital or labor, but a real democracy in both characterized by a spirit of coöperation and helpfulness.

We must inject more of the human element into our relations with those about us, whether they be our associates or our subordinates—more gathering about the table and discussing matters fully and frankly. We must recognize that the workman is neither a machine nor a commodity, but that he is a collaborator with capital. Individual capacity and ambition must receive encouragement and recognition. The employer must recognize the dignity and status of the worker and every consideration due him. The closest possible contact and the fullest understanding should be maintained between employer and employee.

Arrangements for the adjustment of grievances must be provided, which will work smoothly and promptly. We must do all we can to improve the worker's living conditions, to make his surroundings decent and attractive to himself for reasonable recreation with his family during the hours of daylight. He should receive a wage that not only permits him to keep body and soul together, but enables him to lay by something for the future.

If these conditions are to be obtained and maintained, labor must recognize that high wages can only be maintained under conditions of high production and high efficiency. Capital must be paid in accordance with the risk of the enterprise; those who direct, who plan, must be paid. Labor must be adequately paid, and after this, if anything remains, comes the question of equitable division. The more progressive, intelligent, and far-seeing are already beginning to give to labor a share of this excess.

The main thing is for labor and capital to pull together in the present great crisis, remembering that only thru coöperation, frank and full understanding and mutual concessions can the wheels of industry be kept going.

General Wood urged the continuance of thrift and economy; the permitted use of but one language in our schools; a national budget system; the conservation of natural resources; the better physical development of our youth; the paying of more attention to our schools and the higher payment of teachers; the maintenance of that fine feeling which exists between ourselves and the Allies; the elimination of undesirable immigration; and the establishment of a sound system of national preparedness, "a system not unlike the Swiss in its general character, but embodying much of industrial and vocational training."

The Wood address, with its directness, its vigor, its concreteness and its insistence upon justice, fair dealing and aggressive Americanism, could not be anything but welcome to those who admired and loved those qualities in Mr. Roosevelt. A couple of familiar phrases—"walk softly and carry a big stick" and "to spend and be spent"—accentuated the Rooseveltian tone of the speech. But neither the phrases nor the general method gave any suggestion of imitation. They were used as by a man whose natural temper and native habit of mind they suited and expressed.

General Wood has performed a service to the public by making it clear just where he stands. He has done himself good service by his frankness and his abstention from partizan criticism or bitterness.

## The Peace Negotiations

**T**HIS has been a toilsome and anxious week at the Paris conference. The objections raised by Germany have revealed the weaknesses of the treaty and reopened sore questions on which a specious agreement had been reached. The peace plenipotentiaries, besides coming to an agreement among themselves and securing an acceptance of their conditions by the enemy, will have to take into consideration the popular feeling at home and to confront the possibility of the rejection of the treaty by their own parliaments.

The work of the conference is under attack from opposite sides. Its terms have been bitterly denounced in certain liberal, labor and radical circles of France, England, America and neutral nations as an imperialistic and capitalistic peace, ruinous to Germany and dangerous to the peace of the world. On the other hand, conservative opinion regards the terms as too lenient and is opposed to the League of Nations.

It is said that Premier Lloyd George, who started his career as a radical and still derives a large part of his support from that quarter, is in favor of considerable concessions, that Premier Clemenceau is strongly opposed to any changes and that President Wilson agrees most nearly with Clemenceau on this point but is willing to make certain modifications if these will be acceptable to both parties. The President in the *Matin* denies the charge of his critics that he has abandoned his principles:

I am convinced that our treaty project violates none of my principles. If I held a contrary opinion I would not hesitate to confess it and would endeavor to correct the error. The treaty as drawn up, however, entirely conforms with my fourteen points.

The most vulnerable points of the treaty are the extent of the indemnity, the manner of its collection, and the alienation of territory without the consent of the inhabitants. The German plenipotentiaries ask to have the indemnity fixed at a definite sum to cover actual cost of reparation, and they proposed a hundred billion marks (\$25,000,000,000) as a possible maximum. This is about as much as Germany, in the opinion of some of the Entente experts, will be able to pay, but the total of the claims against Germany amounts to over \$150,000,000,000. Both Lloyd George and Clemenceau have led their

people to expect more than could possibly be extracted from the enemy and these expectations will have to meet with disappointment. The French Government has relied upon sweeping indemnities to repay the cost of the war instead of raising it so far as possible by taxation, as has been done in England and America. Consequently, the French financial system is seriously endangered if the indemnity is fixed at any practicable sum. It is now suggested that Germany be required to pay five billion dollars down and after two years the balance of some twenty-five or thirty-five billions may be determined upon.

Probably some restrictions may be placed on the Reparation Commission, which, according to the first draft of the treaty, would give to Germany's enemies and trade rivals the power to regulate in detail the industries and finances of Germany. The clause by which foreign troops in unlimited numbers are to be quartered on German soil for an indefinite period at Germany's expense is also open to criticism, and probably some limitation will be placed on this.

The German population of Upper Silesia protest against being handed over to Poland without their consent and declare they will fight to the last man rather than submit to Polish rule. It is proposed to amend the treaty on this point and permit a plebiscite to be held. Then if the people vote to join Poland, as they probably will, some arrangement will be made by which Germany can buy coal and metals from the Silesian mines.

Probably the treaty itself will not be altered, but the necessary ameliorations and interpretations embodied in an appended letter.

## The Treaty Text

**W**HEN the proposed treaty was presented to the German plenipotentiaries at Versailles, May 7, a synopsis of it, of about one-tenth its length, was given out to the press of the world. The Allied and Associated Powers agreed among themselves not to make public the entire text in detail until after its signature. But the Germans, there being no stipulation to the contrary, immediately began to publish it in their newspapers, and French, English and German versions were soon on sale in pamphlet form in Germany and in neutral countries. But it was not allowed by the censors

Dr. Melchior, Dr. Landsberg, Herr Giesberts, Count Brockdorff-Rantzau, Herr Leinert, Professor Schucking.

The six German delegates at Versailles are shown here listening to the terms of the peace treaty as presented by the Allies. On the extreme left is Dr. Melchior, next to him Herr Leinert, then comes Dr. Landsberg of the fiery red beard (representing proletarian classes of Germany). The next is Count Brockdorff-Rantzau, the leader of the group. After the Count comes Herr Giesberts, and Professor Schucking is on the extreme right.

to be mailed or cabled to the United States. Thirty-five copies were sent over to the State Department at Washington, but these were kept under seal.

President Wilson is said to have favored publicity from the first, and the French Foreign Minister told the Chamber of Deputies that he desired the release of the economic and financial clauses, but Premier Lloyd George is supposed to have vetoed the proposal. The full text of the League of Nations Covenant and the International Labor organization has been released previously. The French censorship, which is particularly strict, did not permit even a brief outline to appear in the papers at the time of the delivery.

The United States Senate felt aggrieved at being excluded from the document on which it was eventually to pass, especially after Senator Lodge had reported having seen a copy in private hands. On June 9, a copy brought from Paris by an American correspondent was published in the papers, and the Senate, on motion of Senator Borah, ordered it printed in the *Congressional Record*. The copy which Mr. Lodge had seen was shown him by former Secretary of State Root, who had obtained it from Henry P. Davison, head of the League of Red Cross Societies. It had been brought from Paris by Thomas W. Lamont, one of the financial advisers of the American mission.

A comparison of this text with the official summary does not disclose any sinister reason for the secrecy, as had been alleged. The summary seems to be as complete and accurate as such an extreme condensation can be. But of course every line of such an epoch-making document is of importance and will repay careful study.

The treaty as a whole impresses one as much more severe on Germany than one gathers from the summary. This doubtless was why the Germans published it at home and in neutral countries, in the hope of gaining sympathy. One instance is the Sarre basin. This was demanded by France and allowed by Russia in the secret agreement between these countries, but since the territory is undeniably German its annexation was contrary

to the President's principle of self-determination. France, however, had an unquestionable right to compensation in kind for the destruction of the coal mines of northern France, and the treaty, by ceding to the French Government "full and absolute possession with exclusive rights" to the mines of the Sarre basin for fifteen years, makes it practically certain that the territory will eventually go to France. For the French State will own and control all the works, machinery, railways, power plants, shops, electric lines, stores, dwellings, schools, hospitals, "and in general everything which those who own or exploit the mines possess or enjoy for the purposes of exploiting the mines and their accessories and subsidiaries." The French may dispossess all the German owners and workmen and substitute their own men. The French workmen introduced may belong to French unions. French schools will be established to teach the language to employees and their children. The Sarre will be governed by a commission appointed by the League of Nations and composed of one native not a Frenchman, one Frenchman and three from other countries than France or Germany. The inhabitants are allowed to retain their local assemblies, religious liberties, schools and language. Any of the inhabitants have the right to move out at any time. At the end of fifteen years a plebiscite will be taken, when the men and women now resident will vote by districts on whether to remain under the League of Nations or join France or join Germany. The League of Nations shall then decide upon the sovereignty, "taking into account the wishes of the inhabitants." In case the League decides to return the territory to Germany the mines must be bought by Germany at a price to be fixed by arbitration, and if Germany fails to pay that price within six months the territory goes to France finally. But even if the Sarre goes to Germany the French will retain the right to purchase at a price fixed by the League all the coal required for "their industrial and domestic needs."

## Kolchak and the Bolsheviki

ADMIRAL KOLCHAK, supreme ruler at Omsk, who a month ago was said to be advancing rapidly upon Moscow and likely soon to overthrow the Soviet republic, has received a severe setback. It appears now that he did not get within 600 miles of Moscow and did not take Samara, Saratov or Kasan on the Volga, as reported, but only got to Sarapul on the Kama, and this he has now lost. The Bolshevik troops have driven the Kolchak forces back 200 miles and taken Ufa, which they lost last year. The Soviet claims the capture of over 50,000 prisoners with large quantities of munitions. Each side accuses the other of devastating the country occupied and inflicting atrocities on the inhabitants. Each side asserts that its advances are welcomed by the people and that it receives wholesale desertions from its opponents.

The Kolchak troops, which are officially stated to number 300,000, have been supplied with arms and equipment by the British Government and instructed by British officers, but no British forces have taken part in the fighting west of the Urals. The United States Government has called for 8000 additional volunteers for service in Siberia. The Russian Embassy at Washington has officially thanked the American and Allied Governments for the aid they have given to the Kolchak Government in its fight against the Bolsheviki.

It is reported that three of the Big Four, England, France and Japan, are in favor of the recognition of the Omsk Government as the legitimate authority over all Russia. Admiral Kolchak has given assurances that he will call a constituent assembly to decide upon the

## Premier and Prince

Evidently one way to tell whether a man achieved greatness or had it thrust upon him is by his grasp on things—cigars, for instance. Mr. Lloyd George's clenched fist is as unconscious an expression of his personal force as his forward-thrust foot and square jaw. The Prince of Wales leaves it to the cigar to stay with him or not as it likes.

form of the future government as soon as he takes Moscow. But President Wilson has been reluctant to give the Kolchak Government official and exclusive endorsement because from the reports of Americans on the ground it appeared that Kolchak's support was in large part reactionary and that he does not command the entire confidence of the people, even in the territory over which he has control. The Russians abroad are not agreed on the question. Most of them, like Prince Lvov and Nicolai Tschakovsky, the Socialist head of the Archangel Government, favor Kolchak, but Kerensky opposes him. The representatives or agents of the Russian cooperative societies in America are divided as to their policy. Those from Siberia have come out in support of Kolchak, but those from European Russia declare that this is contrary to the principles of the cooperatives, who have always abstained from po-

litical controversies. The Constitutional Democrats, the party of Professor Miliukov, favor Kolchak, and so do most of the Social Revolutionists. But some of the Social Revolutionists, formerly bitter opponents of the Bolsheviks, have gone over to the other side on account of their resentment at foreign invasions and even taken office in the Soviet Government.

Admiral Kolchak has been hampered in the establishment of a stable government by the ambition and corruption of his associates. Rival generals, Senenov, Horvath and Ivanov, have disputed his power and his ministers have been guilty of graft. Zerirov, Minister of Supplies in the Kolchak cabinet, has been impeached for frauds estimated at 60,000,000 rubles (nominally \$30,000,000). Because of these scandals the Omsk cabinet resigned in April, but Kolchak seems to have weathered the storm and organized a new ministry on a broader and, it is to be hoped, an honest basis.

The American troops in eastern Siberia are having increasing difficulty in guarding the railroads. There have been risings in various parts of the country by Russian partisans who are opposed to the rule of Admiral Kolchak at Omsk but who deny being Bolsheviks. The American troops are under instructions not to take part in such civil conflicts, but when in February a battalion of the Oita regiment lost 200 men in a battle with these partisans, the Americans were sharply criticized in Japan and England for refusing to go to the rescue of the Japanese. The question was brought up in the British Parliament and Mr. Churchill explained that it was merely an error in judgment on the part of General Graves, who thought the belligerents were not Bolsheviks when they really were. But the Americans have been so incensed at the cruel treatment of the people by the Cossacks of Kolchak and other leaders that they are disposed to sympathize with the revolt. Probably on that account Kolchak has requested the American forces not to come within a thousand miles of the front. The Japanese papers claim that many American soldiers have joined the Bolsheviks.

The Americans do not desire to move westward, for they have their hands full where they are, especially since the Canadian troops have all been withdrawn. One of their hard jobs is the protection of the coal mines of the Suchan district, northeast of Vladivostok. A general strike was called here on May 22 and 2000 miners and railroad men went out. Men were found in the American ranks capable of running the engines, and with the aid of the Chinese and Japanese forces the mines and stations have been protected. But the Russian bands—be they Bolsheviks or not—have been busy at the lines and there were a dozen wrecks within two days, in one of which more than a hundred Japanese soldiers were killed or injured. Three Americans were slightly wounded in pursuing some of the depredators through the hills, the first casualties among our Siberian forces. These bands who are fighting the "Kolchaki" are said to number 10,000. There are now 7000 combatant and 200 non-combatant American troops in Siberia. The Japanese number 23,000, of whom 15,000 are combatants.

The Americans have determined to confine their activities to a zone of ten versts ( $6\frac{2}{3}$  miles) on each side of the railroad track, and the Czechs have adopted the same rule. The Japanese and British complain that this is not enough to insure safety and point to the recent raids as proof. A band of Bolsheviks on skis attacked a train west of Irkutsk and captured four carloads of Czech munitions.

The British have apparently had to withdraw from Merv and the Trans-Caspian region, but they control the Caspian and have expelled the Bolsheviks from Alex-

Photo. 1918 from G. H. Schmidgall.

Every peg will find its hole to fit, whether it be square, round, or irregular, now that we have the auger invented by Carl H. Schmidgall, of Peoria, Illinois. It is a comparatively simple tool, and it works by rotary motion through wood, iron or stone. It is really five augers in one—four little conical rotary cutters milling out the corners of the square after the main shaft has made a round hole. Drilling a square hole through a one-inch piece of marble by present methods takes four hours or more of careful work by a skilled man. The new invention does it in five minutes. A simple variation in the shape of the cutters makes possible the boring of holes of almost any shape. Above is the inventor showing off the good points (speaking literally) of his auger. Mr. Schmidgall has been working on the invention since he was twelve years old, while learning his trade in his father's blacksmith shop. He is now twenty-nine, and operates the biggest hand-made tool shop in Illinois, outside Chicago.

androvsk, their only port on the east side of the sea. If Kolchak forces can retain Uralsk and Orenburg the Bolsheviki will gain no advantage from their acquisition of Turkestan, for it is only thru these railroad centers that connection may be kept up with Moscow.

The defeat of the Kolchak army on the eastern front has enabled the Soviet Government to transfer troops from the Urals to the western front, which is being attacked from the Baltic to the Black Sea by Finns, Estonians, Letts, Lithuanians, Poles, Ukrainians and Rumanians, supported by British and French naval forces. Four times recently it has been reported that Petrograd had been taken by the Estonians or Finns, but according to latest accounts, the fighting is still fifty miles off.

## Fares to Europe by the Pound

WITH the NC-4 safely across to London and Lieutenant-Commander Albert C. Read the Columbus of the uncharted air oceans, we may all of us who are this side of really old age expect some day to fly over to London or Paris for the week-end. As to just what sort of an airliner we shall step aboard when the time comes the experts differ, but we can predict with considerable certainty some interesting things about the voyage.

First of all, when you go to buy your ticket on the night mail for London the polite young man in the office of the Trans-Atlantic Air Line will ask you to step on the scales. He will weigh you very exactly, make a memorandum of the pounds you carry, and, glancing at a schedule, tell you the price of your ticket. And right there the thin man will come into his own; for the price of passage will be according to weight.

On a sea ship space is the valuable thing, and fat men and thin men need about the same amount of living space. Weight—a few thousand pounds more or less—is of little moment to the craft that swims, but it is the all important thing to the ship that flies; there pounds will be precious even when giant "Mauretania's" of the skies appear, airplanes whose passenger list will take real space in the ship news columns of the newspapers.

The record of pounds per passenger kept by the ticket office will go along as it grows to the port captain of the line and presently he will notify the office that no more passengers can be accepted for the "Skyrocket," sailing Tuesday. Should two very slim people appear at the last moment they might get passage by buying out the ticket of a passenger of ex-President Taft's general avoirdupois.

The engineers of the line will have it all figured out. They will know the weight that the airplane can lift. From this they will subtract the weight of fuel and oil necessary for the flight and the reserve for emergencies such as being forced to alight on the water to make repairs, the weight of the airplane's crew, and of such eatables and drinkables as are necessary on the forty-eight hour trip. The remainder will represent the weight of the passengers and mail that can be carried. So naturally it is going to cost the fat man more to fly than it will the slim one.

The passengers on board the giant seaplane (the trans-ocean air craft of the heavier-than-air type will have to be a seaplane, since no land plane of such size could make the run on wheels necessary to vault into the air) will have no promenade deck to pace and no bridge to ascend by special favor, and the voyage will be too short for smoking room scandal or interesting flirtations. But they will not lack comforts. Shut in, as they must be, in a sound-proof compartment to save their ears from the ceaseless thunder of the engines, they will have nicely ventilated and

© NEW YORK TRIBUNE

This is what the big passenger planes of the near future will look like, with ample seating capacity, powerful motors and wide wing spread. A portion of the plane is cut away in this drawing to show the seating accommodations. It is probable that the biggest passenger-carrying planes will be seaplanes because of the impracticability of making wheels support the heavy load for a take-off from land

warmed quarters, and they will be able when making the passage in clear weather to look down thru port-holes on a wonderful ocean panorama. The few meals necessary on so short a voyage will not be notable for elaborate courses, but there should be plenty of electrically cooked food, served hot.

Our voyagers will doubtless proceed by way of the Azores, since to take the course that Hawker tried would mean bucking head winds, and that would mean carrying more fuel, which in turn would mean more weight. Pounds will mean dollars in or out of the pockets of the promoters of the pioneer Trans-Atlantic Air Line.

## Foreign Exchange Problems

IN normal times French francs and Italian lire sell on a parity, 5.18 of either for a dollar. This year they sold as low as 6.76 and 8.68 respectively, so that in order to buy a dollar's worth of American goods the French merchant had to pay over 30 per cent more in francs, while the Italian merchant had to pay nearly 70 per cent more in lire than in normal times. This is without considering that war-inflated prices had to be paid for goods. The reason for this condition is that both countries have been buying a vast amount of goods from the United States, while they have been selling us very little.

These countries are our debtors. In ordinary times when the balance of trade is against a country, it will ship gold or securities to the creditor country in order to liquidate the adverse balance. Now, France and Italy cannot, because they need all the gold they can secure in order to protect the vast amount of paper currency which has been issued and because they have no securities which are easily marketable here. The present con-

Niagara Falls

The hard-headed business man looks upon this majestic phenomenon of Niagara as a shameful waste of an invaluable national asset; he sees only unused power. The esthetic enthusiast looks upon it as a priceless national asset which must be preserved; he sees only natural beauty and grandeur. Unfortunately you cannot use the power and keep the beauty, too. Will the coming generation put material or esthetic conditions first?

dition results in a demand for dollars in France and Italy but very little demand here for francs or lire. Unfavorable political events also affect the course of exchange rates. Italian exchange has been affected by the events at the Peace Conference and the assumption that with Italian territorial aspirations unrecognized a revolution might break out in Italy and its credit be destroyed.

Heavy sales of lire by speculators—that is to say, short sales—in the past few months caused a drop in lire rates of from about 7.00 to nearly 8.90. In the case of francs, only the trade situation affected quotations, as political sentiment here has been favorable to France. But as soon as the speculative element got wind of the Italian difficulties, they saw in the situation an opportunity to reap large profits and they *sold*, so that Italian exchange suffered as it did in the months following the breach at Caporetto, when lire reached a low point of over nine for a dollar.

Of the various suggestions that have been advanced for the creation of institutions to eliminate disorganization of this character, one which is most ambitious in structure was recently proposed in the form of a billion dollar foreign finance corporation. While at the outset no details were given as to the identity of the organizers, later press items stated that the idea was advanced by Senator Robert L. Owen, of Oklahoma, and had been discussed by cabinet officers and members of the Federal Reserve Board. The plan contemplates the enactment of legislation by Congress which will permit the Government to become interested in the enterprise.

Under the provisions of the measure a strong corporation would extend long time credits, for several years if necessary, to foreign governments or merchants, such credits to be secured by deposit of proper collateral. The corporation would sell its debenture bonds to the War Finance Corporation, to banks and to the general public, the security for the debentures being the collateral pledged. Through the credits the European countries now undergoing reconstruction would be given enough raw material to keep them busy. In a few years, by their own productive ability, they would be in a position to maintain their affairs in good order so that they could liquidate the credits granted them.

Under present conditions in the exchange market

there is no incentive for the French, Belgian or Italian merchant to purchase from us anything but the barest necessities. Senator Owen feels that if we are to retain our markets abroad we should not make it difficult for our friends to purchase our goods. We have the products and the markets, but if our customers have no cash we should extend them credit. We should not merely do this as a business proposition, but because Europe is in dire need after a tremendous struggle; anything we can do to put Europe on a normal business basis will naturally aid industrial conditions all over the world, and prevent overproduction and unemployment.

The ideal manner by which foreign countries can stabilize their exchange is to produce goods and export them to their creditor countries, such as the United States. Whether this can be done in a few months or a few years will depend upon how much raw material we can sell to Europe. Until European countries can begin exporting, Senator Owen's plan can serve as a useful instrument, altho financiers generally look upon such expedients with little favor. Secretary of the Treasury Glass is on record as opposing the flotation of foreign securities by the United States Government or its agencies, maintaining that this sort of financing should be undertaken by private interests. The inference is made that the present Administration will support the creation of private investment trusts to engage in the sale of such securities for the purpose of stabilizing foreign exchange rates. However, Senator Owen's ideas are regarded as sound, and altho they may be at variance with those of Government officials in charge of foreign exchange questions, they have the support of many exporters and importers.

## You Have Thirty Slaves

EVERY reader of The Independent has thirty slaves working for him, rain or shine, and 365 days in the year. So has every man, woman and child in the United States.

It might seem as tho we should all live in luxury with so much labor at command. Perhaps you don't believe the statement. It is made on the authority of the investigators of the United States National Museum. They take this startling way to make us understand—

accustomed as we are to shaving by light created by electric power, eating breakfast cooked by gas power and riding to our offices on steam or electric driven cars—the enormous forces that we have created to work for us.

It is roughly estimated that 150,000,000 horse power is used in the United States. If we were to wipe it all out and try to do the work by man power we would need three billion slaves on the job driven by a super-Legree—and then we couldn't do it.

The raw materials of power are at present coal, oil and water. Perhaps some day we may be able to hitch up the sun's energy direct—scientists have long been at work on the problem—but we cannot do it now, and such wind power as we have at work for us is too small, comparatively, to figure in these estimates.

Our power slaves demand much of their masters. To provide them with food we have to transport and distribute about 700,000,000 tons of coal each year, and the demand is increasing at the rate of 50,000,000 tons yearly. That is a terrific burden for the railroads, which themselves burn a great quantity of coal in transporting more coal to be consumed elsewhere. So if we are to go on having the equivalent of thirty slaves—uncomplaining, tireless workers—for each resident of the country, we must find new ways of feeding them.

King Coal long ago drove hydraulic power from the field. The development of electric power has reestablished it. But the comparatively recent development of hydro-electric power has hardly checked coal consumption and it is at the moment a question whether coal will not again beat hydraulic power in the renewed battle for supremacy fostered by electricity.

Perhaps it will for a time, but sooner or later the contest must turn in favor of water power. The end of the world's known coal resources is in sight. Our children's children will face the menace of worked out mines. What about the unharnessed water power then?

It has been estimated that the possibilities of hydro-

electric development in this country total 200,000,000 horse power, of which 50,000,000 are available without building great reservoirs or other costly storage works. Converted into electric energy this vast force could drive the wheels of all the factories and railroads in the country and light all the buildings.

In spite of these facts only 10 per cent of the increase in power in recent years has been in water power, and while the present production of hydro-electricity is estimated to be equivalent to 40,000,000 tons of coal annually, ten times that amount of coal goes into the production of steam power and carbo-electric power. The answer to the question "Why?" is more largely a study in economics and politics than in the science of power development.

But we are waking up to the need for a solution of the problem of feeding our power slaves, and we have at this moment before us the example of Canada, which plans to tap the still tremendous resources of Niagara—the greatest single source of "white coal" on the continent. This project includes building a canal which will take the water from above the falls and carry it thru a power canal to a distance below Niagara, which will give the water a drop of 300 feet, or twice that which it gets at the great leap itself. This head of water will develop 300,000 horse power per second and will, when turned into hydro-electric power, supply most of the towns in the great province of Ontario. Canada has no vast coal fields and therefore may be first to point the way in finding in the rivers food for the power slaves.

The carrying out of the Canadian plan, as well as any American plan for the use of further power from Niagara, would involve a revision of the treaty between the two countries for the conservation of the Falls, as well as a modification of the policy of preservation to which both the United States and Canada have given their approval. But when the coal is gone, the power must be found somewhere. For power is life.

## Editorially Speaking

Lamont to Davison to Root—the double play that put both Lodge and the President out.

\*\*\*

It is a hard thing to teach the minor nationalities that self-determination does not mean selfish determination.

\*\*\*

The revolutionists of India are modern in their methods. They are using the "chain" or "snowball" scheme of postcard propaganda such as has often been used in America to get aid for some more or less worthy sufferer. But this form of agitation has the disadvantage of contributing to the Government revenues thru the increased stamp sales.

\*\*\*

The peace treaty cat is out of the bag. It does not differ by so much as an inch of whisker from the description we had of it before. Nevertheless it is a serious question whether the practice of shutting cats up in bags is wise. The most comfortably irenic and purr-some cat can kick up an awful fuss when you try to confine it with a drawstring.

\*\*\*

The publication of the memoirs of Lord French reveals the fact that he was selected by Mr. Haldane as early as 1902 to command the British army to be sent

to the defense of France and Belgium and that he devoted the next six years to a study of the campaign on the ground. The British staff were well aware of the intention of the Germans to invade France thru Belgium, but made a mistake in concentrating the British forces at Maubeuge, so the Germans, passing further west than was anticipated, inflicted a disastrous defeat upon them.

\*\*\*

One of the advantages of American participation in the war is the greater knowledge of American institutions by our European associates. For instance, a Columbia professor over there in talking to an unusually well informed Englishman about education said: "I wonder which American university is best known in England." The Englishman replied: "Oh, we know both of them, Yale and Harvard!"

\*\*\*

In the legislatures of three states—only six days after Congress passed the suffrage amendment—precisely six legislators voted against ratification. There was unanimous approval in three of the six chambers which voted. In these three suffrage states ratification was a foregone conclusion. But the shrinking of opposition to the vanishing point will be a shock to the "antis"—unless they are too numb from repeated shocks to feel another.

# Burning Down the House to Roast the Pig

An Editorial

By Hamilton Holt

**O**N June 15, 1910, Philander C. Knox, then Secretary of State, delivered the commencement address at the University of Pennsylvania, part of the peroration of which was as follows:

We have reached a point when it is evident that the future holds in store a time when wars shall cease; when the nations of the world shall realize a federation as real and vital as that now subsisting between the component parts of a single state; when by deliberate international conjunction the strong shall universally help the weak, and when the corporate righteousness of the world shall compel unrighteousness to disappear and shall destroy the habitations of cruelty still lingering in the dark places of the earth.

When these pregnant words were uttered Secretary Knox was engaged in the laudable effort of negotiating all-inclusive arbitration treaties with England and France, which, it may be incidentally recald, the Democratic Senators were then attacking as furiously as the Republican Senators are today attacking the Covenant.

But times have changd. Last week Senator Knox introduced a resolution into the Senate which, if adopted, may undo all our delegates have concretely done at Paris for the very federative principle which the distinguished constitutional statesman so eloquently favord nearly a decade ago. The purpose of the Knox resolution is nothing less than frankly to separate the Covenant from the Peace Treaty. The League of Nations is to be left "for later determination" on the astonishing pretext that "the people of the United States have had neither time to examine and consider nor opportunity to express regarding it a maturd and deliberate judgment."

It was no mere chance that the Peace Conference past at its second Plenary Session of January 25 a resolution of which the following is the first paragraph:

It is essential to the maintenance of the world settlement which the associated nations are now met to establish that a League of Nations be created to promote international obligations and to provide safeguards against war. This league should be created as an integral part of the general treaty of peace and should be open to every civilizd nation that can be relied upon to promote its objects.

The question of whether a League of Nations should be an "integral part" of the treaty was the burning issue from the day the Conference assembld. Every conceivable effort was made by all the forces of chauvinism, militarism, commercialism and old-time diplomacy to have the consideration of the League of Nations deferd until after peace was declard. The League of Nations was one of President Wilson's cardinal fourteen points and that was apparently the only way it could be side-trackt. But largely thru Mr. Wilson's insistence better counsels prevaild and the League became the very frontispiece of the Peace Treaty.

And now a careful perusal of the full text of the treaty as publisht by the Senate discloses the fact that the League of Nations is so interwoven in the texture of the whole general peace that to extract it from the treaty would be like the attempt of the dentist who, when he tried to pull the tooth, brought out the whole skeleton with it. I have gone over the treaty with special reference to the Covenant, and not counting Part I,

which is a republication of the Covenant itself, the League of Nations is referd to by name seventy-one separate times.

The League, for instance, will have full charge and final disposition of the Sarre valley; it will control the free city of Danzig; it will supervize the conventions between Germany and Poland and Germany and Austria; it will have unlimited power to investigate conditions in Germany; it will supervize all treaties between Germany and the Allied Powers, it will have duties to perform in regulating the international traffic of ports, waterways and railroads; it will have power to settle all disputes arising out of the peace treaty and to amend it; and it is inextricably bound up with the labor conventions, in which it has all sorts of administrative, executive, legislative and even judicial functions.

These and similar duties are given to the League of Nations under the peace treaty. The League is in fact the organization that is intended not only to keep the peace of the world, but, as is stated at the head of the preamble of the Covenant, "to promote international coöperation."

Moreover, the League is the only power adequate to safeguard the integrity and independence of the new nations born during the war. How long could Poland, Finland, Yugoslavia, Czechoslovakia, Hungary, Hedjaz and Palestine exist as independent nations in an era of oldtime militaristic alliances? What chance would Estonia, Latvia, Lithuania, Ukrainia, Georgia and Armenia have to work out their destiny unmolested except under the egis of a League of Nations? And what about our enemies, Germany, Austria, Turkey and Bulgaria? Shall we simply sign with them a scrap of paper and then depart from Paris under the delusion that the treaty will execute itself? We showd in The Independent of May 31 that the sentence imposd upon Germany by the Allies was an indeterminate one, to borrow a term from the criminologists. Can there be the slightest ground for hope that such a sentence can be carried out except by a powerful League of Nations always on the job as probation officer, to see that Germany keeps disarmd and pays her fines and continues to keep on her good behavior? And then how about disarmament? Is there the slightest chance that one single nation will disarm unless all do the same, and is there any chance that all will disarm if some can re-arm again at their pleasure? Is not the League of Nations the only organization strong enough to maintain that general disarmament so passionately desired by the war-weary peoples of the world?

What about the captured colonies? If we sign a peace without a League these colonies will be put in the grab bag for annexation by the rival powers instead of being administered with regard to native interests by the admirable mandatory system of the League. And what about those nations who have no access to raw materials? Are they to be left out in the cold? They are likely to be so unless a League of Nations is there ready to provide for their necessities on some equitable basis.

Indeed, if no attempt is made to establish a League

of Nations in the present peace treaty the world will run the risk of sinking back to the old system of alliances, with its mutual hates and suspicions, scandalous armament rivalries, cutthroat economic competition, class exploitation and inevitable wars.

Just two more considerations: First, the Knox resolution says that the acceptance of the plan to sever the Covenant from the treaty "will facilitate the early acceptance of the treaty by the Senate of the United States." And yet, in another part of the resolution, we are told that "the treaty as drawn contains principles, guarantees and undertakings obliterative of legitimate race and national aspirations, oppressive of weak nations and peoples and destructive of human progress and liberty." I ask Senator Knox and all other Senators

who support this view whether they propose to "facilitate the early acceptance of the treaty," even if the Covenant is taken out of it, when they solemnly declare the treaty embodies such monstrous provisions? Second, the Knox resolution provides that when the peace of Europe is "threatend," the United States will again, if necessary, join in the "defense of civilization." It is proposed then that the United States shall wait till the issue again arises and then pour out her blood and treasure, but we will enter no league to prevent the issue arising. The war has evidently taught certain Senators nothing. A thousand times better the old international competition than the new international cooperation!

And what have the America people to say about this?

# What Is Fair?

An Editorial

By Franklin H. Giddings

**T**HE demands made by the telegraphers are representative of the program which a majority of wage earners in Europe and in America stands for today. It is not a socialistic program, certainly not a Bolshevik program, but it is a program of industrial democracy.

Industrial democracy proposes that wage earners shall share in the control of industry. Old fashioned employer-class capitalism has all along insisted that individual employers shall "run their own business" as they see fit. Bolshevism proclaims that industry is to be taken away from an employing class and given outright to the proletariat. That would be a syndicalist socialism. The more conservative state socialism asks that industry be taken from an employing class and made over to public ownership and control.

A majority of wage earners is not as yet calling for any of these radical changes. It is not demanding complete proletarian control of industry with an expropriation of capitalist employers and a relegation of employers themselves to the ranks of wage earners, but it does claim a share in control and a much larger share than it obtains now in the distributed product.

If one could accept the current speech of employers at its face value it would appear that nobody disputes the wage earners' contention or has any interest to refuse what they ask. "Industrial democracy is coming; everybody grants that"; so runs the talk. "The question in dispute is how to bring it about and to organize it." This means, when all is said and done, that the employers know that the present is not a good time to run the old line of capitalistic sociology in editorials or in the political platform, but that they have no intention of surrendering any control that they can retain.

The telegraphers' statement of demands puts the finger precisely upon the real cause and occasion of strife. It says that wage earners must have the right to join unions, and that collective bargaining must be between employers and unions organized by the men themselves, instead of between employers and associations of employees organized and controlled by the employers. Not to put too fine a point upon it, the telegraphers say, in substance: "We demand the real thing and not a continuing employer control camouflaged as industrial democracy." And this is the contention not only of the telegraphers. It is the contention of the entire body of organized wage workers in the United States. Recognition of the union and collective bargain-

ing thru the union—about that pivot the labor movement at present turns.

Over precisely this point the industrial fight has been waged in England for years past and it has apparently resulted in decisive victory for the unions. In a recent article in these columns, "The British Way with Labor Unrest," the report agreed upon by the conference of representatives of employers' associations and labor unions, recently authorized by the Government, was summarized. Recognition of each group of organizations, those of the employers and those of the wage earners, as independent and equally valid, is the basic principle of the proposed procedure. It is supplemented by another recognition of fundamental importance, namely, that of the obligation of the Government representing all interests of the nation, including domestic peace and social order, to enforce agreements and by proper legislation to maintain conditions conducive to general welfare.

This is not a radical program and nothing is gained by representing it as such. Socialism, whether state or syndicalist, is radical. By putting the capital-owning employer out of business and destroying his responsibility for results it would make an end of our whole existing social order, to experiment with one different in both principle and practice. The demand for control-sharing thru collective bargaining with unions does not do this any more than political democracy does it. Political democracy did not deprive its predecessor, the aristocratic element in society, of the political franchise. It extended the franchise to classes that had not enjoyed it. Control sharing between employers' organizations and wage earners' organizations would leave the framework of industrial society unchanged. It would not destroy individual initiative, nor eliminate individual responsibility. It would, however, lay upon government, as the British have seen, the obligation to enforce agreements, thereby maintaining responsibility.

The public is asking what is expedient and what is fair. Of one thing we may be sure. The American public will not look upon any of the radical propositions as expedient. It is, however, quite possible that before the industrial conflict becomes as bitter thruout the country as it has been in particular industries and places, the American mind may arrive at the conclusion that there is nothing either inexpedient or unfair in the demand of labor for a share of real control to be exercised thru organizations created by itself.

# The Shell-Shock Continent

## As It Looks to an American in Paris

**T**HE great drawback to a long war is not that it destroys, but that it exhausts the energies essential to the task of rebuilding.

Every one can understand the misery and poverty now prevailing over so much of the continent of Europe as a result of the war, but what is not so easy to comprehend at a glance is why many countries should be nearer famine after half a year's armistice than during the period of conflict itself. The mere stopping of fighting ought, one would think, to have brought an immediate betterment to the national life. Demobilization sets labor free for the productive work of farm and factory, at the same time it puts a stop to the purely destructive activities incident to war. Instead of making cannon, gas masks, Red Cross supplies, entrenching tools, armor plate, high explosives and tanks, the community can turn to the production of flour, butter, Ford motors, civilian clothing, structural steel, baby carriages, phonographs and souvenirs for the casual tourist. A nation at war is tight to the limit, is borrowing every spare cent which can be raised at home and usually running up the largest possible indebtedness abroad, and in general is pursuing a financial policy based on the same principles as those which would impel a man to burn his house to keep from freezing to death or drink his own blood in order not to die of thirst. Peace, even coupled with debts and indemnities, stops to some degree this necessary but ruinous financial waste. Yet industry does not recover.

The real reason for the material state of Europe is its mental state. During the war waste was going on far more rapidly than at present and, during the last few months of fighting at least, the exhaustion of wealth caused by the war pressed as keenly upon the needs of the people as at present. But so long as the war tension could be kept up every one was eagerly at work to create new wealth for the purposes of the nation. Loans were larger than now, but more easily raised. Taxes were heavier, but more easily endured. Restrictions were more numerous, but caused less grumbling. The current wealth of Europe was destroyed and again created several times over during four years of zealous, unremitting toil on the part of the men, women and even the children of Europe. It will forever stand as one of the miracles of history that soldiers and civilians could stand such overstrain for so long a time. But there came an hour when nature could no longer endure the demands imposed by the relentless deity of the state.

Russian morale broke first. Misrule and that incapacity for collective voluntary action which is common to many peoples of eastern Europe and of Asia had combined to weaken the spirit of patriotism, so that the Russian soldier had little moral reserve to fall back on but his personal courage and his loyalty to an individual leader, and in this position he had to face as best he might the cruelest hardships and the most appalling losses which fell to the lot of any army. Thus it came about that millions of Russians viewed with apathy the dissolution of a mighty empire, whose leaders had dreamed not unreasonably of world dominion, into a chaos of wandering tribes and petty independent villages, and permitted a small group of determined doctrinaires to seize supreme power from the nerveless grasp of Russia's own elected representatives and establish a class dictatorship.

This has been a war of attrition. Attrition has a double meaning; it implies not only the killing of enemy units, but also the wearing down of the spirit of common purpose which unites them. If you take two stones

and rub them together continuously they will eventually be ground down into fine sand. Not an atom of the stone has been destroyed, but you have destroyed that cohesion, that physical *esprit de corps*, which made the stone an "it" instead of a mere "they." Also, the softer, less cohesive stone will break to pieces first.

This is what happened in Europe. In Austria-Hungary, for example, there was at the opening of the war a real spirit of loyalty to the Emperor and the State. In the course of a year or two this had practically disappeared because of the highly artificial nature of the Dual Monarchy. Nobody thought any longer of the hyphenated Great Power on the Danube; what nerve the Austrian to fight was his feeling of national kinship with the other Germans, and the Hungarian thought only for his little ethnic enclave of the Magyars. The Czechs and South Slavs and Italians were

One of the many French refugees who face the task of rebuilding their homes from total ruins

openly rebellious. Had Germany won, these nations might yet have been kept together by force, but the possibility of a spiritual "Mitteleuropa" had vanished forever. Two years later the German Austrians and Magyars had forgotten even their linguistic loyalties and were pleading for any sort of peace. Nationality had conquered loyalty to the multi-national state and individualism had conquered both.

The wearing down of German morale was a much harder problem, as the Germans of 1914 were perhaps

the most cohesive and collective-minded people in Europe. Their fault was not the Slavic anarchy or the careless individualism of the western nations, but the contrary tendency to sacrifice everything else to the power and glory of the nation. It was for a long time a problem whether Germany or the western allies would first crumble under the inhuman strain of the four years' battle. Both sides carefully watcht for the first signs of reluctance to make further sacrifice for victory; mutiny, strikes, parliamentary bickerings, bread riots, decreasing loan subscriptions, agitation for an early peace, diplomatic "feelers" thru neutral powers, quarrels among allies. It is worth noting that a periodical index for the war years gives under such headings as "Peace proposals, discussion of," almost nothing for 1914, very little for 1915, not much for 1916, a great deal for 1917, and whole pages for 1918.

THE whole story of the victory may be told in a sentence: The Entente had enough moral reserve power to meet the shock of the 1918 campaign; Germany had not. The causes for this were various. Chief of them, perhaps, was the fact that behind England, France and Italy loomed the gigantic figure of America, unworn by war, able to put into the field fresh troops with all the first glow of a great decision still upon them. The United States was the only belligerent power which had not to some extent "gone stale." 1918 was to us what 1915 was to Britain, the second year of the war and the first year of a big army in the field. In 1921, had the war lasted that long, the United States might have been war-worn and war-weary in its turn.

Another cause was the growing distrust between the German people and their Government. In England, France, Italy and Belgium, as also in the United States, the people could make or remake their governments at will; they could therefore blame only themselves for blunders and disappointments. But in Germany, as formerly in Russia, the Government stood apart from the people and beyond their reach. As long as the war was popular nobody seemed to mind this. But once the Government began to pursue policies not at one with the public mood, the people turned their eyes toward it as toward an alien or even hostile rule. That is one drawback to autocracy; it is a stiff, brittle régime, hard to bend but for that very reason easily broken.

Another disadvantage that faced the Germans was the

bad conscience which lay at the heart of all their war-making. Victory, or even a short war with any termination, might have enabled the German people to forget and forgive the fact that the will of their masters had put the world into trenches. But at the end of four years of horrible suffering it was hard to rally the nation without a moral appeal such as France could still make and Germany could not. It is not necessary to assume that the Germans have "repented" or become more sensitive to the call of righteousness than in 1914. Rather the tides of passions which overlaid conscientious scruples in 1914 subsided in the course of time, as an ebbing tide reveals the rocks which were hidden in full flood.

So far, so good. We are all glad that the disintegration of German nationalism reached the point where the army broke up into a mob of individuals and the old military Government crumbled in revolution. But the moral exhaustion of Germany has partially paralyzed her capacity for productive effort and the replacement of wealth is going forward very slowly. This means increasing poverty and the Bolshevik specter. Western Europe suffers from the same lassitude, though fortunately in a much less serious degree. In eastern Europe economic life is still almost in eclipse. People are starving not because the fields cannot be tilled or because railroad rolling stock is in poor condition, but because exhausted populations lose their power of effective cooperative effort and become short-sighted, selfish and badly "rattled" human atoms.

The remedy for Europe is exactly what a good doctor would prescribe in a similar case of exhaustion and nerve shock in an individual. There must be "quiet" for the patient, a period of rest from wars, banditry and civil conflict, such as can be obtained only from a powerful League of Nations and stable democratic governments. There must be "diet" for the patient, a resumption of the normal course of trade, and some generosity on our part in selling food and other necessities to Europe and extending loans on rather lenient terms. There must, most of all, be a restoration of healthy moral tone. It is impossible, perhaps, to speak of "cheerfulness" in Europe, but a dash of American optimism, a hopeful forward outlook we may in some degree find it within our power to communicate. When the exhausted countries recover their lost morale they will handle the merely material difficulties of reconstruction with amazing ease.

## Remarkable Remarks

JANE COWL—No woman fails so utterly in spiritual insight as a man.

JANE ADDAMS—In America no one is more detested at the present day than the pacifist.

FRANK L. GILBRETH—The industrial strength of any nation is in proportion to its tool power.

ROY K. MOULTON—Chet Blinks, the sign painter, has a daughter who paints also, but not signs.

DR. J. B. WATSON—The mother who cuddles and kisses her child when he cries should be punishable by law.

PREMIER PADEREWSKI—I enjoy the distinction of having the confidence of all parties and the support of none.

CARDINAL GASPARRI, PAPAL SECRETARY OF STATE—Rather than a reunion of the Christian Churches the Holy See aims at the unity of the Church, which

in the opinion of Rome, can only occur by all returning to the Catholic Church.

CASS GILBERT—Our memorial cemeteries are often an expression of maudlin sentiment from entrance to exit.

PRESIDENT EBERT—Brest-Litovsk was a declaration of human rights in comparison with the Paris Peace Treaty.

VICE-PRESIDENT MARSHALL—Making the world safe for democracy does not mean the destruction of the aristocrat.

ED. HOWE—May I say without offense that while at work in public places girl clerks should forget their love affairs.

GEORGE BERNARD SHAW—When young people are as free to walk out of a classroom where they are bored by a dull teacher as grown-up people are to walk out of a theater where they are bored by a dull playwright, the schools

will be far more crowded than the theaters and the teachers far more popular than the actors.

PRESIDENT WILSON—I have always been among those who believe that the greatest freedom of speech was the greatest safety.

EDITOR OF THE EVENING POST—Radicals, we suppose, are so called because they are, as a rule, radically wrong about their facts.

SENATOR GORE—Doing the work of a mandatory in any Mediterranean area is a good deal like doing dental work on the back teeth of the British lion.

FATHER DUFFY—If the people go to church on Sunday morning and make the proper contribution to the collection, it is all right for them to go to the ball game in the afternoon.

# Bolshevism

## One Hundred and Fifty Million Time to Overthrow the Reign

By Count

wholly opposed to that which was advocated by the existing political organizations of Russia.

The Russian peasant is anything but a socialist, the form of life in which he has lived from time immemorial being in communities, or *Mirs*, from which have been evolved the principle and practice of cooperation. As cooperation and communism are not openly opposed to capitalism, no better bridge could be found to unite the warring factions of capital and labor.

All the members of each community or village belong to the *Mir*, which in many respects is cooperative and paternalistic, distributing the land, electing its own chiefs, tax collectors and judges, caring for its poor and feeding those who are incapacitated for work. The *Mir* also takes upon itself the financial responsibility of all its members, builds roads, and develops various forms of cooperative enterprises. Often, it has its own mutual bank, and finances the business ventures of its members. If a member becomes bankrupt, the *Mir* takes up a collection to cover the deficit. If a member's house or place of business burns down, the *Mir* assists those who are unable to restore their property. The *Mir* builds schools, contributes toward the salaries of teachers,

Bolshevism means drenching the world in blood

**T**HE fatal mistake made by the Bolsheviki has been their distorted mental conception of the Russian peasantry, whom such radicals as Lenin and Trotzky have vainly been attempting to see thru the smoked goggles of Karl Marx. Believing that the adoption of socialistic programs would not confer any benefits upon them and taking no interest in the struggle between labor and capital, which is largely confined to the cities, the peasants thru their representatives have repudiated the political schemes of the Russian radicals, preferring the communistic form of government to which they are accustomed and, in spite of Czarism and Bolshevism, have enjoyed for centuries.

When Karl Marx first attempted to label and describe the various classes of humanity, one ambiguous group resisted all of his well known powers of scientific analysis and classification. Having divided the race into the bourgeoisie and the proletariat, he was puzzled to know in which grand division to place the one hundred and fifty million peasants of Russia. Upon investigation, Marx discovered that most of the peasantry not only possess their own agricultural implements and cultivate their own land, but at the same time work the acreage of the wealthy landlords. Thousands of peasants labor part of the year on their own land and the remaining months of the year in the cities, thus rendering impossible all efforts properly to classify them, either as bourgeois or proletarian, so that the class war carried on by the Bolsheviki has made no appeal to the Russian peasantry.

On account of the fact that the average peasant lives a miserable life, continually on the edge of starvation, the Bolsheviki supposed that he would join the industrial workers in a war against capital. Instead, the peasantry organized their own party, with a program

Press Illustration

The Russian peasants lead a miserable life continually on the edge

# Fatal Error

## Peasants Are Biding Their Terror and Rebuild Russia

Tolstoy

encourages improvements in agriculture and establishes new rotations of crops, such as clover, flax and other plants. In fact, its possibilities for social, economic and political service are practically limitless. The Russian peasant realizes the significance of the famous fable of the broom, any straw of which may be broken separately but which easily resists attempts to break all the straws together. He understands that the force of the *Mir* consists in the coöperation of individuals.

Only those political programs will have the support of the peasantry which insure their highest welfare, and at the same time do not interfere with the communal form of government to which they have been accustomed. Neither are they willing to give up the tracts of land which they possess in order to try out the doubtful experiments of radicals.

ACCORDINGLY, the Bolsheviki are in vain calling upon the Russian peasantry to join them in their fight against the bourgeoisie. The only part the peasantry took in the Revolution was to seize the land deserted by its former owners. In the government of Russia the peasant now has no part. But he realizes that he is

On, but they realize that they are the country's greatest strength

De Amsterdammer

In the peasantry lies the future hope of Russia

the country's greatest strength and that he may feed or starve at will the parasites of the cities, so he has adopted a policy of watchful waiting. He fully realizes that he is expected to feed ten times more parasites than before the Revolution; that he is robbed of his crops and swindled by worthless money, and that the whole country is being devastated. If Bolshevism is dying out in Russia, it is because the peasantry are more than willing to let it die.

The lesson to be learned is that no party can long hold power in Russia which is not supported by the majority of its population—its 150,000,000 peasants, who cultivate one-sixth of the land area of the world. The only government which can prove stable is one which is truly democratic, admitting all classes and parties, expressed thru a Pan-Russian Constituent Assembly, in which peasants would predominate overwhelmingly.

The hope of Russia lies in the provisional government of Admiral Kolchak in Siberia. This is supported by the governments of Denikin, in southern Russia, and of Tschaikevsky in the north. But what is most important, it is supported by the peasantry. Siberia is the first section of Russia which is being restored from the desolation of war to life. Thousands of societies, with millions of peasant members, have started to rebuild the country. The spirit of the Russian commune has been awakened, giving me absolute confidence of ultimate success.

Whether or not the Allies recognize these constructive governments makes little difference. In a short time the Bolsheviki, discomfited and starved by the *laissez faire* attitude of the peasantry, will be overthrown. Then the peasantry will do the same thing which they have done so many times—rebuild Russia anew and lead her again in paths of prosperity and peace.

# When You Drop in on Mr. Wilson

By Donald Wilhelm

**C**ONFLICTING impressions settle in on any one who pauses in the office of the President. But the deepest impression comes in the vast contrast between the utter simplicity of this office and its tremendous influence—the contrast between the static shape and size of it and its far-reaching strength and world-wide power. That contrast may indeed be called the White House paradox.

There are a thousand American offices that are furnished much more sumptuously than this office. There are thousands of offices that receive more mail; thousands that confront more daily decisions; and in Washington alone a thousand rooms with furniture more costly than that assembled in this simple and dignified room—a room round in shape, as if designed to give even approach in every direction, with high French windows looking out toward the Washington Monument

looming above the trees and the White House "backyard," where, these days, sheep gambol with their lambs and sometimes with the White House guards.

The vast reach of this simple Home Office of Democracy the President, of course, is aware of—yet he chooses for his own studious workroom an office simpler still. Without question, too, Mr. Tumulty, the secretary to the President, is aware that the pulse of this Home Office beats round the world. Therefore, one might expect here the manner of important personages, with special livery for the attendants, and for the others some awesome and striking singularity of mien or aloofness such as became the ancient tragedians, for instance, who must never be seen eating or lying down or bartering or building fires or staring at beauty like the rest of us, lest they seem humanly unheroic.

**S**O there is more of the White House paradox in this—that the President and his secretary and their aides act quite like other men! What, indeed, is the difference, their manner seems to suggest, if perchance this fidget or that reformer, this "acidulated professor," to use Mr. Otto Kahn's phrase, or that politician, be made infamous or immortal by dint of a letter or a smile from the President? Then, too, coming from Keokuk, Iowa, or from Jersey City perhaps, tho you expect problems to be handled here in some way or other quite different from the manner in which they are handled in "regular" American life, you find that these problems are treated merely as problems—not at all in any mystic manner suggesting demonstration or

*C. International Film*

Mr. Tumulty personifies the White House paradox of tremendous influence and self-effacing simplicity. His task of keeping the contacts strong and clear between the President and people of the United States requires infinite tact and executive ability coupled with a genius for keeping in the background. In this photograph Mr. Tumulty is doing the honors of the White House for Sergeant Alvin C. York, the Tennessee mountaineer hero who in one day killed 22 Germans, captured 132 and destroyed 33 machine-gun nests, thereby winning the Croix de Guerre and the Congressional Medal of Honor, America's highest decoration

display. These men make decisions that doubtless affect vitally ten thousand times more persons than do the decisions of any corporation. But they are handled as decisions—there is no patent panacea for their easy issuance here.

And farther still, to the White House itself and in a hundred other directions, the paradox holds—the contrast between simplicity, on one hand, power on the other hand.

**I**N the Home Office itself the windows strike you first.

Then the desk, with its swivel chair, back toward that bay of windows. It is a flat-topped mahogany desk, scarred, polished, stripped for work. It has no telephone, the 'phones are just outside the room. It has a brace of electric lights with white globes, the glow from which settles down on a trio of push-buttons, one of which is marked "Secretary." There are additional mahogany chairs, with

thin, fine aristocratic lines and dark green leather; a fireplace and mantel and clock yonder, farthest from the windows. And to right of the desk is a book-case built to the curve of the wall, laden with legal volumes—for use on Cabinet days, no doubt, or whenever impulse bends away from legal principles. And to left of the desk are three doors, with a green-leather mahogany davenport between two of them. The first of these doors leads thru a short corridor to a group of rooms fronting the streets. The first of these rooms is that of the President's secretary.

It is not so simple or so dignified as the inner office. Its red rug and green tapestries suggest, somehow, hard and continuous usage. There is, in fact, an endless line of callers nearly always trooping in or out—now a newspaperman from the press room yonder; now a chauffeur, or some official or other, gnawing at the butt of a cigar; then a mother, to inquire about her soldier son; then two suffragists and an ex-senator—all waiting on chairs or on the large leather davenport in the corner, to see Mr. Tumulty.

He wants callers to feel free to seek him out. Before he came to Washington he was secretary to "Governor" Wilson, and, by the way, addresses him as "Governor" to this day. He knew very well that President Wilson would not see so many callers as most other Presidents have done. He knew he himself would have to fill the gap. Then, too, he knew that among the multifarious duties of a secretary to the President he must be "hail fellow well met"; and being a man of astute political judgment, he knew, also, as the [Continued on page 447]

# The Worker's Foes Within

Another Article on "Wake Up Americans"

By Edward Earle Purinton

**T**HE spread of Bolshevism would mean the destruction of both the liberty of the nation and the prosperity of the individual. Every good American, for both patriotic and selfish reasons, should therefore stop fighting Capital or the Government, and commence fighting the perils of Bolshevism, whether in his employer, his fellow workman or himself.

The deadly foes of the American workman are not the individuals who compose the employer class, but the Bolshevik elements in the man himself that he permits to lead him or develop in him anarchy, disease, greed, immorality, mobolatry, prejudice, laziness, indifference, ignorance, irreligion.

The worker who stands for both liberty and prosperity fights these enemy forces till he conquers them and sends them on their way.

## I. THE SHREWD WORKER FIGHTS ANARCHY

**H**E knows what anarchy did for the people of Russia. It burned their homes and places of business. It caused millions to live in darkness because of lack of fuel. It spread frightful epidemics thru the land. It produced famine to such an extent that thousands of people died every day in the great centers of population like Odessa, Moscow and Petrograd. It so destroyed the value of paper money that even those who had money could not buy food. It forced people to eat the flesh of horses, dogs and cats. It made milk cost \$5 a pint, pork \$30 a pound, butter \$45 a pound, tea \$125 a pound. And Lenin, while forcing Russia into these horrible conditions, had the nerve to say that the American Government was entirely corrupt and he and his gang of reds were coming over here to take possession of our country and reform it! David R. Francis, American Ambassador to Russia, and others who have been there and seen how anarchy has destroyed the country, beg us all to unite in unceasing opposition to the spread of Bolshevism in the United States.

How is Bolshevism spreading here? Chiefly thru labor strikes, radical meetings, pessimistic and violent views freely expressed, underground agitation to stir up a class war. Note the statement of Secretary Wilson on this point: "The strikes at Seattle, Paterson and elsewhere were not economic disturbances. A de-

liberate attempt was made to incite a political revolution and establish a *Soviet* form of government. It failed because the Department of Labor has been fighting that spirit for two years. The soil was not fertile for *Soviet* seed."

How about the soil of your mind—are you keeping it clear of the seeds of anarchy? Remember that the seeds are very small personal things—restlessness, carelessness, thoughtlessness, rebelliousness, rashness, hard feelings and selfish acts. When you listen to a stump speaker talking wildly and give him the approval of your silence, or personally attack the Government or the leaders of industry, you are encouraging the deadly spirit of Bolshevism as plainly as the Trotzky were patting you on the back and shoving bribe money into your pocket.

The Government is trying its best to be fair to employees. Note the public statement of Frank P. Walsh, of the National War Labor Board. "In practically every case that was brought to us, the employers told us that the granting of the living wage would ruin the industry. The only reply we had was that, in that case, the industry would have to go. If an industry honestly conducted cannot be made to pay a living wage, then it must be parasitic and an unnecessary burden upon the people."

A strike always harms the employee more than the employer. The capitalist can afford to have his dollars idle better than the laborer can afford to have his days idle. You cannot tie up capital without tying up labor worse. In the State of New York there were 328 strikes that involved a quarter of a million persons in the months from October to June of 1916—those months marking the beginning of the period of industrial unrest, so-called, in America. The people engaged in these strikes lost 9,581,163 working days. Multiply that by the average daily wage, and you get some idea of the *cost to employees* of the habit of going on strike, for either good or bad reasons. During a strike, employees lose more wages than employers lose profits. One of the most famous industrial experts, John Leitch, declares that "during the past ten years we have wasted probably 60 per cent of our manufacturing capacity because of the total effect of the ill-will that did not develop

Universal & International

Mayor Ole Hanson, of Seattle, who broke the general strike there, the first Bolshevik revolution of its kind in this country. After office hours Mayor Hanson spends his time working in the shipyards, and is here shown tightening bolts in a keel

into actual breaks or that succeeded unsatisfactory settlement of strikes." He points out that "this stupendous waste lengthens hours unduly, prevents a just measurement of wages, and makes production costs and consequently sale prices unreasonable." You cannot go on strike without hitting your own purse.

#### II. THE HEALTHY WORKER FIGHTS DISEASE

**T**HE average American worker in a trade, business or profession dies twenty years before he should. Figuring the average earning capacity of a normal man at \$2000 a year, which is a low estimate, the worker thus deprives his family of a total income of \$40,000 because of premature death. While he lives, he spends hundreds of dollars needlessly on medicines, prescriptions, treatments, consultations, that could have been avoided if he had known how to take care of his health. And every year he loses an average of about two weeks from his work—a loss that he has to pay unjustly, or that his employer has to pay more unjustly. The average man is about 25 per cent efficient. He could be 50 per cent efficient—could double his present earning power, if he learned to eat, dress, bathe, exercise, work, sleep, rest and think, to the best advantage.

There is no longer need or excuse for ignorance on health matters. You can learn at home, for little or nothing, how to lengthen and strengthen your life to a point of supreme vitality, productivity, happiness and usefulness. There are national organizations that specialize in teaching you the modern science of personal hygiene. Whoever is unhappy is unhealthy. A man cannot be violent and virile both at the same time. The strong man does not complain, he commands. You should be ashamed to be discontented, for discontent always proves disability.

#### III. THE HONEST WORKER FIGHTS GREED

**W**HEN a husky fellow stops you on the street and begs you for money he never earned, you feel pity and contempt for him. When a masked highwayman holds you up in a dark alley and takes money by force that belongs to you, it is time to call the police. When a workman asks or expects from his employer more money than he earns, he is a beggar. When he joins with other workmen to demand more than he earns, he is a highwayman.

The human hog is out of date. He is supposed to have died during the war. The Japanese Premier, K. Hara, put the new spirit of internationalism in these words: "The narrow, provincial spirit of seeking one's own benefit at the expense of others has been found out of date."

In Russia, where employees were able thru anarchy to knock out their employers and take away all the profit, the business shortly died and the employees starved. The right and inevitable reward of greed is famine.

How much did you give to help win the war? A year's pay—six months' pay—even one month's pay? About 1000 men of the millionaire and employer class volunteered to serve the Government during the war for a dollar a year. The salaries of these men had ranged from \$5000 to \$1,000,000 a year. They donated fully \$10,000,000 worth of time, knowledge and labor to help free the world—and a lot of their employees were striking at the same time for unreasonably high wages!

The Government has tried its best to give employees a square deal. One of the first things the Railroad Administration did was to raise the wages of employees—and lower the salaries of officials. The National War Labor Board recognized the right of employees to organize and to bargain collectively in virtually every case of dispute, warned employers not to oppose unionism, granted to women equal pay for equal work, and made other decisions of national benefit to employees. The Department of Labor established a new division to investigate and improve the attitude and policies of employers toward employees.

If your wage is below par, your work is likely to be. Two-thirds of the men workers in the United States earn less than \$15 a week—and women workers less than \$8 a week. Yet the positions that pay \$10,000 salaries go begging. The great majority of employees do not care to do their work well. The way to be sure of earning more money is to deserve it.

#### IV. THE CLEAN WORKER FIGHTS IMMORALITY

**T**HE black plague is the worst destroyer of human efficiency. More men go to pieces physically, mentally and financially because of sex irregularity than from any other source of disability or disease. It is conservation, and not dissipation of the functions and forces of creation, that proves and improves the strength of a man. One reason why the American soldiers were invincible was the fact of their decency, morality, nobility of purpose and temperance of life. It takes a clean man to do a clean job.

#### V. THE STRONG WORKER FIGHTS MOBILATRY

**Y**OU may never have seen this word. It means idolatry of the mob. A sheep follows a herd because it is a herd—he practises mobilatry. A lion stands alone because he knows he has the power—he practises individuality. A herd—whether of sheep or men—bleats, crowds together, jostles back and forth, can't move without a leader, and lives on stubble. [Continued on page 452]

# What Did The Job Cost?

Ask this question of A. C. Hahn, Secy. and Treas. of the Phoenix Chair Company, Sheboygan, Wis., and he can give you the exact cost figures on any job as soon as it is completed. And what's more he can give you the cost of each operation as well.

All he has to do is to consult their Rand Visible Cost Record System—glance down the panel and put his finger on the very job in question—raise the card, and the complete cost information desired is right before his eyes. It is always there—instantly available when wanted.

## Valuable Information at a Glance

"Not only do we use the Rand System in our Cost Department," writes Mr. Hahn, "in determining the exact labor cost of every operation entering into our product, and in our Shipping Department, where we keep a record of all orders shipped, orders received, stock on hand, etc., but also in our

Purchasing Department, where we keep a perpetual inventory of all our purchases.

"The one big feature of the Rand System is its accessibility and the utter impossibility of losing or misplacing a valuable record.

"We are very well pleased with the principle involved in the Rand System and consider it by far the biggest step made in the card record line."

## Records that Get Results

Wouldn't you like to have the cost of any job—the number or value of goods in stock—in fact any record you may be keeping instantly available at all times?

Rand Systems will accomplish as much for you as they have for the Phoenix Chair Company. Call up the nearest of our branch offices maintained in all large cities or write direct for further information to The Rand Company, 2202 Rand Bldg., No. Tonawanda, N. Y.

## When You Drop in on Mr. Wilson

(Continued from page 442)

lawyer son of an immigrant who opened a grocery and then a contracting business in Jersey City knows, the President could ill afford to let visitors go home with a picture of his inaccessibility and of superfluous attendants filling the court of his assistants. Consequently, almost the first morning that the new secretary entered the Home Office corridors, he went straight to a stranger sitting rather disconsolate in the outer hall. "What can I do for you?" he asked.

"I want to see the President's secretary."

"Go right in."

Then, to the hall attendant, "Why didn't you send him in?"

"He had no appointment, sir."

"That doesn't matter now. Send them all in."

Later, when the imminent threat of war made every precautionary measure desirable, the President and his secretary agreed to trim the callers' list a little. It was then that the last interviews granted the newspapermen by the President were cut off. Thus, in another way, since it made relatively little difference whether the President was in his inaccessible workroom or en route to Europe or in Paris, the newspapermen felt no abrupt rending shock when the President put to sea. Cabling, or using the wireless as he did, his secretary filled the gap successfully, just as, for months before, he had filled the gap between the pressroom and the President's study.

This study is extremely simple. It has a desk, and, on a handy stand, a typewriter—an old "invisible"—a bookcase and a telephone. That is substantially all, save the atmosphere of study and seclusion. There the President does most of his work. There, sometimes in shorthand—"good" shorthand, which some of the White House stenographers readily read—sometimes on the typewriter, he has written, accurately and precisely, most of his messages. And there he "writes notes to Tumulty."

Before the President went to Europe a messenger was kept traveling almost continuously between the President and the man who might be called "the listening post"—Mr. Tumulty. That is, instead of frequent conferences breaking up the even flow of office routine, taking unnecessary time and leaving no record, the President jots down a query, passes it thru to Tumulty, or Tumulty passes a dictated note thru to the President. These memos have been written by the hundred. Mr. Tumulty has, at his end of the line, three large volumes of them. They afford an excellent record. As surely as "writing maketh an exact man," they afford, too, the means to make Mr. Tumulty the "truthfullest" man in Washington, for he knows what a vast responsibility is on him, one vastly greater than that upon any listening post in No Man's Land, perhaps, and he makes a science of his queries and conclusions. Then, too, it may be seen at once, this plan

also made it relatively easy for the President to elongate the distance between his office and Mr. Tumulty's, some four thousand miles or so.

It has come to be recognized as axiomatic that the head of any large organization should be required to handle detail and callers as little as possible, so that he can have his time for bigger thinking. Such leisure and freedom, to illustrate, the assistants to Judge Gary and Mr. Schwab have managed to give them both. Then, too, there is another indication that the secretary, as the office force refer to him, is an efficient executive. That is, no letter is ever opened in the White House offices now that is not answered or at least acknowledged before the last of its forty workers quits his desk that night. Moreover, it is not "volume" alone that is the mark of successful achievement in such an office as the Home Office of Democracy. More essential, even, is tact and accuracy.

Tact, as a matter of fact, should be the middle name of any efficient secretary, and it should be the first, second and last name of the secretary to any President, for the simple reason that just as any word or act here affects almost the entire world, is multiplied in its force a million-fold, so is any blunder exaggerated out of all proportion to its intrinsic appearance. One may remember, thus, what a turmoil was raised—this, too, before the United States entered upon its new maturity—when the secretary to Mr. Taft let the letter get by in which it was stated that the President would not recognize the Progressive party. Mr. Tumulty took heed when he took office, and frequently, since, to the men around him, has uttered an axiom that Solomon forgot but every one should remember, "Never write a letter that will not stand publicity."

He has other axioms, some of which ring more or less familiar because this man, who is, in a sense, stage manager and critic of the President is a lover of the theater and its literature. He knows what may be called the science of public opinion, too. It is he, in fact, who reads the clips, every evening, culled from papers all over the world, by two of the White House experts, and having read, in the quiet of his home, it is he who passes on to the President what he thinks essential. Of course, too, he is the only man who has unhindered access to the President at any time. And of course there are many times when, to all intents and purposes, he is the President, in other words, the President's personal representative. And after all, even if he does gain in public esteem because of the resplendent light that comes with his juxtaposition to the Great Democrat, still, in the very process, he is part of the White House paradox, part, in himself, of the vast contrast between the utter simplicity of the White House offices, and their extensive, worldwide power.

## Should the Road be Above the Truck?

By John R. Eustis

ONE would presume that highways and motor transportation were close allies, and the former a large contributor to the success of the latter. But existing conditions have brought them into competition and it is getting to be a question of which is master, the road or the motor truck. More explicitly stated, it is a question whether motor trucks are to be limited in size, weight and speed, so as not to involve factors of wear and tear beyond the strength of existing types of highways, or whether the highways are to be built to carry the most economic units of highway transportation.

The present deplorable condition of the highways along many of the main trunk routes in the Eastern States has brought this matter to an acute stage. The worn and torn up condition of these roads is the result of the combination, while we were at war, of heavy and steadily increasing motor truck travel and inadequate maintenance of roads because of the lack of labor and the high cost of road materials. However, users of the highways, especially those who drive and ride in passenger automobiles, seem inclined to lay the blame entirely on the motor truck. This resentment is intensified by the tendency of the average driver of a motor truck to disregard the rights of other users of the highways, especially in the matter of turning out promptly to permit a passenger car approaching from behind to pass. The legislatures of New York and other states at their recent sessions attempted to relieve this situation by passing laws requiring motor trucks using the highways to be equipped with mirrors, so located as to show the drivers the traffic approaching from the rear. The contention made was that the large bodies fitted to motor trucks used for suburban delivery work and inter-city haulage prevented their drivers seeing behind their vehicles, while the noise of truck motors drowned out the sound of even the horns of approaching passenger cars.

Highway engineers and other state and county officials having to do with the construction and maintenance of roads are just as prone as the average motorist to blame motor truck travel for the destruction of highways. The result is a decided tendency to restrict in size, weight and speed motor trucks permitted to use the highways; this despite the fact that the highest efficiency in motor transportation is secured by the heavy weight, large capacity motor truck. This tendency has already resulted in the enactment of legislation in several states. To offset too radical action in this direction motor transportation interests prepared a short time ago a set of restrictions for the guidance of legislators, which would permit the use of the highways by trucks of load capacities up to six tons, and on many well built roads up to seven and a half tons.

From the economic standpoint the development of highway transportation by motor truck lies in the direction of the use of larger capacity units and not in the limitation to the smaller sized vehicles. This means that highways, if transportation efficiency is the goal, must be constructed and rebuilt to carry satisfactorily heavy motor trucks of large load capacity even exceeding the largest now in use. It is not difficult to picture the economic handicap to railroad transportation, and with it the curtailment of the general business development of this country, if the railroads had adhered to the forty pound rail, instead of advancing steadily to the seventy, eighty and ninety pound rails, which make possible the huge and powerful locomotives and heavy trains now generally in use. The situation is identical in the case of the highways except that these are publicly owned and intended for the free use of the public in general, while the railroad rights of way are privately owned and used.

CONSIDERING the respective efficiencies of various sizes of motor trucks we find that the weight of the vehicle, *i. e.*, the non-paying load carried, per ton of load carrying capacity varies inversely as the capacity. That is, the average weight in tons of motor trucks per ton of capacity is two in the case of the vehicle capable of carrying a half ton load, and just half of this, or one ton, in the case of the average vehicle able to haul a seven and a half ton load. Considering other sizes the average one ton capacity motor truck empty weighs a ton and a half, the three ton capacity truck just under four tons, the six ton capacity truck six and three-fifths tons, while the weight of the average seven and a half tonner, empty, is just equal to its load capacity. The same ratio of increasing efficiency will hold for considerably larger sizes.

In the matter of the initial cost of motor trucks there is also a marked gain in economy with the larger capacities. The cost per ton capacity in the case of the average half ton truck is \$2028, for the three ton capacity vehicle \$1322, and for the seven and a half tonner, \$740. These figures apply to regularly designed and built motor trucks, and do not include the converted passenger car types. There is in this case also no doubt that the ratio of increased economy will hold for sizes up to at least ten and twelve ton capacity vehicles.

Having considered the question of efficiency from the standpoints of initial cost and non-paying load carried, there remains the most important item of operating cost. Here again we find increasing economy on the per ton load capacity basis, not in a few or even a group of items, but in practically every charge coming under the head of op-

### For Example

Take radiator construction as an example of GMC thoroughness. This vertical-tube, continuous fin core is the most efficient known. It does not depend on solder for assembly strength. It is firmly bolted together. It rests on two brackets bolted to the chassis frame; no springs or dashpots are used.

One GMC and one driver are doing the work that 16 horses, 4 drivers and 4 wagons used to do for the New Dells Lumber Company, Eau Claire, Wisconsin.

Starting at 7 o'clock in the morning, this GMC truck makes 20 to 30 trips a day, delivering green mill wood over town under all conditions of weather.

It hauls 3½ tons at a load and is always on the job.

Estimate the cost of feeding, stabling, grooming and harnessing 16 horses. Figure the upkeep of four wagons.

Then figure the wages of four drivers, and consider the employment problem involved.

This is a typical example of GMC truck utility. Your business may be different, but among the GMC models, ranging from ¾ ton to 5 tons, is one admirably fitted for your work.

Behind every GMC is the backing of the General Motors Truck Company and its policy of plain, honest quality.

Let your next truck be a GMC.

erating cost, from fuel to depreciation, and from driver's wages to insurance. Taking data applicable to normal conditions it is found that the operating cost in cents per ton mile is 26.45 for the two ton capacity truck, 21.65 for the five ton capacity truck, and 19.00 for the seven and a half tonner. Comparing the two ton capacity truck with one of five tons we find that in increasing the load carried by 250 per cent, the operating cost is decreased 18.2 per cent; while comparing the three tonner with the seven and a half, there is also a 250 per cent load capacity increase, with a decrease in operating cost of 22.8 per cent. Unquestionably this ratio will hold good for considerably larger sizes, so that maximum efficiency in motor transportation must be sought in vehicles with carrying capacities far beyond anything in use today.

## Why Our Aeroplanes Stayed Up

The whole truth concerning our De Havilland Four army aeroplanes probably never will be published. "When a government learns technical questions thru bitter experience, it sometimes is neither necessary nor advisable to relate the whole grim adventure," says E. T. Bronsdon in *Popular Mechanics*.

"When an American plane took the air in France no one could prophesy, with better than an even chance for correctness, whether the machine would return driven by its propeller or have to volplane to safety. A sinister percentage had the experience of mounting to the clouds, starting blithely after Fritz, and then having the wooden propeller suddenly fly to bits!

"The crux of the difficulty lay in the fact that a propeller is large. It cannot be made of solid metal, because it would overweight the machine. Wood is by far the best material, but wood has a high percentage of moisture content, even when thoroly air-seasoned.

"The experts of the Forest Products Laboratory of the United States Department of Agriculture succeeded in solving the problem. After a series of thoro experiments had convinced them that no paint or varnish then manufactured could hold the moisture content of a propeller constant, they invented the aluminium-leaf method of waterproofing wood. At the close of the war, all our aeroplane propellers were being made in this way.

"At the Forest Products Laboratory, Madison, Wisconsin, aeroplane propellers made in this way were subjected to the most exhaustive tests. Chambers were set apart—one a 'Sumatra room' (where the air was kept at 100 per cent humidity), another called the 'Painted Desert' (where the air was almost devoid of moisture), and so on, covering all possible climatic conditions—and the blades made to show exactly what they could do. Now, after some of the blades have been in these chambers for several months, they still retain accurate pitch, and little moisture variation is observable."

## The Worker's Foes Within

*(Continued from page 444)*

If you don't like the stubble you are grazing on, you had better get out of the sheep class and learn to be a lion. Don't expect the crowd you go with to get you anywhere. Study how to interest your employer in the extra fine work you are doing. He is the man to promote and reward you—why waste your time and attention following and idolizing the mob?

A great man becomes great by stepping away and climbing up from the crowd. You must find and use the power in yourself. The zeal of your heart, the skill of your hand, the strength of your mind, the merit of your work, must be your silent claim for advancement. Believe in your fellows but do not confide in them. Keep your ambition to yourself. Keep your troubles to yourself—troubles multiply when you put them in the mouths of other people. Aim not for the approval of your equals or inferiors but for the approval of your superiors.

### VI. THE FAIR WORKER FIGHTS PREJUDICE

**T**HE common foe of employer and employee is a constitutional feeling of class hatred. This must be overcome and harmony brought instead, before the people who have the money and the people who work for it can be associated properly and effectively.

A great industry mobilizes and moves like a great army. Suppose all the privates in the army hated, mistrusted, lied about and leagued against the captains, how fast would the army go on to victory?

You are in a business war. You have opponents and rivals, watching their chance to beat you. If you plot against, or even talk against, the captains of industry who lead you, at worst you are a traitor and at best you are a fool. Remember that most of the captains of industry gained their promotion strictly on merit. They were once privates like yourself. Carnegie, Schwab, Edison, Ford, Hill, Huyler, Bell, Curtis, Pulitzer, Eastman, Willard, Woolworth, Vanderlip, Wanamaker, all rose from the ranks of poorly paid, hard working employees. They rose not by rebellion of heart, but by resolution of will and reconstruction of method. The way to advance is not to fight your employer, but to delight him.

Reform by force always fails. A man must like you before he will listen to you. Make your employer like you more, if you want him to listen to you more.

Vice-President Marshall has said: "I believe that every inequality that exists in the social and economic conditions of the American people is traceable to the demands of interested classes for class legislation." Are you as eager to have the labor laws fair to your employer and to other employees as you are to have them favorable to you?

Ole Hanson, the powerful, picturesque Mayor of Seattle, has views on

this subject. Ole is the man who broke the general strike in Seattle—the first Bolshevik revolution of its kind in America. He believes that any class is always unreasonable, as a class. Hear him: "I thought I had a mighty good labor record in the legislature—for passing the minimum wage act, the eight-hour day law, and for all sorts of progressive, pro-labor legislation. But labor fought me when I ran for Mayor. I told 'em that in six months they'd say I was the best Mayor they ever had. Sure enough, they came around and made me an honorary member of their biggest union—the boilermakers' union—and gave me a membership card engraved on silver. Now they're assailing me again, tho the end of the strike left Seattle the best union, closed-shop town in the United States."

Ole won his war and became nationally famous overnight. How? By defying all parties, and sticking to the people. Hear him again: "I don't want a machine. I've taken too many apart. I want the machine against me. A man who won't leave his party for the good of his country should leave his country for the good of all parties."

Just a few years ago Henry Ford was a day laborer. Now he is a multi-millionaire and a world leader in his line. First as employee, then as employer, he proved the way to succeed. Now he is teaching others. We quote extracts from a recent article he wrote for his *Dearborn Independent* concerning the folly and wastefulness of class war:

Men are divided not by the kind of work they do, but by the kind of men they are. Because one man is at the machine end of an industry and another man is at the management end, that is no reason why human relations should be broken between them. That is no basis for class distinctions. If the manager thinks it is, he is wrong. If the machinist thinks it is, he is wrong, too. We were meant to get along one with another. People always think better, work better, see more clearly, when they are in harmony with the people whom they know. But their minds are clouded, their hands are heavy, when they carry within them the feeling that they are at odds with their kind.

Better personal relations everywhere is the greatest need of the world just now. All that looks dark on the horizon of modern life is really the result of bad personal relations. Trace down your troubles, and see what an amazingly large influence is exerted on your life by what you think of other people, and by what you think other people think about you. Wrong personal relations are the greatest obstructions that a man can meet. Right personal relations mean that we know one another, feel good will toward each other.

About a hundred of the richest and largest American factories, business houses and corporations have put into everyday practice the fundamental principles of right human relationships. The outcome has been little short of miraculous. Here is what happened in a big piano factory—and we could cite dozens of other cases—when a really democratic system of administration was fairly tried out. The workers themselves report that the new, just, friendly, cooperative system has in-

# Try This Interesting Experiment

It is something *everybody* can do.

It is something you *must* do, if you would ever be more than a drudge.

It will bring you freedom from worry.

It will make you happy, and independent.

It is wonderful insurance.

It puts you where you can grasp opportunity when it comes along.

It gives you a vacation when you need it.

It means more advantages for your children.

It denotes character and stability.

It puts you out of debt.

It is the beginning of Success.

Try it.

It is—**SAVING!**

It is now made easy by a new system, and interesting.

Almost as fascinating as a game.

It is the Budget System of Saving and Making Money.

You have read about it in the magazines and newspapers.

All authorities endorse it. It stops you from slipshod spending.

It saves the money that now slips through your fingers—

puts it where it will do you some good when you need it.

Thousands of happy, successful families use it today.

It is fast becoming universal among worth while people.

A business principle applied to the home—

that's what the Budget System is.

It shows you in advance the minimum amount you can save.

A Chicago family beat their Budget by \$65.00 last January.

That's getting ahead.

You can do the same.

You have always intended to save more.

You have worried about the high cost of living.

You have wondered where all your money went to.

Take that last \$50.00 you spent.

What have you got to show for it?

How much of it can you account for?

Can't you account for all of it?

No?

Then you are a reckless spender.

Just such methods keep millions poor.

They cause hand-to-mouth living—

and destitute old age.

The Budget System corrects this evil.

But learn the Budget System correctly at the start. It's so simple.

An accountant named Palmer devised a wonderful Budget Book—

based on seven years actual experience in the home.

It tells you all about starting a Budget—

and how to keep it up.

Then there are pages to last you two years.

By Palmer's System it only takes you a few moments each day.

A grammar school child can do it.

## USERS ARE ENTHUSIASTIC

I am wild about this book, the one I should have had long ago.  
T. B., Watertown, Fla.

I kept tab on house expense for 6 years. When I told my folks it averaged \$40.00 a week they laughed at me. We are 10 in the family. Taking the book home I told one of my daughters to put everything down from January 1st to date. When we closed the month of January it amounted to \$174.79. It surprised them all. I am sure I can save what I paid for the book in a week, don't need to wait two years, as it is an eye opener to the folks at home. Be sure and send me another book in December, 1920.

R. K., Odeholt, Ia.

I am very much pleased with same. Enclosed please find money order to pay two copies of this great book. Kindly send me another copy by parcel post, as I desire to turn same over to a close friend.

D. O. R., Frankfort, Ky.

Will you please accept this check and forward one copy of this book? I have seen a copy of this book and it is just the article I've been looking for for the past year or so.

W. L. F., Alexandria, La.

I gave the book to a friend of mine for a wedding present and if I am not mistaken will prove the most valuable present I could have given him. Kindly send me another of these books for my own use.

W. G. V., Kansas City, Mo.

Attached herewith you will find check in payment of your account against me, and for the balance needed that you mail your Household Money Saver to the following four parties.

A. E. K., Cleveland, O.

It is all in one handy volume—

well bound,

convenient,

handsome.

You'll be proud to show it to your friends.

But prouder still to enjoy the advantages it brings to you and those dear to you.

You won't be without this wealth-creating book if you see it.

We want to send it to you *at our expense.*

You don't even need to send postage.

Merely mail the coupon.

We send the book—

all charges prepaid.

You keep it five days.

Quickly you will see that it will pay for itself several hundred times.

You will see why users are so enthusiastic about it.

You will want to keep it.

No matter whether your income is steady or variable.

No matter what season of the year.

You will never be without Palmer's Household Money Maker if you see it.

That's why we make such a liberal offer.

Keep it five days.

Then send us the purchase price—

only three dollars.

Think what a trifling sum this is.

It is less than half a cent a day, as the book lasts two years.

Read the letters in this ad. They are pouring into our office every day.

You, yourself, are likely to write us a letter that will appear on this very page.

But the first step is to send the coupon.

**DO IT TODAY!**

The quicker you get Palmer's book the quicker it begins to save you money.

**ACT NOW!**

KRIEBEL & CO., 644 Home Insurance Bldg., Chicago.

## KRIEBEL & CO., 644 Home Insurance Bldg., Chicago

You may send me Mr. Palmer's book, prepaid. If I like it I will keep it. If I don't like it, I won't keep it. If I keep it I will send you \$3 within five days. If I don't keep it I will mail it back to you within five days.

Name \_\_\_\_\_

Address \_\_\_\_\_

For the convenience of those who wish to remit cash with order we allow a cash discount of 25 cents, making the price of the book \$2.75. If you remit cash with order you may keep the book five days, then return it if you do not want it and we will refund your money.

creased factory output and workmen's income at the same time, produced better instruments yet reduced working hours, put every man to the height of his quality and quantity capacity, made inventors out of ordinary workmen, absolutely stopt class war and personal misunderstanding, raised the whole factory plant to the high-production level of comradeship, fellowship, faith, courage, ambition, optimism, enthusiasm.

A book describing methods of harmonizing, humanizing and energizing the workers and managers of a business will be namd on request of any owner, employer or department head.

### VII. THE ENERGETIC WORKER FIGHTS LAZINESS

**W**ORK, work, and then more work, is the universal recipe for success. You have a right to ask an eight-hour day, but you have no right to take it when you get it. You are cheating yourself when you do. There is no industrial, financial or intellectual success waiting for a man who never forced himself to work more than eight hours a day. Most big men during a long period of their career have workd from ten to fourteen hours a day. Viewing their contest with Fate and the world as a glorious game, they grew so interested they couldn't stop liking it, playing it, planning for it. The only thing that makes a real man stop work is warning of a breakdown. If by reason of over-exertion your heart, brain, eyes, nerves or digestive organs refuse to function properly, you should call a halt, but seldom otherwise.

The closing hours of your job are the opening hours of your opportunity. Get the habit of spending at least an hour a day on the average of your spare time in outside work, or home study, or personal training for leadership. You never saw a real leader start to lop around the minute the whistle blows for quitting time. The man afraid to do more or better than he is paid for does not know or will not do the work he is made for. When a man has found his life work, you can't make him stop it by a five o'clock whistle any more than you could make a flower stop blooming, or a bird stop singing, a river stop flowing, or the sun stop shining.

Thomas A. Edison till past seventy years of age continud a lifelong habit of working all day and then up to midnight. He has recently emphasizd anew the folly of inactivity. He says: "The buying public is hungry for goods of all kinds and the purchasing power of the people is enormous. The only danger is the business man who thinks he is long-headed and hangs back when he ought to go ahead. The man who lets his business run down at the heel waiting for prices to reach their lowest level is likely to lose a great deal more than he gains, and the percentage is heavily against him."

The colossal achievements of Mr. Edison but illustrate his counsel to employers and employees alike: "Don't hesitate; go ahead."

We are the richest and most power-

ful country on the globe. Millions of starving, homeless people in Europe are waiting to be fed, housed, clothed, equipped and supplied with the necessities and comforts of life. The job is mostly ours to put thru. Every stroke of honest work we do now, clean up to our limit, proves that President Wilson told the truth when he said: "The industrial forces of this country are the saviors of free men everywhere."

#### VIII. THE LOYAL WORKER FIGHTS INDIFFERENCE

ARE you more anxious to please your customer than you are to gratify yourself? The customer employs your employer, and if you don't take a hearty, steadfast interest in pleasing your customer, you are likely in the end to lose your job. Edward A. Filene, Boston merchant, recently said: "No adjustment between the employer and employee can be considered worth while, or of eventual benefit to either, unless it offers results in lessening the cost of service to the consumer." Don't request or want higher wages if they would mean higher prices to your customers. Why? Because your competitors would undersell you, business would fall off, and your wages would finally drop lower than ever. Plan how to give better merchandise or service to your customer—then trade will improve so that your employer can afford to pay higher wages.

Here is the great weakness of the entire labor movement. Workmen as a whole do not think, feel, plan, purpose, or care for the success of the business as a whole. They are paid to think as well as work, but they will not think.

The great curse and handicap of many American workers is that they are interested only in their pay, and indifferent to the principles, purposes and policies of the business from which they draw their pay. The platforms recently adopted by the trade unions of Chicago and New York illustrate this point. They stand for a tax on all property whether land, inheritance or income of the wealthier classes, but they fix no penalty for prosperity of employees and they assume no responsibility by employees in the direction or promotion of the business.

If you were a machinist and your employer, who didn't know one machine or tool from another, came to you and demanded that he be allowed to run your job, wouldn't you think him a first-class idiot? That is precisely what the Bolshevik wants to do with the job of the employers of the world. The employers are experts in finance, organization, management, publicity, economy, salesmanship, and other sciences; how could the average workman, totally ignorant of these things, be a supervisor of these departments? A sane man would call the attempt sheer lunacy.

A British captain of industry says that the way to handle a large force of men is to win their cooperation by appeal to their intelligence and their interest. We quote his words. "I expect all my fellow employees, whatever may

## The Science of Being Right

Business judgments involving millions must be founded on facts.

be their work, to help. I know that they can help improve our organization and our product. I want to see them grow in management skill and point of view. Our men see things which we cannot see. No man can be a judge in his own cause. If we tolerate this, we have the formula that might is right, something that we have just defeated. We want an Anglo-Saxon, not a Prussian, ideal of industry and its management. That ideal is of service to every man engaged in it." The employees of this great industrial leader, following the principles he has laid down, are contented, progressive and prosperous.

The labor class of Germany and Russia tried rebellion. The outcome was destruction of the factories and homes of the workers themselves. The labor class of England tried coöperation. The outcome was an improvement of living and working conditions all along the line.

Coöperation may be defined as a blend of science and sympathy. Coöperation will cure almost any public or private ill of a social or financial nature. The coöperative movement in Europe is growing ten times faster than the population. The people over there have organized coöperative societies to put under control of the workers themselves the business of manufacturing, wholesaling and retailing the necessities and comforts of life. When the grocers of England raised the price of sugar to twelve cents a pound, the coöperative societies held the price for their members down to five cents a pound. All common war-time prices were kept reasonable in European countries where the coöperative movement was well organized. In such countries flour made in America was sold for less than right here where it was made.

When the workers of America substitute construction for destruction as a remedy for industrial evils, they are likely to find that the employers of the nation, the officials of the Government, and the people as a whole, are with them to the last man. Every worker must be a philanthropist in a small way, just as most of the big employers are philanthropists in a large way, before the problems of either class can be solved. You cannot lift yourself as high as you want to go until you love your neighbors and try to lift them, too.

### IX. THE AMBITIOUS WORKER FIGHTS IGNORANCE

THE basis of promotion is education. It is almost invariable that the man promoted first in a business organization is the man who devoted spare time to learning more than he was paid or expected to know. The basis of coöperation is also education. Recognizing this fact, the leaders of the British labor movement years ago founded workmen's colleges, the result being that labor leaders in England are said to be more highly educated than the average employer of the United States. Meeting their employers as gentlemen on equal terms of culture and sympathy, representatives of labor in England arrive

# Is Your Life's Blood Trickling Away—

When you see red blood escaping you know your vitality is escaping with it, and you promptly stop the flow.

Millions of people live on, indifferent to the loss of vital power even more serious than the loss of blood—the LOSS of NERVE FORCE.

If you are tired; depressed; nervous; irritable; sensitive; cannot sleep or digest your food, it means that your nerve force is depleted through overwork and nerve strain. Stop the leak at once and build up your nerve force, for your health, brain power, strength and endurance directly depend thereon.

### What Readers Say

"I have gained 12 pounds since reading your book, and I feel so energetic."

"Your book did more for me for indigestion than two courses in dieting."

"My heart is now regular again and my nerves are fine. I thought I had heart trouble, but it was simply a case of abused nerves."

"Your book has helped my nerves wonderfully. I am sleeping well, and in the morning I feel so rested."

"The advice given in your book on relaxation and calming of nerves has cleared my brain. Before I was half dizzy all the time."

A prominent lawyer in Ansonia, Conn., says: "Your book saved me from a nervous collapse, such as I had three years ago. I now sleep soundly and am gaining weight. I can again do a real day's work."

## Wonderful Book on the NERVES

Paul Von Boeckmann, the nerve specialist, has written a remarkable book which teaches you how to save your nerve force and care for your nervous system. It explains how to soothe, nourish and calm the nerves.

Price of Book is only . . . 25c

quickly at a statement of terms and solution of difficulties. When a deaf and dumb man talks to you, he cannot make himself understood. You must know his language before you can reach an understanding with him. The capitalists move in a different world and speak a different language of culture from the majority of their employees. What separates the classes and the masses is not lack of coin but lack of culture on one side or the other. The Federal Mediation Commission puts the matter this way: "American industry lacks a healthy basis of relationship between management and men. There is a widespread lack of knowledge on the part of capital as to labor's feelings and on the part of labor as to problems of management."

John D. Rockefeller, Jr., in a recent article in *The Forum*, explained how ignorance leads to misunderstanding. The remarkable success of the Colorado Plan of Employment Management evolved by Mr. Rockefeller has given him high standing as a labor leader as well as one of the largest capitalists of the world. He says in part:

A gulf has grown up between capital and labor, which is ever widening. Industry has become highly specialized. The workman of today devotes his energies as a rule to the countless repetition of a single act or process, which is only one of a hundred operations necessary to transform the raw material into a finished product. Very naturally the worker loses sight of the significance of the part he plays in industry, and feels himself but one of the many cogs in a wheel. It is necessary that he should have contact with those who are likewise related to the industry, so that he may still realize that he is a part and is a necessary, tho inconspicuous, part of a great enterprise. Thus only can common purposes be kept alive and individual interests safeguarded.

Do you know what and how many of the various things you want accomplished for the workers of America have been or are being accomplished for the workers of Europe by the coöperative societies already mentioned? Do you know how their methods could be adopted or adapted here? Do you know how you could start such a movement? Answers to questions like these could probably be offered by the head of the public library nearest you.

Do you know the wonderful things accomplished for and by the workers in the big shops, factories, railroads, mills and offices, by the new American system of industrial education?

Do you know if you are an expert in your line—or qualifying to be one? The answer to this question if put by your employer may probably be had from the Personnel Department of the United States Army at Washington, or from the Bureau of Salesmanship and Research of the Carnegie Institute of Technology at Pittsburgh. The vocational test plan organized by Colonel Walter Dill Scott of the Carnegie Institute did great things for men of the army. At the beginning of the war the scarcity of experts was the great problem. In a single group of 250,000 soldiers who professed trade ability and who were "trade tested," only 6 per

## Called "The Gem of the World"

NO traveler to Japan should miss a trip through the Inland Sea. Rich as Japan is in scenic beauty, the natural grandeur of this fairy waterway excels all else. 240 miles from East to West and from 3 to 30 miles from North to South its four channels communicate with the outer sea.

The shores of granite rock are splashed with gaily colored flowers. The islands which dot the basin contain many beautiful parks, all the highest examples of the Japanese landscape gardener's art. The waters of the Inland Sea, usually smooth as a mirror, contain more than one hundred varieties of fish.

An ever-changing panorama of scenic beauty delights the traveler. The Sacred Island of Miyajima with its great Torii Gate rising from the water to a height of forty-five feet, is the main point of interest with numerous side trips about the islands for those who wish a more extended tour than that offered by the main line steamships. Numerous ferries and launches provide transportation and overnight accommodations may be had in the native inns.

You can secure accurate information and advice on Japan through the Japan Society, an organization of 1400 Americans, which places at your disposal its Trade, Travel, Service, News and Publication Departments and its Trade Bulletin.

How may we serve you?

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

As a war measure, the course was reduced from three years to two years and six months. The cessation of hostilities will not end the need for nurses abroad; they will be needed, in large numbers, for reconstruction work, and for the establishment of schools of nursing in the different countries of Europe for a long time to come. We plan, therefore, to continue the course of two years and six months.

For information write to MISS AGNES S. WARD, Superintendent

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

## Hudson River by Daylight

Now is the time to enjoy the Hudson and its early summer glory. The Day Line offers a most enjoyable route to all northern summer resorts.

### THROUGH SERVICE, NEW YORK and ALBANY

Big fast steamers. Music. Restaurant. Ideal one-day outings to Bear Mountain, West Point, Newburgh and Poughkeepsie. All through rail tickets between New York and Albany accepted.

## Hudson River Day Line

Desbrosses Street Pier

THE INDEPENDENT 119 West 40th Street, New York

cent were found to be experts. This proportion would doubtless hold in the case of civilians who imagine themselves experts. The official testing and classifying of 3,655,000 soldiers on vocational grounds was the biggest achievement of the kind ever attempted by any nation. Colonel Scott says "if a call for 1000 shoemakers had been issued the men could have been supplied in a very few hours' time." Every industry should be thus classified on a basis of expert knowledge.

### X. THE RELIABLE WORKER FIGHTS IRRELIGION

**F**AITH is the one force to steady a man thru all difficulties and sustain him thru all discouragements. The height of your future is proportional to the breadth of your vision and the depth of your belief. Doubters do nothing.

A religious census of the most prosperous and famous business men of the United States shows that about 80 per cent of them are identified with some form of religious work. If you are not, your chance of succeeding is only a quarter as good as that of the man who is. A moral outlook and spiritual insight clears your brain of business cares, nerves your will for business projects, aids your judgment in business deals and crises.

The first aim of the Bolshevik seducer and sly talker is to make you doubt God, your neighbor and yourself. The Bolshevik has no God.

Do you know what the churches of the country are doing to promote the interests of the workers and improve conditions for them? Have you read the social welfare program adopted by the Federal Council of the Churches of Christ in America? If not, ask one of your local pastors how to obtain a copy. The most progressive church leaders are advancing the cause of labor in various ways that a keen, ambitious worker should know about, merely for his own good.

You do not have to be orthodox to be religious. You may have just a broad, humanitarian ideal of the fatherhood of God and the brotherhood of man.

Your feelings must be right if your knowledge, power and skill are to be effective. And all true feeling is religious feeling. And the sum of the whole matter? Just this. We must quickly drive out Bolshevism and make its return impossible. The Bolshevik hates a good worker and a strong man. He rejoices in a poor worker and a weak man. The sure way, then, to drive out Bolshevism is for every American to make himself a better worker and a stronger man.

The foes of national democracy are also the foes of personal efficiency. We have named the ten worst ones—anarchy, disease, greed, immorality, mobocracy, prejudice, laziness, indifference, ignorance, irreligion. How are you fighting these foes? Which do you consider the most dangerous to you? Find which one is, mass your mental forces against that one first. And don't stop the fight short of unconditional surrender!

elected "Grand Duke of Mongolia." Mongolia belongs to China, but before the war had been largely alienated by Russian intrigue.

Five hundred women orators will go into the hundred and fifty assembly districts of New York State and present arguments for voting the Republican ticket.

In May 333,000 American soldiers sailed home from France. These included the very last of the National Guard and Draft troops. Only Regulars are left. The remaining troops of the Archangel Expedition will probably be out by mid-June.

A budget system of Government finances to replace the present system of departmental estimates and appropriations without executive responsibility has been reported upon favorably by the Senate Committee on Rules.

Control of railroad, telegraph and telephone rates by the Federal Government has been upheld by United States Supreme Court decisions. Suits had been entered in 25 states. The decision also specifically upheld freight and passenger rate increases made by the Railroad Administration a year ago.

Indictments charging conspiracy to defraud the Government of \$30,000,000 in purchase of munitions supplies have been returned by the United States Grand Jury against Captain Sotarios

Nicholson, connected with the Ordnance Department; Hugh Browne, a millionaire; Fred C. Collins, Vice-Consul of Greece, and an unnamed United States Army officer now in France.

Illinois was the first state to ratify woman suffrage, and was followed by Wisconsin and Michigan the same day. The Illinois Senate vote was unanimous, the House vote 132 to 3; the Wisconsin Senate was 23 to 1, and the Assembly 54 to 2. In Michigan action was unanimous in both houses.

As a result of the street railway strike in Detroit which completely tied up the system last week, the Mayor has asked the City Council to vote \$10,000,000 in bonds for the purchase and municipal operation of street railways as a move against future strikes.

Pittsburgh detectives vigorously investigated the tale of a woman who alleged that she knew all about the nationwide bomb plot of anarchists and located the scene of manufacture as Bessemer, Pennsylvania. No evidence was found. The woman admitted that her "confession" was a fabrication.

The request of Director General of Railroads Hines for \$1,200,000,000 to run the railroads was denied by the House Appropriations Committee, and a bill was reported appropriating \$750,000,000 to meet immediate needs. Better business and larger profits on freight traffic are expected to help the present situation.

More than a hundred New York physicians have protested against the proposal of the City Health Commissioner to take finger prints of every patient for whom habit forming drugs are prescribed, on the ground that it would constitute a barrier to confidential relations between physician and patients.

The Boy Scout drive for a million adult members at \$1 each was inaugurated at a New York Hippodrome mass meeting, with speeches by former Secretary of the Treasury McAdoo and other notables. Ten million boys in the United States are eligible for Boy Scout membership, and the nationwide campaign is after them. Only 375,000 are now members.

Eight large New York banks have announced they are prepared to advance over \$12,000,000 for mortgage and building loans within two months to help solve the housing and soaring rent problem.

There are eight million women in industry in the United States, representing 22 per cent of all persons in the country engaged in gainful occupations. More than a million are employed on home farms.

The Standard Oil Company at Elizabeth, New Jersey, has bought thirty-five acres of land and arranged for its employees to build their own homes and pay for them on a monthly basis.

## Congress Is Bothered by Mexico

**T**WENTY-FOUR hours of campaigning by American troops below the international boundary has served again to draw the attention of Congress and the American people to the Mexican situation.

After seven years, Congress is tired of having a situation in Mexico to worry about. It is definitely threatening, unless steps are taken by the executive branch of the Government, to begin itself the search for a solution of the Mexican problem.

The impatience of Congress was given voice in a speech by Speaker Gillett before the recent Pan-American Commercial Congress, which called forth a heated retort from Dr. Juan B. Rojo, the Mexican charge d'affaires. Mexico was the plague spot of the Americas; it needed cleaning up, Mr. Gillett said. He implied, but did not say, that the work might well be done by American troops.

However capable it may be, Congress, technically, is without power to undertake a solution of the Mexican problem. It can neither open diplomatic negotiations nor order troop movements. For the time being it is looking to President Wilson to act. If he does not see his way to doing so, Congress will consider bringing pressure to bear upon him. The present Congress, controlled by the President's opponents, would probably have little regard for his feelings in the matter.

The excursion of General Cabell's troops into Mexico in pursuit of Francisco Villa is regarded by Congress as the beginning of a new series of bitter misunderstandings with the southern republic. Congress as a whole does not want no Militia, but it wishes to see the Mexican problem settled once and for all, and protection to American lives and property guaranteed. If open

warfare is the answer, Congress is willing that the answer shall be given at a time when the United States is fully prepared.

Congress has no favorites among the Mexican factions. It has no liking for Carranza, but if he is able to protect Americans from banditry, he is welcome to remain in control so far as Congress is concerned. Villa is held in ever greater disfavor. Reports that complete order had been restored in Mexico prior to the latest outbreak in Chihuahua are regarded by Congress as propaganda, to be taken with a large pinch of salt.

While Congress remains neutral, the Republican majority finds the attitude of the executive departments puzzling. General Felipe Angeles, proclaimed president of the Mexican republic by General Villa, is well liked by State Department officials. As a diplomatic representative of Mexico, and later

as a representative of the French Government in this country, General Angeles made many friends in official circles. Naturally, General Villa is held in abhorrence, but as late as two weeks ago publication was given to reports that the aspirations of General Angeles were looked upon with some favor by this Government.

Sending American troops into Juarez, after Americans in El Paso had been wounded by Mexican bullets, was generally approved by Senators and Representatives, but there was some protest in both houses against the apparent coöperation with Carranza forces in the pursuit of Villa's men fifteen miles beyond the city.

"This constitutes a tacit offensive military alliance between the United States and Mexico of which the Congress has not been apprized," said Representative Gould, a Republican Congressman from New York. Mr. Gould introduced a reso-

Baltimore American

An elephant-sized job

Western Newspaper Union

For the first time women are taking an equal part with men in political organization thruout the country and in the preliminary presidential campaign. Mrs. Medill McCormick, of Chicago, heads the Republican Women's National Committee, which is in co-operation with the Republican National Committee of which Will H. Hays is chairman

lution in the House providing for a thoroughgoing investigation of political, economic and military relations between the United States and Mexico to be made by a joint committee of the Senate and the House.

A resolution was drawn by Senator Watson, of Indiana, asking that the Senate be informed whether the purpose in occupying Juarez was to "assist the Carranza garrison or to protect American lives." There is public rejoicing by the Republicans, for political purposes, over what they call "the conversion of the Administration to the theory that Americans in Mexico should be protected."

Senator Fall, of New Mexico, deplored the withdrawal of American troops. They should have gone on, he said. The occupation of Juarez, whatever the purpose, has fanned the Mexican spirit of revenge and endangered American lives and property all over Mexico. He advocates policing the entire republic with United States troops.

A full investigation of the Administration's Mexican policy during the last seven years will be advocated by Republican members of the Senate Foreign Relations Committee, if the Senate is not informed whether there was an agreement with Carranza whereby his troops should be reinforced if border towns fell in danger of capture by Villa.

The fact that Dr. Rojo and Dr. Candido Aguilar, a special envoy of the Carranza Government, were invited to the State Department immediately after the occupation of Juarez, and given elaborate explanations, would seem to indicate that there was no such understanding. Whatever the circumstance a sharp protest against the invasion of Mexican territory is expected from General Carranza. If such a protest is sent it probably will be designed almost wholly for Mexican home consumption.

The first indication that there was to be a new "Mexican situation" came about a month ago, when undisguised propaganda on behalf of General Angeles and

General Villa appeared in the American press. Villa denied that he had any hand in the raid on Columbus, New Mexico, which caused the "Get Villa" expedition. He was many miles away when the raid took place and could prove it in a fair trial, he said.

Attention out of all proportion to its value has been given to Mexican news. The playing up of border dispatches is perhaps the natural reaction, resulting from the suppression of all such dispatches at the request of the State Department during the war. Many sensational reports were circulated in Washington a year ago, among them a well substantiated report that American forces were at strategic stations ready to enter Mexico for the protection of the Tampico oil fields. No attention was paid to them by Washington correspondents.

THE first concrete evidence that the Villa movement had attained an alarming growth came in the form of a request by Carranza that he be permitted to move troops thru American territory to cope with the bandits. The State Department on May 26 asked and received such permission from the governors of Texas, New Mexico and Arizona. However, on May 28, the department announced that it had denied Carranza's request. This action was taken on representations by citizens' organizations of the border states that Villa would regard the granting of Carranza's request as "siding with his enemies," and would seek revenge in raids on American border towns and molestation of Americans in Mexico.

On June 4, Governor Hobby, of Texas, sent anxious dispatches to Washington asking that troops be concentrated in Texas. His fears were believed to be exaggerated. Villa's assault against Juarez, leading to American occupation of the city, occurred on June 15. Border representatives in Congress predict another Santa Isabel massacre as the result of the action by American troops and are openly for complete American intervention.

Congress feels that it needs more information on Mexico, but it wants no continuation of the policy of "watchful waiting." Congress wants action—just what sort of action it is not sure. Were it not for the danger to American lives and property, however, a large proportion of both houses would be against any interference with Mexico's internal affairs.

Some members think it important to learn from what sources Villa is receiving his financial support. An investigation of this phase of the situation, they think, would serve to clarify events in Mexico and to set American public opinion right on Mexican affairs.

Now that it is being more generally conceded by the opponents of the League of Nations that the covenant probably will be ratified by the Senate, some members believe that an American mandate for Mexico under the League presents the most acceptable solution. Mexico is not designated as a League member, and, according to General Aguilar, she will not seek membership at this time. This situation, in the view of one small group in the Senate, makes possible an American mandate for Mexico until she is ready for League membership. That Mexico would consent to such an arrangement is almost inconceivable, but these senators say, with an appearance of being informed, that stranger things have happened.

The one policy the Republican majority in Congress will not approve is a policy of doing nothing about it. Democratic senators take the Juarez action to mean that the Administration, now that the war is over, has decided upon its course. Senator Penrose, whose words always are well considered, summed up Republican sentiment thus: "We want a firm policy in Mexico. We want

# When the Conquering Hero Comes Home

*Underwood & Underwood*

New York and Washington could not do enough to welcome Sergeant Alvin C. York when he came back to the United States on one of the recent troopships after a career with the A. E. F. that heads the honor roll of war achievements and earned him the Congressional Medal and the Croix de Guerre with a palm. But Sergeant York couldn't stop long. He wanted to get back to a small cabin in Pall Mall, Tennessee, and to his wedding with Miss Gracie Williams

*Underwood & Underwood*

The gun with which Sergeant York got the habit of straight shooting that enabled him in one day to take 132 Germans is the proud possession of small brother Bobby now. So is one of the German helmets

Mrs. York - if she is like most mothers - probably expected her son to come home a hero. Small sister, in the photograph above, makes no secret of her adoration

no more pussy footing." Administration men believe that action is in prospect.

Just at the time that the American troops were occupying Juarez and driving the Villa band back into the country, Secretary Baker appeared before the Military Affairs Committee of the Senate to urge that the size of the peace time army, which the House cut to 300,000, shall be made 500,000, as it was in the original bill. The small army would be inadequate, he said, if it should be necessary to keep a large force along the border.

R. M. B.—Washington

## Nationalism in Social Work

A NEW sense of nationality, a new consciousness of the national character of social problems and of national responsibility for local conditions, could be detected running thru the eight days' session of the National Conference of Social Work, which was held at Atlantic City, June 1 to 8. Altho the social workers of the country have been coming together once a year for nearly half a century for the purpose of discussing their common problems and methods of work; altho national organizations for the promotion of certain propaganda in this field—such as the Child Labor Committee, the Tuberculosis Association, and the Association for Labor Legislation—have come into existence during the twentieth century and have become extremely influential; altho there has always been a high degree of mobility among social workers as individuals, so that experiences have been freely transplanted from one part of the country to another and lively connections maintained by travel and correspondence, perhaps to a greater extent than among such professional groups as lawyers and physicians—still, it is evident that the events of the last two years have hastened the nationalizing process in social work, as in other fields.

The president of the conference this year was a Federal official, Julia C. Lathrop, chief of the Children's Bureau in the Department of Labor, a bureau which owes its existence, by the way, to the efforts of social workers. Various other Federal officials were conspicuous on the program, some of them, like Royal Meeker, representing established activities of the national Government, while others are connected with the new welfare activities of the national Government which sprang up during the war, such as the United States Housing Corporation, the Federal Employment Service, the Division of Venereal Diseases in the Public Health Service, the thrift campaign of the Treasury Department. The natural interest of the conference in the operations of the War Risk Insurance Bureau was recognized by the newly appointed director of that bureau, in a telegram bespeaking continued coöperation and patience in the efforts of the Government to meet its obligations in connection with allotments and allowances, compensation and insurance, to soldiers and sailors and their families.

More significant, however, than such incidents

as this or such items in the personnel of the program as have been mentioned, was the undercurrent, thru all the discussions, of poignant concern for the great national problems which the war has not created but has forced upon the attention of even the blindest—the fundamental problems of education, of health, and of an adequate income, which can be solved only by the concerted effort of the whole nation, and on the solution of which our national welfare depends. Another evidence of the advance of the nationalizing process was the prominence accorded to certain elements of the national life which have hitherto been comparatively neglected: rural communities, the negro, and the immigrant. The underlying thought in all the consideration of these problems seemed to be that the nation is no stronger than its weakest spot; that the test of the principles for which we entered the war lies in their applicability to our own conditions at home; that our boasted democracy can be only factitious so long as certain great sections of the population are allowed to labor under serious removable handicaps.

As for "Americanism" itself, it received the attention of an entire division of the conference, which held six meetings. On the program it was called, however, "the uniting of the native and foreign born in America," and the popular word which has come into use in the last two years for expressing this process was strongly deprecated, on the ground that it implied the imposition on the immigrant of an American-made product in the way of culture, instead of a recognition that he may have a contribution to make to American culture and ideals, and a desire to secure that contribution. The tendency to rely on the English language as an Americanizing reagent was also vigorously criticized. Professor Miller, of Oberlin, reminded his audience that to impose the use of English on immigrants in their daily life, to prohibit a foreign press, etc., was to adopt the methods of the most autocratic of discredited European governments and to arouse resistance rather than understanding. "What shall it profit the immigrant," said Allen T. Burns, "if he gain the whole language, but lose the heart of America?"

On the closing day of the conference, a plea was made by Edward T. Devine for more adequate representation of the nation's social interests at the council table of

the Chief Executive. He advised social workers to support the demand of physicians of the country for a Department of Public Health and the demand of the teachers for a Department of Education, in order that these two vital subjects may receive attention more nearly commensurate with their importance to the national welfare. Similarly, he urged the creation of a Department on Insurance, Compensation and Pensions, uniting the administration of the pensions to Spanish and Civil War veterans, which is now in the Department of the Interior, and that of the War Risk Insurance act, which unfortunately and illogically was placed in

© Underwood & Underwood

RAIDING THE SOVIET HEADQUARTERS IN NEW YORK  
Friday, the 13th, was an unlucky day for the Bolsheviki in New York. State police made a raid on the offices of Ludwig Martens, the unrecognized ambassador to this country from the Russian Soviet Republic, and took away a ton or so of documents and files bearing on Bolshevik activities in America. Much of the matter, it was announced, was Bolshevik propaganda for both North and South America

International Film

From these holes, about the size of a man's finger, the cicadas emerge after a seventeen-year stay underground. Often the holes are so numerous that several thousands can be counted in an area a few feet square

the overgrown Treasury Department, under the direction of a subordinate official responsible to a secretary already fully occupied with the most weighty financial duties which have ever devolved upon a Cabinet officer. If we had had the wisdom to foresee the importance and magnitude of the obligations assumed by the national Government in adopting the War Risk Insurance act, and had created an independent Federal Department to administer it, soldiers and sailors and their families might have been spared the delays and mistakes which have been so numerous and so serious as to approach the dimensions of a national disgrace. The creation of such a department now would give confidence in a better administration of the law for the future and in the ultimate correction of the mistakes that have been made, in so far as they can be corrected by financial transactions.

The response of the conference to these suggestions and the interest manifested in a review of certain proposals for Federal legislation which had just been issued by a small committee of social workers, were evidence of a disposition to look to the national Government for more substantial assistance in work for the promotion of the social welfare in the future. Without any desire to curtail voluntary initiative in social work or the responsibility of the state governments, or to promote centralization or political socialism, there was clearly manifest the conviction that the social activities of the Federal Government, as compared with its other recognized activities, should be developed and adequately supported.

## An Insect Rip Van Winkle

FROM a slit in one of the young branches of a small oak an antlike creature emerged. He ran nimbly about the branch for a few minutes, then swung himself to the underside and dropped. It was a remarkable exhibition of confidence in the teaching of Mother Nature, this jump into what for the insect was infinite space. But he landed unharmed, and without a look at the sunshine which he had seen for the first time so few minutes before he began to burrow into the earth. Down he went until he reached the end of a rootlet of the tree on which he had been born. There he built a cell, sank his sucking beak into the root to get at the sap, and settled down for a long stay.

In the busy world above men discovered the poles; kings and presidents came into rulership and passed on; men learned to fly; the world went to war and

A few minutes after emerging from their exit holes the cicadas are seen struggling out of their underground clothes. Those on the upper stalks have won their wings and in a short time will begin the intense activity that marks their brief life in the sun

fought thru to exhaustion and peace. Then one fine June evening the burrower in the earth felt an urge to return to the surface. He and his fellows by the thousands tunneled upward and presently the ground beneath the oak was pierced with myriads of holes about the size of a man's finger.

Out of the holes swarmed, not antlike creatures, but larger insects with a suspicion of wings under the rough skin. At once there was a mad scramble for weeds, bushes, trees and fence posts. Evidently this creature that had lived so long below desired to get up in the world as rapidly as possible.

His ambition achieved, the insect fixed himself in a horizontal position on branch or leaf to await the great change that was to give him wings and a place in the sun. In about an hour his skin began to split down the middle of the thorax. Followed a struggle to get out of the old suit, and within twenty minutes, on a branch quite near the spot where years before he had emerged as the small antlike creature, sat a white insect with wonderfully veined wings stretched over his back.

After that the change was rapid, and by morning the coloring had darkened, the wings had gained strength, and, uttering a shrill call of "Phar-r-r-aoh," the cicada—for our hero is none other—announced to the world and his mate that he had arrived. He was a big fellow among the members of his family, measuring one and a half inches from head to the tip of his wings when closed, and expanding over three inches. His underside and abdomen were an orange-brown; there were four or five segments of the same color on his back.

If you live in a wooded district in the middle Atlantic states or the Middle West you have probably by now made the acquaintance of this most interesting of all the insects on the American continent. Perhaps you know him as the seventeen-year locust. But you are calling him out of his name. He is properly the "periodical cicada." The grasshopper, which we have always with us, is the New World's representative of the locusts which were a table d'hôte dish of the children of Israel.

This year's visitors belong to the famous Brood 10, largest of the seventeen-year clans. Take a good look if you meet them, for by the middle of July at the latest they will have disappeared as mysteriously as they appeared, not to be seen again for seventeen years.

The periodical cicadas are divided into two main divisions, the thirteen-year cicadas, most of which are found south of the southern boundary of Pennsylvania, and the seventeen-year kind, which is the northern variety. Altho the territories of the two clans overlap they

*International Film*

## Across the Atlantic in One Straight Flight

The plane that first succeeded in a non-stop trans-Atlantic flight was this big Vickers-Vimy, with Rolls-Royce engines. The pilot was Captain Jack Alcock (left), a famous British aviator who won the D. S. C. on the Turkish front. An American who fought in the British Royal Air Service was the navigator, Lieutenant Arthur Brown (right). He was taken prisoner while flying on the western front

*Press Illustrating*

*International Film*

After flying straight across the Atlantic from Newfoundland to Ireland by navigation so accurate as to be almost spectacular, Captain Alcock and Lieutenant Brown were hindered by fog and lack of wireless from making an advantageous landing and plumped down into these Clifden bogs, damaging one wing of their machine

do not interbreed. In every respect except the difference of four years in the cycle of appearance they are alike.

Both of these main divisions are broken up into many sub-clans, or broods, as entomologists call them, most of which have been observed over a long period—some for over 200 years. Each clan spends seventeen or thirteen years underground between each two appearances, but the periods of the various clans overlap, so that there are few years in which the periodical cicada may not be found if you know in what part of the country to look for the brood due to make its bow that year.

But we have left our hero perched on his branch expanding his newly found wings and shrilling for his mate while we digressed about his family tree. As song is to be his chief occupation let's look over the musician's equipment. We find that his throat has nothing to do with the matter. The sound is produced by two small shell-like inflated drums, placed at the sides of the basal segment of the abdomen and made to vibrate by the action of powerful muscles.

For four or five weeks the male whirrs out his courtship song while his mate is busy slitting the tender young branches with her ovipositor, a twig-piercing and egg-laying instrument of wonderful complexity, and placing her eggs. At the end of this brief period the insect, that passed seventeen years of its existence in the dark, falls to the ground again, perhaps within a few feet of the place from which it emerged, dead of old age. But from the egg left by the female in the wounded branch there emerges in a few weeks the antlike larva, the new generation of the periodical cicada.

There is not space here to discuss all the moot points raised about this strange creature, but it should be said that, contrary to legend, the cicada does not sting or bite, and that even when he appears in his tens of thousands he does little permanent damage. The adult cicada does little feeding, and such damage as is caused can be laid to the branch-slitting done by the female. The weakened branches are easily broken by the wind, and when the cicada has been busy in orchards sometimes the year's crop is ruined. But in the woods that the cicada most infests no trace of permanent hurt is found, tho he may have passed in his tens of thousands.

The Indians used the cicadas for food, gathering quantities of them at the time of their emergence from the earth and roasting them. Several entomologists have

tried the dish. Most of the reports lack enthusiasm, but one man who ate the cicada fried in batter says that he much prefers them to oysters or shrimps.

## Over in One Hop

**A**LREADY we are getting used to trans-Atlantic flights. The greatest of them all, a record-breaking non-stop flight from Newfoundland to Ireland, made far less stir than Harry Hawker's failure at the same venture only a month before.

Captain John Alcock and Lieutenant Arthur Brown are the two airmen whose names will go down in history as the first to cross the Atlantic in one hop. Incidentally they are the winners of the \$50,000 prize offered by the *London Daily Mail* in 1913 for the first non-stop trans-Atlantic flight. A big Vickers-Vimy boomer, equipped with Rolls-Royce engines, was the plane that Alcock and Brown used. They made the trip of about 1900 miles in 16 hours 12 minutes, flying at an average speed of 120 miles an hour. Northwest or southwest winds favored them all the way over, but a heavy fog added enormous difficulties to the navigation.

"The wonder is that we are here at all," said Captain Alcock in describing the flight. "We scarcely saw the sun or moon or stars. For hours we saw none of them. The fog was very dense, and at times we had to descend within 300 feet of the sea. For four hours our machine was covered with a sheet of ice caused by frozen sleet. At another time the fog was so dense that my speed indicator did not work, and for a few minutes it was very alarming.

"We looped the loop, I believe, and did a very steep spiral. We did some comic stunts, for I had no sense of horizon.

"We encountered no unforeseen conditions. We did not suffer from cold or exhaustion, except when looking over the side. Then the sleet chewed bits out of our faces. We drank coffee and ale and ate sandwiches and chocolate.

"Our flight has shown that the Atlantic flight is practicable, but I think it should be done, not with an airplane or seaplane, but with flying boats.

"We had plenty of reserve fuel left, using only two-thirds of our supply."

The most spectacular thing about the flight was the accuracy of its navigation. In spite of the handicaps of

Photograph from General E. Paul

Americans in Paris made a pilgrimage on Memorial Day, 1919, to the most recent of our famous war cemeteries, a field near the city dedicated to American soldiers who fought and died in France. Each grave is marked by a wooden cross with the soldier's name and regiment

ing and the lack of wireless apparatus, which was torn away by the wind soon after the start, Lieutenant Brown followed, almost without deviation, the course he had originally planned and landed at Clifden, his announced goal. Picking a landing field in low visibility and without wireless aid proved one of the most difficult points of the flight. The Vickers-Vimy circled about for a bit hunting for a favorable spot, and finally came down in a bog that looked like

a lovely field from above but that caught the chassis axle-deep and turned the machine over on its side, damaging one wing.

Both Captain Alcock and Lieutenant Brown were fagged enough to admit it at the end of the flight, but after getting food and sleep they went on to London, where a triumphal parade the next day celebrated their success and the bands played "Britannia Rules the Air."

But tho the glory of the first non-stop trans-Atlantic flight goes to Great Britain, it is rather pleasant that one of the men who accomplished it is an American. Lieutenant Brown enlisted in the Royal Air Force at the beginning of the war and fought thruout in the British service, but he intends soon to resume his American citizenship and his pre-war profession as an engineer here.

Captain "Jack" Alcock is an aviator, first, last and always. He began flying when he was seventeen years old—ten years ago. He has designed aeroplanes and built them, and has been instructor at Brooklands, the British aviation center outside London, since 1912. During the war he made the first bombing flight in the British expedition against Turkey. The chances are that Captain Alcock will be one of the first pilots of a regular trans-Atlantic passenger carrying plane.

## Sweden Comes to Borrow

THE placing of the Swedish Government loan is the first piece of foreign government financing consummated in the American market since the signing of the armistice, with the exception of the Belgian credit, which was not in the nature of a public bond issue. The Swedish issue comprized \$25,000,000 6 per cent bonds due in twenty years, offered at 99½. The offering was not part of a comprehensive plan for the financing of European countries, but a means to provide funds here for the payment of purchases of commodities for the account of the Swedish Government.

Government bonds on better than a 6 per cent basis have obviously a distinct appeal to the investor when

Press Illustration

Every man who served during the war in the American army or navy is entitled to wear the official service button which the United States Government is to have struck off from this design, to which the sculptor, Adolph Weinman, is putting the finishing touches. Mr. Weinman is the designer of the 1916 new dime and half-dollar and he has modeled much of the best municipal sculpture in the United States. Every precaution is to be taken against the fraudulent use of this service button. It can be obtained only from official sources and by men still in service or showing their honorable discharge papers

Some surprize has been expressed that sentiment has played so small a part in foreign government financing of the day, particularly in view of Mr. Frank A. Vanderlip's recent appeal for aid to European nations on the allied side. However, Mr. Vanderlip is an exception to the general run of financiers, a man who has never allowed his identification with a large financial institution to color his personal opinion. He is one of the few financiers who says precisely what he means and knows what he is talking about when he does. It had been expected, therefore, that the first of the Allies to be aided would be Belgium; instead, we see a neutral country, which during the war kept Germany supplied with raw material and food, given generous financial assistance,

This is one of the anomalies in the economic situation which cannot be avoided. Not only must neutrals be aided, but, in order to guarantee the payment of Germany's war indemnity, we must agree to supply her as well as Austria with food and credits until the productive ability of their people has been restored to near a pre-war basis. Sentiment and practical finance do not go hand in hand. Yet the outlook points to aid for Belgium very soon, as reports have it that an American banking house of note has recently committed itself to render aid to that country by means of a bond issue which is to be larger than any placed in the United States since the half-billion-dollar Anglo-French loan in 1915.

The Swedish loan of twenty-five millions is certainly only the beginning. For how long such loans will continue to be offered and be popular will depend upon how much encouragement is given to the proposal that we give our allies a receipt in full for the ten billion dollars already advanced by us in the shape of credits. The best thought is on the side of conservatism and pure business rather than philanthropy, particularly as Europe relies on the savings of the American people to rehabilitate her industries. The Swedish loan is only a single straw and its oversubscription may not necessarily indicate that all foreign loans will be equally successful, unless sentiment is appealed to.

compared to some of our own industrial securities, which are subject to violent fluctuations along with changes in general conditions. It is a problem how much financing of this character our markets can support with as much success as the Swedish issue. There is already talk of a loan to Switzerland, one to Greece, a credit to Czechoslovakia for the purchase of cotton, and a possible loan to Rumania, which has sought in vain to sell a quantity of its treasury notes here.

## The Baltic Imbrolio

**M**OST confused and perplexing are the reports from the belt of new states along the old Russian frontier from the Baltic to the Black Sea. This territory had been conquered by the Germans during the war and ceded to them by the treaty of Brest-Litovsk, but on the collapse of Germany it was left without legal government, ruling power or settled boundaries. If the German troops had been allowed to withdraw it would have fallen into the hands of the Bolsheviks. So the armistice stipulated that the German troops should not evacuate Russian territory except by permission of the Allies. Accordingly 70,000 German soldiers under command of General von der Goltz have remained in the Baltic provinces. Wherever the Germans have retired the Russian Bolsheviks have followed

them closely or local sympathizers have established soviets, for the newly organized national governments, with the exception of Poland, were too weak to offer adequate resistance. Besides, these Baltic states are distracted by class and racial feuds. In each of them, as a rule, the officials were Russian, the nobility and landowners were Polish or German, the business and the professions were largely in the hands of Jews, while the bulk of the population consisted of peasants and workingmen of non-Russian stock. Of these last the Esths or Esthonians are blood relations of the Finns on the other side of the gulf. The Letts and Lithuanians are closely related, but neither of them Slavic. The Poles are Slavs, but distinct from the Russians. In religion the Baltic states shade off from Protestantism in the north to Catholicism in the south, the Esthonians and Letts being mostly Lutherans and the Lithuanians

## After 465 Years

When Gutenberg bestowed upon the world the blessing or the curse (see Ecclesiastes, xii, 12) of printing with movable types, he used a press built on the plan of a wine-press. With it he did the most beautiful printing the world has ever seen; but he could accomplish little in the way of speed. Gutenberg could perhaps print a few dozen sheets an hour. The Gutenberg of today has at his disposal a press which prints and folds 300,000 eight page papers in an hour. The paper goes thru the press at a speed of 14 miles an hour. One hundred and eight miles of paper six feet wide are used each hour, weighing about 12 tons. The giant press, which is 12 feet long and 20

feet wide, prints not only in black but in colors. It produces 50,000 twenty-four page papers an hour, with the two outside pages printed in three colors and black. This press, which we illustrate with part of the framework broken away so that the progress of the paper may be easily seen, is called a double octuple press. It is made up of two exactly similar sections each of which delivers its quota of completed papers from opposite ends to the middle. Each section prints on both sides of four rolls of paper, which travel thru the press at the rate of fourteen miles an hour. When printed, the papers are folded and counted, ready for the newsboy. It is marvelous, but Gutenberg would probably have preferred his old screw press. But Gutenberg had the soul of an artist

MINOR WARS IN THE BALTIC ZONE

Independent national governments have been formed in Finland, Estonia, Lettonia (Latvia), Lithuania, Poland and Ukraine, but their boundaries are undefined and in dispute. All six states are carrying on warfare against the Bolsheviks of Great Russia and their own lands, but mostly without co-operation and often in conflict among themselves. These forces, reinforced by Allied troops from the Arctic and the British fleet, are converging upon Petrograd, which they hope soon to capture. The Bolsheviks have so far warded off the naval attack by mines in the Gulf of Finland and sorties of their fleet. The German army of occupation has not yet been withdrawn and acting with them is a "Baltic" volunteer force composed of the German natives

and Poles mostly Catholic. The seaports, like Riga, Danzig and Reval, are old German towns of the Hanseatic League. The poorer classes, having suffered for centuries from their German and Polish overlords, revolted in 1905 and were put down with great severity. They seized the opportunity of 1917 to get revenge and the most reliable troops that Lenin has had have been Letts.

With these various factions involved and with passions at white heat the turmoil is impossible to untangle. In April the Poles took Vilna, the Lithuanian capital, and while they were killing Jews and Lithuanians inside the city the Bolsheviks were bombarding the city from the outside and the Lithuanians were fighting the Bolsheviks. The Estonians who went to the assistance of the Letts against the Bolsheviks were attacked by the Germans. Riga was wrested from the Bolsheviks by the Germans, who executed a hundred of the Soviet leaders. While the Lett troops were on the eastern frontier fighting the Bolsheviks, Libau, the Lettonian port and capital, was seized by a "Baltic" army with the aid of the Germans. The 8000 Finnish troops who are aiding the Estonians to capture Petrograd from the Bolsheviks are largely composed of the Finns who volunteered for service in the German army against the Czar.

The Baltic Sea is patrolled by the British fleet, and

British troops, by permission of the Council of Four, have taken possession of Oesel Island at the mouth of the Gulf of Riga. The Soviet fleet has several times sailed forth from its base at Kronstadt and encountered the British in the Gulf of Finland. In one of these engagements the British reported that one of the Bolshevik battleships had been run aground and fired. In another the Bolsheviks reported that a British submarine had been sunk. This part of the Soviet report was not allowed by the British censor to come to America, but was later acknowledged by the British Admiralty to be correct.

The region north of Petrograd is inhabited largely by Karelians, a people of Finnish stock and desirous of joining Finland. On the night of April 20 a Finnish army crossed the frontier and bombarded the town of Olonets. This was easily taken and with it 600 Bolsheviks. The Olonets district lies between Lake Onega and Lake Ladoga and so gives an opportunity to advance southward on Petrograd and to connect with the Allied forces in the north. In coöperation with this movement General Maynard, commanding the British and American expeditions from the Arctic, has moved his headquarters from Murmansk to Kem, 400 miles south, on the Karelian coast of the White Sea. A mosquito fleet has been launched upon Lake Onega composed of American motor launches brought on flat cars from the Arctic Ocean, and seaplanes are also used in raking the Bolshevik craft on the lake with machine guns. The Allies and America have recognized the independence of Finland, but Admiral Kolchak refuses to agree with this. Apparently Finland has been promised the Karelian territory she claims. At any rate she is taking possession of it by troops trained and armed by the Allies. The Finnish Government has ordered large quantities of munitions from America for the campaign in Russia, including 5000 machine guns, 150,000 automatic pistols and 5000 tons of ammunition.

General Mannerheim, the Finnish Premier and Commander in Chief, is despatching troops against Petrograd from three directions. One expedition aims to go thru the Olonets region and around Lake Ladoga. The second will attack the Russian frontier between Lake Ladoga and the Gulf of Finland. The third is advancing between the Gulf of Finland and Lake Peipus.

The Olonets expedition is under the Russian General Yudenich and is largely composed of Russian volunteers who have fled from Bolshevism. After taking Olonets they were driven out again by the Bolsheviks, but recovered the ground when British reinforcements arrived from the north.

Soviet forces southwest of Petrograd are being attacked by troops of Finns, Esths, Letts, Lithuanians and Baltic Germans, supported by the British navy. Some contingents convoyed by the British along the southern coast of the Gulf of Finland were able to outflank the Bolsheviks and come within thirty-five miles of Petrograd and even to get within gunshot of the Russian naval base of Kronstadt. They were driven back from these advanced positions but hold Pskov and both shores of Lake Peipus. Both the Esths and the Finns have several times claimed the capture of Petrograd, but that city still holds out, altho hard pressed for lack of food. The defeat of Kolchak in the east has enabled the Soviet Government to bring some of its forces from the Siberian front to the defense of Petrograd. Zinoviev, the Bolshevik Governor of Petrograd, has been more successful than was expected in rallying the moderates to his side and getting the Soviet army and navy into fighting form.

The boundaries of the Baltic states have not yet been drawn and since the historic claims overlap, each is

## Howls from the Vanquished

Germany, especially Berlin, has held frequent mass meetings of protest since the terms of the peace treaty became public. The group above are foreign born Germans who paraded in Berlin to air their grievances against the terms of peace—English, Russians, Egyptians, Belgians, Italians and Austrians are represented. "We protest against peace by force and the theft of our private property," reads one of the signs

BERLIN OPINION ON ALSACE

The disposition of Alsace is one of the most vigorously protested clauses. This sign carried at the mass meeting reads: "In 1648-1684 Louis XIV stole German Alsace; in 1919 Clemenceau steals it"

Chancellor Scheideman was the chief speaker at this Berlin mass meeting called forth by the peace terms. His arguments—such as "we have no quarrel with the German people"—were frequently quotations from President Wilson's former speech, proving again perhaps that the devil can quote scripture to his purpose. "Only the fourteen points" is the slogan on the speakers' stand

Marcus in New York Times

Ba, ba, black sheep says she has no wool

trying to get into possession of the territory it desires. Lithuanian immigrants in America, who number almost a million, are holding public meetings of protest against the Poles for invading Lithuanian territory and committing horrible atrocities on the population. After their capture of Vilna the Polish troops slaughtered Jews and Lithuanians and pillaged their houses. The Jewish investigating committee reports the killed and wounded as 1200 and the damage to property as \$12,000,000. The Polish authorities claim the reports are exaggerated and that the people punished were Bolsheviks.

## The Reply to the Germans

THE German delegation at Versailles asked for the opportunity of oral discussion of the peace terms presented to them on May 7, and, this being refused, they delivered every few days notes on various details, and finally, on May 29, a general reply and counter-proposals. This is a document of 60,000 words, that is, two-thirds the length of the treaty. We publish on the next page the main points of the German protest in parallel column with the reply of the Allied and Associated Powers. This reply, said to have been drafted by Philip Kerr, secretary to Premier Lloyd George, begins with a sharply worded arraignment of Germany as the author of the war and responsible for its atrocities. We quote a few paragraphs:

In the view of the Allied and Associated Powers the war which began on the 1st of August, 1914, was the greatest crime against humanity and the freedom of the peoples that any nation calling itself civilized has ever consciously committed. For many years the rulers of Germany, true to the Prussian tradition, strove for a position of dominance in Europe. They were not satisfied with that growing prosperity and influence to which Germany was entitled, and which all other nations were willing to accord her, or the society of free and equal position.

They developed a system of espionage and intrigue thru which they were enabled to stir up international rebellion and unrest, and even to make secret offensive preparations within the territory of their neighbors, whereby they might, when the moment came, strike them down with greater certainty and ease. They kept Europe in a ferment by threats of violence, and when they found that their neighbors were resolved to resist their arrogant will they determined to assert their predominance in Europe by force.

As soon as their preparations were complete, they encouraged a subservient ally to declare war on Serbia at forty-eight hours' notice, a war involving the control of the Balkans, which they knew could not be localized and which

Holland in Reynolds' Newspaper, London

He weeps, "Oh, this is too, too cruel! To make me take my gruel!"

was bound to unchain a general war. In order to make doubly sure, they refused every attempt at conciliation and conference until it was too late and the world war was inevitable for which they had plotted and for which alone among the nations they were adequately equipped and prepared.

Germany's responsibility, however, is not confined to having planned and started the war. She is no less responsible for the savage and inhuman manner in which it was conducted. Tho Germany was herself a guarantor of Belgium, the rulers of Germany violated their solemn promise to respect the neutrality of this unoffending people.

They were the first to use poisonous gas, notwithstanding the appalling suffering it entailed. They began the bombing and long distance shelling of towns for no military object, but solely for the purpose of reducing the morale of their opponents by striking at their women and children. They commenced the submarine campaign, with its piratical challenge to international law and its destruction of great numbers of innocent passengers and sailors in mid-ocean, far from succor, at the mercy of the winds and waves, and the yet more ruthless submarine crews.

They drove thousands of men and women and children with brutal savagery into slavery in foreign lands. They allowed barbarities to be practised against their prisoners of war from which the most uncivilized people would have recoiled.

The conduct of Germany is almost unexampled in human history. The terrible responsibility which lies at her doors can be seen in the fact that not less than 7,000,000 dead lie buried in Europe, while more than 20,000,000 others carry upon them the evidence of wounds and suffering, because Germany saw fit to gratify her lust for tyranny by a resort to war.

With this letter was delivered a copy of the treaty volume, with numerous minor alterations and corrections interlined in red ink, also certain appended documents and explanations modifying in many respects the original draft.

The terms presented to the Germans called for compliance within five days, otherwise the armistice would be over and hostilities might begin immediately without further warning. At the request of the Germans the time limit was extended by two days, till June 23, at five o'clock in the morning.

As the German delegation were leaving Versailles a French crowd gathered, jeering and throwing stones. Dr. Melchoir, one of the plenipotentiaries, and Frau Dorlblash, one of the secretaries, were wounded on the head by the stones. Premier Clemenceau sent a letter of apology for this "reprehensible act" and dismissed the police commissioners for having made no effort to restrain the mob.

# German Protests and the Allies' Reply

## What Germany Asked For

**Fourteen Points** Germany surrendered on the express agreement that the peace terms should be in accordance with the principles specified by President Wilson. But the Allies have departed from this agreement and even refused the right of discussion.

**Economic Life** The draft treaty involves the utter destruction of German economic life and reduces the people to a financial slavery unknown in history.

**Self-Determination** Two million and a half Germans are to be torn away from their native land against their will. Germany asks for plebiscites in all the territories proposed to be alienated. Germany is deprived of land, goods, ships, cables and raw materials and then loaded with unbearable burdens.

**The League** Germany is excluded from the League of Nations.

**Alsace-Lorraine** Germany in 1871 committed an injustice in annexing Alsace-Lorraine without a referendum, but it would be a greater injustice now for France to annex the provinces with their increased value without consulting inhabitants. If France takes the territory she should assume proportionate part of German debt.

**Territorial Matters** Upper Silesia has had no connection with Polish empire since 1163 and majority of inhabitants prefer German rule. Danzig and Memel are purely German towns. West Prussia contains majority of Germans. More of Schleswig is offered to Denmark than Denmark wants. Inhabitants of Moresnet, Eupen and Malmedy are mostly Germans and should not be bartered to Belgium.

**The Sarre** The coal needed to replace French losses could be supplied without forcing the Germans of Sarre district under foreign sovereignty. The Sarre coal is hundred times the French demands.

**Colonies** Germany has administered her colonies well and should not be totally deprived of them, at least without compensation for expenditures. Germany asks for impartial arbitration; would administer colonies under League of Nations.

**Reparation** Germany agrees to pay for all damages to civilians of Belgium and France. Asks for coöperation with Reparation Commission. Will pay \$5,000,000,000 by 1926 and annual installments thereafter to a total of \$25,000,000,000.

**Inland Transportation** Germany unwilling to put internal waterways and railroads under foreign control. Kiel Canal should be treated like other straits under international commission.

**Trade** Germany asks equality of trade conditions for all nations and the adoption by the League of measures preventing economic warfare and boycotts.

**Disarmament** Germany agrees to disarmament and abolition of conscription, but asks for longer time before reducing army to 100,000 limit.

## What the Council Replied

**Fourteen Points** Is a peace of right and justice on the terms agreed and on the principle of freeing oppressed peoples and redrawing national boundaries, as far as possible in accordance with the popular will, while giving to each the facilities of living an independent national and economic life.

**Economic Life** Germany's economic condition is in no wise crippled by devastation like that brought upon the Allied peoples. Reparations Commission will not interfere with Germany's internal life.

**Self-Determination** Every territorial settlement has been reached after careful consideration of racial, religious and linguistic factors, and legitimate hopes of peoples long under alien rule. Wherever the will of the people is in doubt a plebiscite is provided for.

**The League** Hope it may be possible, at an early date, to admit Germany to the League.

**Alsace-Lorraine** A plebiscite for Alsace-Lorraine cannot be admitted because the whole purpose is to repair the injustice of 1871. The inhabitants have never ceased to protest against German rule. It is intended that France should recover the provinces without prejudice, therefore they cannot bear any part of the German debt.

**Territorial Matters** A plebiscite will be allowed in Upper Silesia. The third or southern zone of Schleswig will be withdrawn from the plebiscite. The other districts were taken from Belgium in 1814 without regard to the people, who have remained attached to Belgium. Danzig is restored to its ancient status of a free city. Boundaries of West Prussia will be modified.

**The Sarre** No alteration is permissible in the Sarre terms. The form of reparation will be a definite and visible symbol. Interests of inhabitants safeguarded. Transfer not to France, but to League.

**Colonies** No concession on colonies. Allies cannot "again abandon 13,000,000 persons to a fate from which the war has delivered them." Germany got but one-half per cent of her imports or exports from her colonies.

**Reparation** Damages demanded are clearly justifiable under armistice terms. Germany is accorded privilege of surveying devastated region and of presenting her estimates within four months. If agreement can be reached the sum will be fixed.

**Inland Transportation** International control necessary to give inland states free access to the sea according to the agreed basis. Some modifications are made; Kiel Commission is abolished.

**Trade** If Germany abandons those aggressive and exclusive traditions in business and politics, Germany shall have fair treatment.

**Disarmament** The German army will be reduced to 200,000 in three months and to 100,000 by March 31, 1920.

# The People and the President

An Editorial

By Hamilton Holt

**N**O nation has been blessed by such an illustrious line of chief magistrates as the United States. All our Presidents have been good men. Most of them have been great men. Some have been political geniuses. Yet every President from Washington down has had a majority of the American people arrayed against him at some period of his term of office.

During the interval between the election and inauguration of our Presidents partizan rancor has time to subside. Each incumbent enters office with the good will of the whole nation. But generally at the end of the first year a tiny cloud appears on the horizon. By the end of the second year the whole sky is overcast. By the end of the third year the storm is raging. The President then seems to be the most execrated man in the land.

Take our last four Presidents, for instance. How we reviled McKinley. "Spineless jellyfish!" we shrieked. "He waits till public opinion is formed before acting. Oh, for a leader!" And then when we got Roosevelt we shouted, "Give us a rest! Stop leading us hither and yon." Next came Mr. Taft. "Quit gallivanting around the country," we wailed. "Cut out the Methodist socials. You waste half your time seeing unnecessary people." And then when we elected Wilson we growled, "Why do you go in your closet and lock the door? You won't let us talk to you at all." Whatever qualities a President has, we demand the opposite. We are a queer people.

It looked for a time as tho Wilson might escape the fate of his predecessors and be the one American President to retain his popularity to the end. But it was not to be. The first rumblings were heard when he called upon the country to vote the Democratic ticket at the last election. Even if this was good advice, he should not have given it. He should have left that to his friends. He had been the real spokesman of the united nation during the war and the people resented his descending to the lower plane of partizan leadership. That doubtless lost him a Democratic majority in Congress. He next picked out—not a bi-partizan Peace Commission of the ablest statesmen, labor leaders, economists and financiers—but a Commission composed of comparatively unknown men and did not even seek to have the Senate confirm them. He then broke a hundred years' precedent and went to Europe. The verdict of history will in all probability record this as his greatest act of statesmanship. Yet it caused intense resentment in all the little minds who hate innovations and whose vision looks backward to the days of Washington and Jefferson.

**S**O the political sky at home had begun to cloud over when the President left for Europe. But there he was everywhere received with universal acclaim. But when I arrived in Paris a few weeks later I found the enthusiasm had subsided and a campaign of vilification against him had already begun in the French press. I read with astonishment the cables sent over from America reporting each trivial and derogatory thing said against him by every celebrity, notoriety and nonentity in America. It was evidently a propaganda of the most sinister character for which somebody other than the newspapers was paying the bills. Everywhere men asked me if it were true that American sentiment did not support the President. All the reactionaries at the Conference were in high glee, for manifestly if the President was to be

repudiated at home there was no need of paying attention to his advice abroad.

Such was the situation during my three months over there. I had hardly landed at the dock on my return home when I perceived that the attitude of the American people toward the President had undergone a marked change since he had been in Paris. At first I supposed it might be only a local matter confined to New York City and the Atlantic seaboard, but I have since traveled thru New England and as far west as Nebraska, and I find the President's prestige is at its nadir everywhere. And synchronously with the waning and decline of Mr. Wilson one perceives the waxing and "coming back" of Mr. Taft, the man who was the most unmercifully defeated candidate for the Presidency in American history.

**W**HETHER President Wilson's eclipse is temporary or not time alone can tell. I rather expect him to regain popularity after he returns to Washington and takes the helm again, especially if he decides to tour the nation in the interests of the ratification of the Covenant and the Peace Treaty.

But what I cannot understand is how the American people can forget his supreme leadership during the war, and the great achievements he is now accomplishing at the peace table. Let me mention but three instances:

First, he—one man—focused the heterogeneous and diverse aims of the war into the one ideal of pure Americanism, which is democracy. The Allied peoples with one accord followed the banner he unfurled.

Second, he first enunciated the aims for which the war was being fought. Samuel Gompers told me that had he not done this there would have been revolutions in both England and France early in 1918 just before the big German drive began. By his fourteen points peace was eventually concluded. Some have said the Allies should not have stopped fighting until the peace was dictated by the sword at Berlin. That undoubtedly might have been done. But all the generals I met in France, from Mangin, Bliss and Bullard down, told me that Germany is completely beaten in a military sense. Thus we could have got no better peace in Berlin than at Versailles, and we have saved probably half a million lives by securing the early surrender of Germany thru negotiations.

Third, he is now on as great a quest as was ever undertaken by an American—a quest, that if successful, will substitute coöperation for competition in the international realm by establishing a League of Free Nations to promote peace and justice on earth.

I cannot deny that Mr. Wilson asked the people to vote the Democratic ticket. I agree that he has not sufficiently conciliated the prejudices and jealousies of the Senate. I am aware that he likes to be the only star in the cast. I grant that he has taken over the railroads, telegraphs and telephones when some people did not want him to, and proposes to give them back when others do not want him to. I know that he consults Samuel Gompers more frequently than J. P. Morgan. But what do these and all the other objections amount to as compared with the three acts of transcendent statesmanship I have enumerated above?

If we could put him out of office the way the English

and French can retire Lloyd George or Clemenceau by simply getting an adverse vote in Parliament, that would be one thing. But the President of the United States cannot be retired except on impeachment proceedings.

Woodrow Wilson is our spokesman before the world and will remain our spokesman during the present peace negotiations whether we like it or not. Altho we may not agree with this or that compromise he has been forced to take, he is the only statesman in Paris who represents a nation which is 100 per cent disinterested.

Why not support the man who has thrown the whole weight of his great prestige into the scales to help save the world, even at the expense of his personal popularity at home and abroad? Such a man deserves the most ungrudging loyalty from the American people.

We ought to be ashamed of ourselves to let the forthcoming Presidential election blind us to the great work he has done and is doing for this and future generations, when the only effect is to hamper every effort he is making at the Peace Conference in behalf of ourselves and the world.

# Grandfather's Hat

An Editorial

By Edwin E. Slosson

**T**HE Canadian House of Commons has recommended the abolition of hereditary titles as not in accord with democratic usage. Australia feels the same way about it, as may be seen from the *Sydney Bulletin*:

The original knight was a warrior or nothing. The modern knight is an elderly gentleman who will sentence you to a term of penal servitude, or sell you a packet of tea, or charge you a big fee for scribbling a prescription; but it is not his line to risk his skin either in joust or in battle. The Great War produced thousands of truly knightly figures who gladly offered themselves in the cause for which such idealists have always fought—the righting of great wrongs and the defense of the weak. Many are dead: none became knights. A duke used to be a dux, or leader, in the true sense of the term. The average modern duke is a confirmed follower, both politically and in the field of battle. Practically every step in the peerage is a question of cash paid to the party treasury, and no bones made about it. Thus, when Sir Frederick Milner complained in the *Times* in 1917 that a certain peerage had been bought from the Liberals for £120,000, the peer corrected him with the information that the honor had cost only £100,000.

The fact—or rather public knowledge of the fact—that British titles and hereditary positions in the Upper House are commonly bought, not earned, has diminished their prestige at home and abroad. The platform of the Manchester Liberals demands the abolition of all hereditary titles. The dominions do not grant titles and the oversea British do not always feel honored when one of their number accepts—or works hard for—such honors, since sometimes the man selected by the Mother Country for distinction is not regarded by his neighbors as their most distinguished citizen. They feel like the Russian general on whose troops the French Government had bestowed a certain number of war crosses. The soldiers called from the ranks had been duly decorated and kissed by the French commissioner, but after the ceremony the Russian commander ventured to remark that he thought the effect would have been better if a more careful selection had been made. The astonished French officer replied that the names had been procured by him from the Russian staff. But on investigation it was found that by some mistake there had been given him a list of men needing vaccination instead of those distinguished for bravery.

All titles originally meant something. Even the Master of the Horse or the Steward of the Chiltern Hundreds had certain duties to perform. But in the course of time the title tends to be meaningless and the honor gets disengaged from the obligation. When Hindenburg wrested East Prussia from the Russians the University of Königsberg, carried away by gratitude at its rescue,

bestowed upon him all its doctorates in a bunch. Doubtless Hindenburg, by reversing the German defeat at Tannenberg five hundred years before, proved himself to be a great general, altho the Germans themselves do not seem so sure about that as they did in the days when they were pounding nails into his wooden image. He may then have deserved the degree of M.D. meaning Magnus Dux, but not if it meant Medicinæ Doctor, and there is no reason to believe that he thereby became qualified as a teacher of law, philosophy or theology, even German theology. But only universities guiltless of this offense are entitled to cast stones at Königsberg. It is not unknown here for a man, innocent of law tho perhaps skilled in its evasion, to get an LL.D. in exchange for a \$100,000 gymnasium.

A title conferred upon an individual usually means that he possesses some sort of distinction tho perhaps not the sort implied by the name. But when the title is hereditary even this significance may be lost. Grandfather's hat or coronet is likely to be both old-fashioned and a misfit. The bloody bully who was struck on the shoulder by the king's sword on the battlefield and dubbed knight for his valor, may have as his modern representative a pacifist and philatelist. The courtier who got his title by pandering to his sovereign's passions may bequeath it to the patron of the Y. M. C. A.

**B**UT while the transmission of a mere title is an empty and undeserved honor, we cannot so easily dismiss the idea of hereditary office. The founder of a noble family in most cases must have had exceptional ability of a certain kind, presumably ability in the management of men. The intermarriage of such families would naturally produce a strain somewhat above the average. If to this be added a well developed sense of *noblesse oblige* and special training for their position in life, we get a class that has certain undeniable advantages in public service. Such a class persists and comes to the front even in democratic England and republican France, where it has lost the monopoly of privileged status. In imperial Germany, where hereditary caste was still entrenched, the various princes and vons proved by no means so inefficient as we should have expected and have liked them to be. Tho they owed their positions as generals or administrators solely to their birth, some of them unfortunately knew their business. It sometimes happened, and possibly within the last six months, that one of our catch-as-catch-can diplomatists has found himself wound around the finger by a scion of European aristocracy who was in the service by mere birthright but who therefore had been inducted into the game and

the languages from birth instead of having to pick up these preliminaries after he reached his post.

In fact we might venture to say that if future office holders were nominated in the cradle by a competent eugenicist, selecting them say from such families as the Adamases, Harrisons, Lowells and Lees, and then they were educated and disciplined for their life work, we would get a body of public servants quite as competent on the whole as those who are selected or elected because of their prominence in party politics. Of course such a class should never form a legislative assembly like the House of Lords, for they would not be representative men. But as administrative officials they would be very serviceable.

The practical difficulty in the way of such a system is that the man who is born to position comes to regard it as a sinecure, not as a job. He regards it as coming to him for what he is, not for what he can do. Possibly this is a fatal defect, but if so it is a pity. For modern experimental pedagogy has proved the supreme importance of two things, inherited ability and special training. Which is of the greater importance is still in dispute, but nothing else compares with them. In our present method of procuring public servants we are making no use of the first and very little of the second. It would be very unfortunate if democracy cannot find a way of making use of both of them with safety to itself.

## Editorially Speaking

The bourgeoisie of Berlin have declared for a strike of citizens. It is about time for the worm to turn in every country.

\*\*\*

Some cynical stay-at-homes have complained that the returned soldiers have "got the big head," but the London hatters find it literally true. The sizes most in demand before the war were  $6\frac{1}{2}$  and  $6\frac{5}{8}$ , but now they sell more hats of 7 to  $7\frac{1}{8}$ .

\*\*\*

The number of limbs lost in American industry every year is 26,000. This is six times the number of amputations among American soldiers in the year of war. As soon as we have made peace in Europe can't we do something to prevent the wounding of workmen at home?

\*\*\*

Now that the draft of the Treaty of Versailles has been unearthed and buried in the *Congressional Record*, will not the Senate committee inquire of Mr. Root if he happens also to have a copy of the Treaty of London in his pocket? We would all like to know just what it really did say about Fiume and the Pope and other things that we have been discussing so hotly.

\*\*\*

The meaning of a disputed term can best be ascertained by reference to the author of it. Talleyrand, who invented "non-intervention," was asked at a dinner party by a lady to explain just what it meant, and replied: "Madame, non-intervention is a diplomatic formula, which signifies exactly the same thing as intervention." This explains completely the policy of non-intervention in Russia and Mexico.

\*\*\*

We note with satisfaction the report that the Senate is likely soon to ratify the treaty with Colombia by which the United States pays Colombia \$25,000,000 in settlement of her claims growing out of the separation of Panama from the Colombian republic. Whether Mr. Roosevelt "took the Isthmus" rightly or wrongly is a matter about which historians will probably always differ. But there can be no question that the United States prevented Colombia from regaining or trying to regain her lost territory, and therefore to that extent has made itself liable to a presumed claim for damages. Colombia has repeatedly tried to have her claims adjusted by arbitration, but we have always turned a deaf ear to every such proposal. Our refusal to lay our case before an impartial tribunal has done much to make us unpopular in Latin-America. Mr. Taft was willing to pay Colombia a quitclaim of \$25,000,000, but he was unable to carry Congress with him. Mr. Wilson made a similar attempt, but the matter has been held up be-

cause his treaty began with an apology. It is now understood the apology clause will be eliminated, as it ought to be, and the treaty will have plain sailing in the Senate. The United States can well afford to be generous in her dealings with foreign nations, and especially with those of this continent. There should be no further delay in satisfying the claims of Colombia both for her sake and ours.

\*\*\*

A shift of 900 votes in a population of a million would have brought New Zealand into the prohibition column. This is the second referendum in which prohibition has missed by a narrow margin, and on the third time trying New Zealand will doubtless go over the top.

\*\*\*

In all this warlike world there seems no refuge for the poor pacifist. Twenty years ago a Quaker-like sect of Russian protestants, the Doukhobors, emigrated to Canada to escape conscription in the Czar's army. Tolstoi wrote his greatest novel, "Resurrection," in order to raise money for their migration, and they received aid from numerous charitable persons in England and America. The Canadian Government, knowing of their peculiar faith, their pacifist principles and their communal life, extended a hearty welcome and promised them perpetual exemption from military service. They first took up land in Saskatchewan, but as the country settled up their neighbors decided that their room was better than their company, so the Doukhobors were moved on west into British Columbia. Here they have brought under cultivation 400,000 acres of wild land, much of it timbered, and their numbers have increased from 8000 to 14,000. Nearly half of them, therefore, are Canadian-born and know nothing of Russia except by hearsay. When the war broke out and conscription was adopted they of course refused to serve, but consented to make jam for the army, apparently in the hope of sweetening hostilities. Now they are to be expelled from their farms in British Columbia to give place to returned soldiers. Since among their other crazy notions they believe it is as wrong to go to law as to fight, they seem helpless to prevent either personal violence or official oppression. Only one weapon they have, passive resistance and appeal to compassion. They threaten—or propose—to march into the cities in a body, men, women and children, and walk naked thru the streets until their homes are given back to them or they perish from starvation and cold. This hunger strike in the open seems likely to be as effective as it has proved in prison, and kindhearted Canadians are making vigorous protest against the action of the Government in dispossessing them of the lands they have paid for and worked for.

# Rainsboro Spruces Up

## A Story of the Home Town When the Boys Come Back

By Hugh S. Fullerton

**R**AINSBORO was a-flutter with flags and bunting. The boys were coming home from Over There. Thirty-four of them were to arrive on the morning train from Camp Custer. Three never would return and two others were not with their comrades because they were in the hospital.

Main street was filled with the wagons, carriages and automobiles of the farmers, for of the thirty-four who were returning nine were boys from the farms. The train appeared around the brow of the hill, the engineer announcing his approach with the precious freight by a long-drawn screech of the whistle. Car windows were thrown open and khaki-clad arms and shoulders appeared, hats waved, the boys shouted and cheered. The crowd surged toward the station, mothers and sisters wept with joy as they clung in close embrace to sons and brothers, while fathers gripped strong young hands fiercely and strove to conceal their pride.

Presently the boys, very soldierly and erect, formed for the march. Their old lieutenant, home now for months, rejoined them to march again in spite of the one missing arm. At the court house a banquet was spread and pretty girls strove to outdo each other in waiting upon the returned ones. The day was a succession of joyful reunions, excitement and exaggerated repetition by fond relations of the heroic deeds of the boys. It was midnight before Rainsboro subsided.

For the next two weeks Rainsboro experienced thrills. There were receptions at the churches, the City Council gave a dinner at which the Mayor and others made speeches of welcome and poured oratorical thanks upon the heroes. One by one the boys discarded their uniforms. There were three weddings, which added to the social excitement. Bill Kibler resumed charge of his hardware store, Benny Walker returned to his father's law office, Lew Horstman went back to his job as foreman at the newspaper office and Ben Brown, with his Croix de Guerre, got weary of showing it to admiring friends, telling the story of how it was won, and took charge of his father's grain elevator. Seven of the farm boys returned to the home places and appeared in town in overalls instead of khaki. Tom Hughes and Bert Norwood announced that they intended to go to Chicago and Jimmy Smith declared that there was no chance for him in Rainsboro and that he was going to try New York.

Every evening after dinner a group of the returned soldiers gathered on the bench in front of John Link's store surrounded by admirers, especially small boys, and told tales of the camp and battlefield. Day by day a vague note of discontent crept into their words and their manners. They began to curse Rainsboro and to become cynical. The circle of admirers dwindled grad-

Hugh S. Fullerton is known as the man who put baseball into print most successfully. If he weren't famous for that he would be for his stories of the home town

ually and fewer persons asked Ben Brown to show his Croix de Guerre. The small brothers still borrowed the steel helmets to wear proudly.

During this period Uncle Bob Harwood remained aloof—the only person in Rainsboro who had not seen the Croix de Guerre, the only one who had not asked one of the boys questions, the only one who had remained away from the welcome home dinners. Uncle Bob was a veteran of the Civil War, and it was alleged that he was jealous of the attentions paid to the younger heroes. There was even some indignation expressed because of the attitude he had assumed.

For thirty years Uncle Bob had been the village oracle. He had lost two fortunes, one at farming, another at trying to

raise short horn cattle, but he could sit in Link's store and outline with entire scientific satisfaction how a farm should be conducted and how short horn cattle should be raised. He was reputed to be the only person in Rainsboro who ever had read all the congressional reports and speeches. He was the first man in Rainsboro to dare predict dollar wheat. He could talk for hours upon any question of governmental policy. He astounded Charlie Scott, the lawyer, with his intimate knowledge of international law. He was reputed to have won every argument on theology he ever had with Mr. Cowden, the minister. Professor Sams, the superintendent of the schools, grew wrathful when Bob corrected him in matters of etymology. The world of science, letters, agriculture and politics was stored in his mind, but he could not mend his broken front gate without assistance. He was the adviser and the debtor of almost every one in Rainsboro.

**I**T was Uncle Bob who started Rainsboro toward reconstruction. That was three weeks after the homecoming celebration. Col. Tatum, the banker, Dr. Evans, Ned Burton and Uncle Bob were sitting in Burton's store. For once Uncle Bob took no part in the discussion. Perhaps it was because he remembered the overdue note in Col. Tatum's bank, but more probably because he was thinking.

Col. Tatum was talking. "I tell you, boys," he said, "the situation is dangerous. The spirit of the returning soldiers is bad. They got filled up with Bolshevik ideas in Europe. They won't settle down to civil life. It would not require much to start trouble among men in their mood."

"That is true," said Dr. Evans. "Look at our own boys. We have showered honors on them, but they sit around, cursing the town and criticizing all the time. The war has made them restless. They have become coarser and more violent."

Uncle Bob arose and stood still a moment. The others

waited, expecting one of his orations. Instead he said: "When are you going to give those boys jobs?"

Then he walked out. Down the street five of the boys were sitting on the bench at Link's store. Only a few small boys hung around them. They were not talking of the war and the boys lost interest. Uncle Bob started to pass, hesitated, stopped and asked suddenly: "When are you heroes going to work?"

"Heroes, hell!" said Joe Patton. "They are so glad to see us that they spill doughnuts and chicken salad all over the town, but when we want a job they remember that before the war we took a drink or robbed a hen roost. The girls swarm all over us and tell us how great we were, but two weeks later they remember that we used to work in the foundry and can't travel in their society. I'm off this burg."

There were more extemporaneous remarks along the same line of thought and after an hour of listening Uncle Bob went home, thinking. He was the first caller at the Mayor's office the next morning.

"Hiram," he said, "I didn't do my bit during the war. I want to do it now. I want you to appoint me reconstruction agent for this town."

"I will have to consult—" began the Mayor.

"Consult nothing," interrupted Uncle Bob. "There is no salary. All I want is the title and the right to tell you folks what you've got to do to make business good and give the boys jobs."

"In that case—"

"In that case I get the job. Thanks. I'll start to work tonight and the first thing I want you to do is to announce that you have appointed me and call a meeting of every business man in town for tomorrow evening."

The Mayor, rather dazed by the suddenness of the onslaught, blinked and agreed. The curiosity of Rainsboro was sufficiently aroused by the call for the meeting, and every business man attended excepting Major Ben Thompson, who once had followed Uncle Bob's advice and held his wheat for higher prices and had never forgiven. There was considerable merriment over the fact that Uncle Bob, having failed in every line of business he ever had attempted, should be chosen to direct the affairs of the town, yet there was applause when he arose to address the meeting.

"GENTLEMEN," he said, "His Honor, the Mayor, has appointed me to straighten out business conditions, which, we all know, are bad. Having spent nearly seventy years tending to other people's business and letting my own go to ruin, I believe I am qualified to act."

There was some laughter and applause.

"The problem really is simple," he continued. "I have figured from the tax rolls that it costs, in Rainsboro, \$325 a year to raise and educate a boy up to eighteen. We sent thirty-nine such boys to the war. We have received thirty-four of them back and three have left us. Two will return cripples. This community invested more than \$6000 each in those boys. Our net loss, calculating the two cripples as partial losses, would seem to be about \$40,000. The entire thirty-nine were gone a year and a half. They had just reached the age when they were beginning to repay what we had invested on them. Our loss on the two years, counting the average earnings of the boys, was about \$22,000. They sent back about \$2000 in allowances from their army pay and their poker winnings."

The audience was enjoying the talk, but only one or two were receiving it earnestly.

"Rainsboro's net loss on this war, in cash or its equivalent, is close to \$80,000. Taking that much actual earning power out of a country village hits every business enterprise in town. During the war we offset this loss

by thrift. We did without things. We cut down expenses in every direction. We postponed building, we spent no more than necessary for repairs, we wore old clothes, we ate less and we gave up amusements. But even this saving was offset by the increasing prices of everything. Our gains in sales of farm products were offset by increased cost of everything, and we lost much of the opportunity because thirty-nine of our best producers were away and we were short of actual workers."

"Uncle Bob is right," said Col. Tatum, the banker. "He outlines conditions as we bankers know them to exist. But has he a remedy to suggest?"

"Certainly," replied Uncle Bob. "We show losses because the boys went to war. The thing to do is to put in a stop loss order by giving them back their jobs."

THERE was an uneasy stir among the business men. "Business is dull—there are few openings—" Col. Tatum remarked.

"Business is dull because they weren't working," interrupted Uncle Bob. "It follows that business will improve when they work. You don't invest \$600 in a flivver and keep it in the barn. Yet we invest \$325 a year for eighteen years in our boys and then keep them idle. Put them to work."

"But how?"

"The way to put boys to work is to put them to work. You are calling them anarchists and Bolsheviks because they return and find their jobs gone. The fact is there is work enough in this town to keep them all busy and happy. As an example, just before the war started, Doc Johnson planned to remodel the front of his drug store, turn the upstairs into offices and put on a bay window. He thought it was patriotic not to spend money that way, so he postponed the job. Half a dozen others did the same way, so Bill Harris had to work the sawmill half time. Joe Patton owns a farm down on the creek. He owes Col. Tatum's bank \$300. Col. Tatum carried the note thru the war, and with that and some other things he figures that the bank cannot afford to hire Martin Arison to take his old job in the bank because he gets Lizzie Martin to do the same work for half the price. Martin and Lizzie want to get married and can't because he can't have the job back. I happen to know that Bill Harris owes Doc Johnson a big doctor's bill.

"The thing to do is for Doc Johnson to order that work done right away. If he has to borrow money from the bank to do it, so much the better for everybody. He will buy the lumber and materials from Bill Harris and the doctor and drug store bill will be paid. Bill Harris will be able to buy saw logs, so Joe Patton will cut the timber, haul it to the mill and get money enough to pay off that note in the bank. Col. Tatum will see business picking up and will give Martin Arison his old job back, and about a week later when Martin draws his first pay he will speak to Lizzie and ask her to make her last name her first. They'll spend his increased pay for wedding clothes and business will commence to spruce up."

"By George, I believe Uncle Bob is right!" remarked the Mayor.

"Of course I'm right, altho it is the first time I ever won an argument from you. The fact is that the situation here is as simple as all business is. Business is simply exchange of productive work for produced articles. Production doesn't depend upon business conditions, business conditions are created by production.

"It works out in every case. When the war started we were getting ready to pave Main street and didn't do it. If we do it now we supply work for a dozen men and turn loose \$20,000 in money. We have allowed Rainsboro to run down, have neg-

# The Doughboy, the Gob and the Job

By Colonel Arthur Woods

Assistant to the Secretary of War

**I**N considering the employment of soldiers and sailors it is well to take into consideration the state of mind of the returning service man. The reports we receive show that while the returning soldiers sometimes experience difficulty in readjusting themselves, yet once readjusted their economic value is greatly enhanced by the military training they have received. It is the transition period which has to be watched with care, and which furnishes the chief difficulty. The difficulty the returned service man has in adjusting himself once more to peaceful industry is, of course, natural. He has been part of a great movement; he has taken part in the greatest event that will occur in your lifetime and mine; donning his uniform he has become a part of the machine whose purpose was to crush autocracy; the moment he became part of that machine he ceased to be an individual, and became part of the great Army of Democracy. He was told what to do and did it. He was furnished with clothing and food. He was moved from one place to another without being asked whether he was willing to go. He was transported to the battlefields of Europe, and became part of scenes with which his imagination will tingle so long as he lives. He was part of the great human instrument which was thrown against the enemies of civilization, and which crushed them.

From this he returns to find himself once more on his own resources; he must carve out his destiny again according to his own initiative. The old occupations seem humdrum and the old surroundings comparatively drear. His new thoughts and new dreams have developed him in a manner that is difficult to measure.

The employer will have to take these facts into consideration and exercise patience. Once the soldier gets his feet under him his training, his experience, his new standards will make him more valuable than ever before, and the fighting blood that he has developed during his war experience will infuse new energy into the organization with which he is connected.

Already, the statistics we get show that when the man once gets settled in his job he is vastly improved. He is a better man—therefore, don't be content with taking the men back to their old positions. "Not his old job, but a better chance"—that is the sound business principle now. Every employer who follows it will

not only be helping these tried and tested human beings, but he will also be doing himself and his business a good turn and making full use of this new force in American industry.

When Secretary Baker asked me to become a special assistant to the Secretary of War to aid in getting the returned soldiers back to work, one of the first problems that confronted us in this readjustment period was a tendency in all industries to hang back—waiting for the much talked about drop in prices. That drop has not come and most financiers seem to think that it will be a long time before it does come. That being so, the wise thing is for every one to go ahead and help in getting business started by doing the necessary things that have been left undone during all the years of war. During those years it was good patriotism to save your money and buy Liberty Bonds, and to save labor and allow it to be used in direct war work.

**B**UT the old order is changing now and what was good patriotism in war times is bad now that peace has come.

We are urging state, city and county officials to push work on public buildings. Every contract which is let makes more workmen for us at the mines, in the quarries, and on the railroads, in addition to the labor requirement at the operation itself. This means more jobs for returning soldiers and sailors.

Take just two items alone: school buildings and good roads. There are millions of dollars' worth of school buildings planned and held up now because of the high cost of materials and labor. And the same with road building projects. The War Department is even going to bring back a good deal of road building equipment from the other side to be used in carrying out the extensive road building plans.

Every American citizen of course agrees that he has a very definite obligation in getting these boys who were taken out of their regular jobs, back to work. If you feel that obligation, "spruce up." Paint the house, cement the cellar, shingle the barn and fix the garage. If you don't do it your place, which has gone without repair for all these years, will soon get beyond repair; and it is also good patriotism, for thereby thousands of jobs for returning soldiers will be created.

New York

By Western Newspaper Union

Colonel Woods was Police Commissioner of New York from 1914 until December, 1917. The following February he was appointed to the Committee on Public Information for foreign propaganda and a month later was commissioned lieutenant-colonel in the Aviation Corps. He has since been made special assistant to Secretary of War Baker, to direct the re-employment of returned soldiers and sailors

# The Men Who Built the Ships

## How They Look to Each Other

Told in Interviews for The Independent

It was the Emergency Fleet Corporation, organized when the United States entered the war, to carry out the construction plans of the U. S. Shipping Board, that in eighteen months built 341 new shipyards with 1284 launching ways—more than twice as many yards as are owned by all the rest of the world together, and added to our merchant marine 619 vessels of wood and steel, a total of more than three and a half million tons. Charles A. Piez and Charles M. Schwab are the two men to whom the chief credit for this "world record in ship construction" is due. Both were called into the administration of the Emergency Fleet Corporation when the chances of its success looked dubious. Mr. Piez was appointed General Manager in December 1917 after a succession of three resignations from that position in as many months. He is an engineer, the president of the Link Belt Company and of the Electric Steel Company. Mr. Schwab was asked to come into the Emergency Fleet Corporation as Director General in April 1918. He is chairman of the board of directors of the Bethlehem Steel Corporation.

### What C. M. Thinks of Charley

**I** DID not know Mr. Piez. I had heard of him, of course. Mr. Hurley took me in to see him after the President had asked me to become Director General of the Emergency Fleet Corporation. Mr. Hurley said, "Mr. Piez, Mr. Schwab."

We shook.

I am obliged to say that before my first meeting I was rather prejudiced. I wasn't sure about him. That first meeting made a change. I liked him the first time I saw him. He looked to me like a man of the most sterling character—the kind of a man whose word and action could never be misunderstood.

It wasn't long after I got to calling him "Charley" that I began to realize that he was by all odds the most valuable man in the whole shipbuilding industry there in Washington.

Of course most of the men there thought there was going to be a clash between Mr. Piez and me. But instead of a clash I found that there wasn't any responsibility that I could put on him that he couldn't handle. Of course our temperaments were different. He is an engineer by training, and has not worked with men so closely as it has been my fortune to do; I mean working men. I enjoyed working with him, and aside from having a fine, critical mind he soon showed that he had a fine sense of humor. I remember how he laughed when he got a letter from a man seeking a position. This man gave as his own recommendation the fact that he had risen from office boy to the presidency of a corporation three different times!

Our ten months together was a period of unbroken harmony. I never worked with any man that I could work with better. The nation owes him a debt of gratitude that it will be very hard to repay.

### What Charley Thinks of C. M.

**A**S you remember, in March last year, the Germans were making a pretty heavy drive on Paris. The War Department had just made tremendous additional demands for ships which seemed to surpass any possible capacity that we might attain. We decided that we had to have some help. So Mr. Schwab was asked by the President to come in.

He came to the office and met the official family. When he shook hands I was fascinated by him at once.

We all urged him to join us. He said "I am going back to New York and think it over. I'll be back Tuesday."

On Tuesday morning he dropped in and said, "Mr. Piez, if I come in here, what are you going to do?"

"Anything you want me to do," I said. "I'll help in any way I can. Shift me where you want to."

"I don't want to shift you," he answered, "because I've talked to a number of men who know you, in New York, and they tell me I ought not to accept unless you agree to stick with me."

"Well, I don't know," I said. "I am fifty-two, and I don't know whether I can get along with you."

"I am taking the same chance you are," he answered. That illustrates Schwab's short cut to results.

I guess it was about two weeks later when he dropped in and said, "Piez, what do your friends call you?"

I said, "Charley."

He said, "Mine call me C. M."

We have been "Charley" and "C. M." ever since.

We worked together like a team that had been pulling in harness for years.

He is a unique character because of his tremendous vitality and love of fun. He is enormously energetic and has an amazing way of getting things done. But above all, I

# Where Do the People Come In?

## When Capital and Labor Fight It Out

By Elsie Gluck

**W**ISCONSIN, An Experiment in Democracy, Frederick Howe entitled one of his books some years ago. Today, Madison, the capital of that state, is undergoing an industrial crisis that may reflect the trend of the bitter struggle between capital and labor over the country, a crisis that may test our sort of democracy.

Madison has been in the throes of a strike affecting some two thousand men for seven weeks. Madison workers are striking to have the award of an impartial governmental body, the War Labor Board, carried out.

In the city of Madison sixteen plants (two of them Government owned) were doing war work. The employees felt that the principles promulgated by the War Labor Board—the right of the employers and the employees to organize, equal pay for women for equal work, the basic eight-hour day, and the “right of all workers, including common laborers, to a living wage”—had not been carried out in these plants. Early in June, 1918, they presented certain demands to nine of these plants. Their demands were not “satisfactorily met.” In the latter part of July a strike was threatened. The United States Department of Labor sent its conciliators at the request of the employers and at a meeting of the employers and the conciliators on July 31, 1918, it was decided that each employer individually was to submit his dispute to the War Labor Board on the assumption that all sixteen would sign.

The workers were meeting at the same time and had voted to strike the next morning, August 1, at ten o'clock. Word was brought to them at midnight that the employers had agreed to submit their disputes to the War Labor Board. Orders for the strike had been sent out, but they were called off at the very last moment.

That was nine months ago. The decision of the board was expected in two weeks. Wages in many cases were so low that the struggle thru the winter—Madison's cost of living is said to be second highest in the country—was hard. But the men were assured—some of them who got as low as twenty-eight cents an hour—that the award was coming and that they would get their back pay, for the award would be retroactive to August 1.

Madison is not the ordinary industrial town with its large percentage of foreigners, its dismal appearance, its revolutionary element. It is primarily a university and capital city, a lovely town of 35,000, its university buildings set high on one of the hills of the city and

its capitol on another. Just now the trees are out in spring green and the four lakes surrounding the city make it an inland city of dreams. That is over on the west side. The east side is the industrial section. A truant officer told me the other day that over in that part of the city children were staying away from school because they had not enough to eat or because their clothes were ragged.

Madison workers are not revolutionary. They are patriotic American trade unionists of the highest type—and so they waited, thru August, September, October—and then came the armistice; but still no award.

The award was granted on February 18, 1919, six and one-half months after the submission of the case. If ever the country establishes a permanent federal arbitration board, delays which cause such suffering and misunderstanding must be impossible.

When it came, the workers felt somewhat rewarded for that long wait. Every one of their demands—the forty cent minimum for adult workers, a basic nine-hour day, the right of collective bargaining, the abolition of discrimination against trade union members—was granted.

Again the workers waited. Many of them had hundreds of dollars coming on back pay according to the terms of the award; many of them had been driven by necessity to go into debt at the grocer's and the butcher's.

The employers had until April 1 to put the award into effect. The workers waited—waited in February and waited in March, and had no indication of what the employers would do.

The employers had until April 1 to put the award into effect, but they also had thirty days within which to appeal the case.

They, too, waited—until the time of expiration for appeal was almost due—and then appealed without any notice to their men.

On March 31 the workers voted to call a strike the following day at ten o'clock. They had waited eight months. On the following day—and only then—they were informed that six of the employers had appealed their cases.

The situation was tense. The workers of Madison are very well organized. In some of the plants they are 85 per cent organized, in others 98 per cent. The war was over and production was on the decrease. The workers had meantime, since the award had come, organized their shop committees—elected by all the employees to negotiate with the employers—in accordance not only

### Professor Edward A. Ross of Wisconsin Member of the Mayor's Committee to Investigate the Madison Strike, Says:

This is a perfect illustration of how a quiet industrial community like our town of Madison is pulled into the vast current of transformation. There was practically no radicalism among our wage earners here formerly, but there is every prospect that we shall come out of this experience with a marked class consciousness and a good deal of radical opinion among wage earners. It has happened a thousand times before in this country in the last thirty years and I suppose it will happen a thousand times again before some basis is found upon which modern industry can settle down.

We seem to be on the eve of a general strike in this town, which of course will contribute tremendously to the growth of class consciousness.

Brown in Chicago Daily News

Making it easy for anarchy to get in

with the particular award referring to Madison, but with the general principles of the War Labor Board. Practically all these committeemen, under the circumstances, were union men. These men were discharged at every opportunity. New workers were brought in from the outside to take the places of men who had served with the firms from one to four years and they were paid higher wages than the men discharged.

Finally, on April 14, the Mayor of Madison appointed a committee of five to look into the trouble, report and make recommendations. That committee was composed of two business men, Prof. Edward A. Ross of the University, Prof. Stephen W. Gilman of the School of Commerce at the University, and Dr. Charles McCarthy of the Legislative Reference Library.

The feeling was becoming more and more intense. As a matter of fact, there was little disorderliness. In the few cases of disorderly conduct in which strikers were involved none was found guilty. The case of an employer who struck a workman is still pending.

The mettle of the workers was tested again and again in the hearings of the Mayor's Committee. It was estimated that between \$500,000 and \$800,000 was due in back pay to the men. They offered in spite of their straitened circumstances to take it in Liberty Bonds.

**M**ORE and more as the strike kept up, it developed that the workers were out more for the "collective bargaining" principle—the right of employees to choose their representatives to bargain with the employers' committees—than for anything else. They felt they were fighting for a principle. They had held their elections for committeemen not at union headquarters but in an open hall in order to insure access to the rare non-unionist. As a matter of fact, the principle had practical aspects. The classification of workers under the award was left to these committees of workers and employers. In one instance an employer informed the committeemen that he would make his own classification and would then compare it with theirs. From testimony in the hearings before the Mayor's Committee, it developed that his idea of "classification" was to call each man into his office and offer to classify him high if he would leave the union, low if he stayed with his union.

Three weeks later, on April 21, word came that the appeal of the employers had been denied. Some progress has been made since in reimbursing for back pay, but the principle of collective bargaining was repudiated by some of the employers.

Many of the workers had feared that the employers

were but waiting and hoping, all thru the winter, that peace would come and that then they would not be under the jurisdiction of the War Labor Board. One of the employers testified that at no time during the period before the last denial of the appeal for rehearing had come did he consider himself to be under the jurisdiction of the principles of the War Labor Board. Yet in many of the factories this sign had been put up:

**THIS PLANT IS DOING WAR WORK**  
**It accepts the policies laid down by**  
**the U. S. War Labor Board**  
**Employers and Wage-Earners**  
**This is your post of duty**  
**Do not desert it**

One of the most discouraging aspects of the trouble was the fact that the workers felt they could look to no administrative and executive machinery to carry out the award.

On the other hand, they had the support of two of the three newspapers in the town. The third carried full page advertisements of the employers a few days after the denial of the appeal (April 24) and again on May 2. Both of these are sad commentaries on the attitude of the employers. "The strikers walked out," reads the second, "while such an application (for rehearing) pending before the board was undecided. In so doing they violated the principles of the board." And then it goes on to explain that their plant had been closed down because of the "contemptible treatment of industrious and loyal employees of the company" by the strikers.

May 6, three weeks after it had been appointed, and five weeks after the strike, the Mayor's Committee made its report. As it was published it urged the principle of collective bargaining not only as the most scientific way of dealing with the question, but as the most expedient. It pointed out that England had adopted a far more radical system more than a year ago in the Whitley report. It deplored the delay of the War Labor Board. It warned of Bolshevism.

The strike is not yet over. One of the plants, on rehiring its men, tried to make them sign employment cards which would make them new employees, not entitled to back awards. Some of the employers refuse to meet with the workers' committees. The newspapers today carry a hopeful headline, "New rulings to end strike, belief." These new rulings provide that employers shall not go into the open market until all available striking employees have been taken care of, except of

course in certain cases where technical skill is required. The eight-hour day is granted, the application of the award to union as well as non-union workers, discontinuation of picketing, and provision is also made against discrimination against union men.

THE war is over. While it was going on Americans looked forward to a new order in which labor and capital would meet on a more amicable and more just basis. Employees had been threatened during the war with the cry of "Pro-Germanism" if they attempted to do better themselves. The war is over and they have more than done their share. The demands of American workers are very moderate compared to those of workmen all over the world. Many employers are rising to the occasion. Some are not.

The case of the strikers in Madison is important because it is testing out the endurance of the workers, physical and mental. Thus far it has seemed to be a case of who will starve first. The war profits of Madison employers, as published, were very high. Are they using them to withstand the demands of the workers? How long can the workers last? The workers have back of them the award of the War Labor Board, the denial of the appeal, the favorable report of the Mayor's Committee—both impartial bodies—a record of nine months' patient waiting, a record of patriotic coöperation; and the employers have their financial strength.

How long is the country going to allow some recalcitrant employers to bring on a flood of revolutionary destruction? The workers alone cannot hold the dam.

*Madison, Wisconsin*

### Rainsboro Spruces Up

*(Continued from page 480)*

lected painting houses, building fences, repairing streets. The town looks shabby and poverty stricken. No one in town has bought clothing for two years, so the dry goods and clothing merchants suffered. Every man, woman and child in town ought to buy new clothes right away. The moving picture house was closed excepting one day a week during the war, so Ed Hill had to work his garden the rest of the time. That threw him and Mollie Burns, his cashier, out of jobs. Open it up again. No one went to the restaurant during the war, so it closed and Bill Guthrie lost his income. Now Tommy Wall is back from the war, howling that Russia is right and not as bad as Rainsboro. He was company cook. Let Bill reopen and hire Tommy to cook and we'll all go there at least once a week.

"Let's resume business, spruce up and hustle, give the boys work."

Uncle Bob sat down. His motion carried with a cheer.

The first monthly report of the Business Men's Association was as follows:

"Jobs found for returned soldiers, twenty three. Business conditions show improvement in all lines. Discontent and Bolshevism have disappeared. Still unemployed: Uncle Bob Harwood."

Health is the greatest  
of all human assets

WITHOUT good health  
we cannot enjoy life,  
nor can we earn a livelihood.

Dyspepsia and other mild  
forms of indigestion may be  
the stepping stones to under-  
mining the health of a man  
or woman.

For any mild form of indi-  
gestion, I have never found  
anything that so generally  
gives relief as does my orig-  
inal Pepsin Chewing Gum.

# What's Happened

The Hungarian Republic of Soviets declares that it has not attacked the Czechs, but merely defended the armistice line and that it will gladly accept the invitation of the powers to participate in the peace conference.

At Zurich a mob started by Spartans looted the Hall of Justice and burned the archives. Two persons were killed and seventeen wounded in the fight with the police.

The city of Fiume has voted a bond issue of twenty million dollars for an army to defend the city, to be organized by Sem Benelli, author of "The Jest."

The congress of the Norwegian Socialist Party has declared its sympathy with Russian Bolshevism by a vote of three to one. The young men's party of the Swedish Socialists also voted to support Lenin by 117 to 5.

Kolchak's statement of his aims has been accepted as satisfactory by Lloyd George, Wilson, Clemenceau and Makino. They have promised a continuance of financial support and supplies, but they still withhold formal recognition to the Omsk Government.

Italy, like France, is seriously disturbed by labor troubles. At Turin and Milan a general strike has begun. At Spezia the shops in the city and villas in the neighborhood were looted by mobs.

New Zealand will have to pay \$10,000,000 a year for war pensions. And the population of New Zealand is only 1,000,000.

Two new universities have been opened in Germany during the war; the first at Frankfurt in October, 1914, and the second at Hamburg in May, 1919. This is following German precedent, for the University of Berlin was established in 1810 when Germany was crushed by Napoleon.

While the Austrian delegates are at Versailles waiting for the peace terms, their Government is threatened with overthrow by the Communists. An attempt to set up soviet rule at Vienna, as at Budapest, was prevented by the police.

The Poles have defeated the Ukrainians in eastern Galicia, capturing 135 guns and 1700 cars loaded with munitions, oil, grain and sugar.

The Council of Ten received the Turkish peace mission on June 17 at the Quai d'Orsay. The Turkish Grand Vizier, Danad Ferid Pasha, pleaded that Turkey had been forced into the war by Germany and should not be dismembered.

The Congregational Union of England and Wales is planning the adoption of a stronger organization with a view to helping the poor churches and strengthening the denomination. The country will be divided into nine "dioceses" each under a superintendent,

who, however, will not be given the title of "bishop." American Congregationalists have taken a similar step in appointing a secretary to look after the denomination as a whole. Thus the most independent of churches falls in with the One Big Union idea that prevails in international politics and industrial life.

Canadian soldiers at Whitley Camp, England, ran amok for several days. They looted the officers' mess, burned a theater and most of the shops, robbed safes and defied authorities. Several men were wounded in the riots.

General Leonard Wood has issued an appeal for the support of every agency that can furnish jobs for discharged soldiers, and cautions against a slackening of effort. Discharged soldiers out of jobs are good material for mischief-making radical orators, he warns.

Will H. Hays, chairman of the Republican National Committee, has rejected the challenge of the Democratic National Committee to make the League of Nations a partizan issue, and declares the conclusion of the treaty of peace to be an American question and not a party question.

Of bills to end terrorism, presented in the House, one measure would make bomb-placing punishable by death, another would halt immigration for three years, another would deport alien conspirators, and another would deport aliens who, during the war, did not become citizens that they might serve.

Speakers at the convention of the American Medical Association opposed whiskey but favored beer and light wines, arguing that people would get their alcohol in deleterious patent medicines if deprived of it in every other form.

The United States Railway Administration has spent \$14,341,000 for purchase or building of canal and river equipment. Director General Hines advocates continued operation of these waterways by the Government.

The United States has been asked to supervise the next Cuban election to prevent the "theft of election" by the party in power, since no redress for fraud would be possible under the present United States dictum barring revolutions.

New York, sixth of the states to ratify woman suffrage, went on record with a unanimous vote in both houses of the Legislature, except that one senator was excused from voting.

Declaring that the League of Nations would not end the necessity for armies, General Peyton C. March pleaded before the Senate Military Affairs Committee for a peace-time force of at least 500,000 men.

Students in the high schools of New York City who were required to answer examination questions searching

out their views on Bolshevism and its principles voted in favor of Americanism in the ratio of 300 to 1.

Representatives of the committee investigating the activities of radicals in New York State raided the offices of the Russian Soviet Government mission in New York City and seized material used for Bolshevik propaganda purposes.

A big drive has started in all cities to recruit 50,000 men for the peacetime land forces of the United States. Many will be sent to France and the Rhine to replace A. E. F. men guarding the bridgeheads.

The New York State Federation of Women's Clubs has invited State Federations thruout the nation to join in a campaign to secure full equality for women in all lines of work. Twenty-five thousand business and professional women are represented in the New York membership.

The naval appropriation bill as reported to the House carries \$600,000,000, which is \$300,000,000 less than asked by Secretary Daniels. The size of the army is reduced from 500,000 to 300,000 by withholding appropriations in the army bill.

New York City's educational program for this year asks for \$17,950,206.30 for construction work and new sites for schools to relieve the present overcrowding. Fifteen new elementary and four new high schools are contemplated.

The House Judiciary Committee has rejected recommended repeal of wartime prohibition as affecting light wines and beers by insistence on a section in the enforcement bill defining as intoxicating liquor that containing one-half of one per cent of alcohol.

The transport "Leviathan," biggest of all steamships, arrived from France with 14300 persons aboard, the greatest number ever carried, and a round trip speed record of fifteen days, six hours and four minutes.

The National Association Opposed to Woman Suffrage has launched a

## The MIRACLE of MILK

### Drinking Your Way To Health

You know in a general way that milk is good for you. But if you knew what a precious life-giving fluid it really is—if you knew the almost miraculous results it produces for those who drink it intelligently, you would be truly amazed. For anemia, indigestion, constipation, any difficulties of the stomach, liver, kidneys, heart or bladder, Bright's disease, rheumatism and many other ills for which physicians have no reliable remedy, the right use of milk almost invariably overcomes the trouble. For instance, feet and hands that are usually cold and clammy, become warm and life like a few days after beginning this marvelous self-treatment. Bernard Macfadden, the famous physical culturist in collaboration with Dr. Sanford Porter, the milk diet specialist, has written a book of priceless value entitled: "The Milk Diet, How To Use It."

campaign to defeat ratification. The rally call announces that anti-suffragists have only thirteen states to win, and that they will "fight woman suffrage to the last quarter of an hour."

Thirty-one governors have been asked by Governor Goodrich of Indiana to join in a concerted national action to hold special sessions of legislatures to effect ratification before 1920 of the woman suffrage federal amendment.

Meat dealers have announced that consumers are to blame for the high cost of meat because "Everybody is neglecting lamb and mutton," and a great group of the population is holding back on the consumption of meat, as they did in war times.

Labor's protest against war-time prohibition, in a Flag Day demonstration at Washington was the occasion of an impassioned speech by Samuel Gompers challenging "the moral right of any one to prescribe by law the morals and habits of the people of the United States."

The itinerary for President Wilson's speechmaking tour in July to explain the League of Nations to the American people has already been tentatively planned, and includes large cities in many sections, and territory as far as the Pacific coast.

The United States Shipping Board has sold nineteen new steel ships, with a deadweight tonnage of 128,472, to seven American firms for \$27,821,120.

The House voted only \$15,000,000 for naval aviation. Secretary Daniels had asked \$45,000,000. He will make an effort to persuade the Senate Naval Committee to increase the appropriation to \$36,000,000.

Equal strength fleets in the Atlantic and Pacific, and an Asiatic fleet, is the United States Navy peace plan as announced by Secretary Daniels. The divisions will compete in war tests. Admirals Wilson and Rodman command the Atlantic and Pacific and Admiral Gleaves the Asiatic fleet.

Directors of the Midvale Steel and Ordnance Company have voted to spend \$8,000,000 for reconstruction work, for the establishment of a pension system, and for a home buying plan under which the company will advance to any employee the cost of any property he may purchase as his home.

The American Defense Society has started a systematic campaign to combat anarchy. Expulsion from the country of all alien Bolsheviks, Socialists and Anarchists is advocated, and citizens are asked to give individual aid by investigating and reporting suspicious Bolshevik meetings or activities in any community.

Despite the world war, international commerce has increased from forty billions of dollars in 1913 to sixty billions in 1918. Nearly one-half the world's total was handled by the United States, Great Britain, France, Italy, Canada and Japan.

## Remarkable Remarks

MARY PICKFORD—Money isn't everything.

SIR FREDERICK HENDERSON—I am afraid of America.

WILLIAM H. TAFT—Ask any woman what "proposes" means.

REV. WILLIAM BURGESS—The modern stage is set for Hell.

D. W. GRIFFITH—The motion picture will Americanize the world.

CONGRESSMAN KAHN—Europe is a hell-hole of political plotting.

SENATOR BORAH—The hour has struck for me to speak out boldly.

RICHARD CROKER—If you have any money to bet, put it on Dempsey.

JANE COWL—Few women are so weak as the sex plays would make them.

LENA CAVALIERI—There is nothing so important as to be well corseted.

PROF. FRANCIS WARD—Fish fall in love just as surely as human beings.

MANAGER JOHN MCGRAW—The first thing I look for in a young player is speed.

REPRESENTATIVE GILLET—President Wilson will not be elected to another term.

RAMSAY MACDONALD—The first Soviet ever known was the British House of Lords.

VICE-PRESIDENT MARSHALL—Are the hopes of humanity to be but the apples of Sodom?

ED. HOWE—My greatest ambition is to own two pairs of suspenders at the same time.

CHARLES HANSON TOWNE—Murder and arson are the daily food of the modern child.

ARTHUR BRISBANE—A devil blushing thru the fur on his face would be a very interesting devil.

JULIA MARLOWE—We feel that people are more interested in Shakespeare now than for a long time.

"BUGS" BAER—Krupp's is manufacturing charlotte russes and the Kaiser is cutting out paper dolls.

VICE-PRESIDENT MARSHALL—I favor sending a large enough force to Russia to exterminate the Bolsheviks.

SENATOR REED—The administration of Woodrow Wilson is a hybrid between a French Revolution and an Oriental despotism.

MINNIE MADDERN FISKE—If people knew in what condition animals are received at the stock yards less beef would be eaten.

MONTAGUE GLASS—If we must have a college president for President, we should at least elect a president of a business college.

REV. DR. CORTLAND MYERS—The Peace Conference is a tragedy, almost a blasphemy. They have never had a prayer and have never mentioned God.

SECRETARY OF WAR BAKER—America's effort in this war is altogether the most spectacular exhibition of national strength which has ever taken place on the face of the earth.

## Your Child's Questions about Trees, Flowers, Butterflies and Birds should be correctly answered.

Can you, or do you try to bluff it thru? Possibly you tell your child not to ask such foolish questions.

Grow up with your children. Learn nature with them. The Independent is just publishing four handy volumes, one each on Trees, Flowers, Butterflies and Birds. This set should be on your library table right now, ready for quick reference. The illustrations are of course in full color—even the trees. Send no money. Just write The Independent, 119 West 40th Street, New York, to send you the Pocket Nature Library. Keep it for five days. If you don't like it or believe it is not worth what it cost, send it back. Most likely you will want it for yourself, to say nothing of the children, or the Boy Scouts, or your nephews and nieces, or your neighborhood. If so, send check, money order or some other safe way (not cash) for \$1.25.

Nature is at her peak of beauty right now. Get next to her by sending today for these books. A postal will do if you write it so we can read it.

**"I'm happy because I took The New Way in Typewriting Course. It has enabled me to earn more money than other girls."**

### You, Too, Can Earn \$100 to \$150 Per Month

Retain your position when others are being discharged. Thousands of typists will lose out through lack of efficiency. Now is the time—take the NEW WAY Course—study at home and rise to bigger wages. A few easily learned lessons at a small cost. Free Business Training given each student. THE NEW WAY in Typewriting guarantees a writing rate of 80 to 100 words a minute. Write for free booklet.

**THE TULLOSS SCHOOL**  
NEW WAY IN SHORTHAND AND TYPEWRITING  
3826 College Hill, Springfield, O.

### Training for Authorship

How to write, what to write, and where to sell.

**Dr. Esenwein** Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

### When the Tiger Talks

Premier Clemenceau began his stormy political career in 1860 by getting arrested for demonstrating against the Emperor. And recently he was shot at by somebody who thought him too much of an emperor himself. Those who know him only as a journalist and statesman will be surprised to learn that he is a playwright, novelist and author of short stories and philosophical essays. He taught French for a time in a girls' school at Stamford, Connecticut, and found his wife in America. Whether in his role of statesman, author or professor, "The Tiger" is a phrase-maker *par excellence*. Here are some of his "remarkable remarks" from a sketch of him by Gustave Gefroy, published by Georges Crès et Cie, Paris:

No doubt judicial errors date back to the age of the first man that judged.

The errors of every man who pretends to have authority over man are numberless.

Words are too often nothing but feigned zeal.

I said to God, "They are outraging thee! Now show thyself!" God did not show himself. Then repelled on every hand, I understood that all men, and God himself would not be enough to make truth a lie. So I felt comforted.

Democratic publicity, which is not without its disadvantages, owing to the promptitude and mobility with which it may create movements of opinion, is of great value as a popular educator when there is a strong, simple soul to express the verdicts of the universal conscience and wherein each man, worthy the name, may recognize the sovereign affirmation of the best he has in him.

When I was a boy I used to go and cry over "Uncle Tom's Cabin" at the theater of Nantes. The most affecting scene in the play was where a judge who, after rigorously pronouncing the legal verdict against the fugitives, gradually found himself drawn, by "respect for the rights of humanity," to shoulder his gun to deliver them. That is the beauty of President Wilson's case, with this difference, that his gun in favor of people's rights is shouldered in the defense of what is legal.

The august, indisputable and immutable right which the Pilgrim Fathers on the "Mayflower" took with them from Europe, is now brought back to us by their sons beneath the shield of iron which they have forged with their own hands.

Thus the holy Ark of idealism which was preciously conveyed to American soil by men of faith, returns to us for unknown conquests of liberty.

If Old England and Old France and Old Italy must suddenly sink beneath the bloodthirsty onslaughts of barbarity's bestial brutality, there would still be, from the Atlantic to the Pacific, a sure place of refuge for the nobility of the human soul, an inviolable home for the present and future aspirations of liberty.

The Declaration of Independence, steeped as it is in our eighteenth century, which was sanctioned in our view by definite deeds, had thrown words of inflexible and irrevocable resolution to the four winds of heaven.

What I like especially about President Wilson's addresses is that there is nothing literary about them.

### Help the muscles to come back!

One of the most remarkable things about the human body is its recuperative powers—but to come back it needs care, not neglect.

Tired and weary muscles if given a good rub with *Absorbine, Jr.*, will be fresh and strong in the morning, ready for another strenuous day's work.

**Absorbine, Jr.**  
THE ANTISEPTIC LINIMENT

The very next time you over-exert yourself, or find an unaccountable lameness in your muscles, or stiffness in your joints, stop at your druggist's on the way home and get a bottle of *Absorbine, Jr.*

—Give the affected parts a good stiff rub, using a few drops of the liniment in the palm of the hand, and see how different you feel in the morning.

\$1.25 a bottle at your druggist's, or postpaid. Good-sized sample bottle sent on receipt of 10c in stamps.

## Pebbles

A girl, at least, may smile and smile and be a-willin'.—*Yale Record*.

We gather from the newspaper that shooting for the new Mexican Presidency has commenced.—*Punch*.

She—Did you know that Maude has a dark room on purpose for proposals?  
He—Well, rather. I developed a negative there myself last night.—*Blighty*.

"What kind of a woman is his wife, Amanda?"

"I think she is what you call a mandatory."—*Baltimore American*.

He—I notice that women don't wear earrings in their ears so often nowadays.

She—No; but they still have them bored.—*London Opinion*.

The little pig was weeping,  
For his father had been slain;  
But a porcupine, consoling, said,  
"Oh, porcupine in vain."  
—*Harvard Lampoon*.

"You say your laundry woman reminds you of a good preacher?"

"Yes; she's always bringing things home to me that I never saw before."—*Boston Transcript*.

"Has your wife a sense of humor?"

"I don't think so," replied Mr. Pynhed. "I have told her the same joke over and over and I don't believe she has laughed at it more than twice in her whole life."—*Washington Star*.

Binks—As one grows older there are certain things in which it is difficult to keep up one's interest. Don't you find it so?

Jinks—Er—yes; there's the mortgage on my house, for example.—*Boston Transcript*.

Merchant—Did you deliver my message to Mr. Smith?

Boy—No, sir; he was out, and the office was locked up.

Merchant—Well, why didn't you wait for him, as I told you?

Boy—There was a notice on the door saying, "Return at once"; so I came back as quick as I could.—*The Passing Show*.

Ex-soldier answering advertisement for cook: "I'd like to apply for the job, sir."

Hotel Man—What can you cook?

Ex-soldier—Anything, sir—I used to cook in the army.

Hotel Man—Well, how do you make hash?

Ex-soldier—You don't make it; it just accumulates.—*Carry On*.

"A burnt child dreads the fire," announced the teacher during the lesson in proverbs. "Now give me a sentence different in wording but meaning the same thing."

A grimy hand shot up from the back of the class.

"Please, teacher," came a small voice, "a washed child dreads the water."—*Blighty*.

"Inner history of the war made public. England in uproar over sensational disclosures in Viscount French's book."—*Press Dispatch*.

## "1914," The Memoirs of Field Marshal Viscount French

Preface by Maréchal Foch

The complete, uncensored and authoritative account of the operations of the British armies during 1914, including the retreat from Mons, the battles of the Marne and Aisne, the siege of Antwerp, and the first Battle of Ypres. Here at last are the real facts of the war. America will be stirred as was England by the startling disclosures in this first war book by a commanding general of the Allies. Frontispiece and maps. \$6.00 net.

### METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds is an ideal place to live in.

As a war measure, the course was reduced from three years to two years and six months. The cessation of hostilities will not end the need for nurses abroad; they will be needed, in large numbers for reconstruction work, and for the establishment of schools of nursing in the different countries of Europe for a long time to come. We plan, therefore, to continue the course of two years and six months.

For Information write to MISS AGNES S. WARD, Superintendent

### DEAN ACADEMY

FRANKLIN, MASS. 53rd YEAR

Young men and young women find here a home like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$125-\$400 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt.D., Principal

### BISHOP HOPKINS HALL

An excellent school for girls conducted by Late Champlain. Well equipped building. All outdoor sports. College preparatory and general course. Write for booklet. Miss JAMES ALICE GILLES, Principal.

The B. R. R. A. C. A. Hall, Portland and Chatham, Vt.

### PACIFIC SCHOOL OF RELIGION

An undenominational union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. All privileges of University of California open to qualified seminary students. Term begins August 18, 1919. Address: PRESIDENT C. S. NASH, Berkeley, Cal.

### RANDOLPH-MACON WOMAN'S COLLEGE

LYNCHBURG, VIRGINIA

One of the leading colleges for women in the United States. Invites prospective graduates of approved four year high schools to enroll for the session 1920-21. For further information, address THE REGISTRAR, Box 46.

# A Talk to Investors

By Luigi Criscuolo

## The Speculative Fever

THE warning issued just before the middle of this month by the Federal Reserve Board that speculation must stop was the culmination of the wild orgy which began with the booming of indiscriminate oil stocks—good, bad and indifferent. It was inconceivable that the stock market should have reached such high levels during the first part of the month, considering the fact that peace was not yet signed, that social unrest was spreading thruout Europe, that there were violent labor troubles in England, France and Italy and that our own country was threatened by bomb outrages, telegraph and telephone strikes and general uncertainty in labor circles.

To the insider who is not blinded by the tricks of the trade, the rising market was purely an attempt on the part of the speculative element to distribute stocks on the eve of important events. No attempt is made to infer that any one knew that the Federal Reserve Board would issue a warning against excessive speculation, but those who were shrewd enough to measure events realized that the wild market had run its course, for some time at least, and that a sharp recession was inevitable.

There is a way to prevent such occurrences and that is to restrict marginal trading in stocks. Perhaps it might be wise to restrict marginal trading to full one hundred share lots so that speculation of this sort would be the luxury of the rich. In the natural course the advance of the market was stopped abruptly by the rise in call money, which at this writing is above 12 per cent. The difficulty in controlling such a market lay in the fact that the public all over the country was incited by stories of fortunes in oils and rushed into the market, pledging Liberty Bonds in order to buy anything that was offered as a possibility. With the sudden collapse in the market, many weak accounts must have been totally wiped out, thus adding more names to the already large list of people who condemn Wall Street because it made no fortunes for them.

## The Warfield Railroad Plan

S. Davies Warfield, president of the National Association of Owners of Railroad Securities, and chairman of the Seaboard Air Line Railway, recently issued a platform upon which he believes any legislation for the return of the railroads to private ownership must be based. Mr. Warfield believes that the policy that has successfully furnished incentive and initiative should be continued because it has developed our railroads, and thru them, the country. He believes that incentive and initiative vanish in the proportion that the Government forces concentration of facilities and takes the place of the individual in private management,

to the extent that it limits the inducement for reasonable profits, and that it limits the opportunity for rewarding efficiency.

Mr. Warfield believes in competition between railroads, not between regions, to avoid the building up of one region as against another; that rates should be adjusted to produce a fair return on the amount invested by a railroad, so that capital can be secured for improvements and extensions and so that it would be possible to secure in the management the best brains obtainable. Mr. Warfield does not believe in the regional system of consolidation but rather leans toward consolidations along natural lines and public interest, under the guidance and advice of capable experts.

The plan should be given careful consideration. However, no plan that is advanced by private interests can result in anything unless Congress shows some inclination to interest itself in the question. Meanwhile, the railroads have been saddled with a wage scale that staggers the imagination, rates cannot be raised to any extent, for that in turn would cause an advance in commodity prices and result in another demand for higher wages on the part of working people all over the country. Which brings us again to the same thought of how much worry and trouble could have been spared the country if politics had really been adjourned. The railroad stockholder has a problem on his hands which Congress will have some trouble to solve.

## The Mercantile Marine Debacle

The stockholders of the International Mercantile Marine Company met on the 16th of the month to vote on the proposed sale of the company's British ships to an English syndicate. They refused to ratify the sale, which confirmed the views expressed in The Independent in the issue of June 14. Those stockholders who bought the common shares on the assumption that with the promised activity in foreign trade the company should reap a handsome profit, may feel gratified that the attempt of certain directors to sell out a prosperous American concern to British interests was defeated. However, it would be quite opportune for them to reorganize their board of directors so as to include only men who would look out for the interests of the American stockholders.

## Directors Must Direct

It was recently announced by a New York newspaper that President Oler of the American Ice Company had a resolution passed at a meeting of the board of directors of that company requesting members of the board who had ceased to hold substantial amounts of the stock to resign and make place for new interests which had acquired stock for investment. Assuredly this is a

new departure, and a highly commendable one. If all corporations whose securities are generally held among the public would follow suit, there would be few financiers who could boast of having a place on twenty or thirty boards, deriving a fee from each for every meeting attended, altho only perfunctory business had been transacted at each meeting.

Perhaps the time will come when minority stockholders will have a right to name a representative to take care of their interests as a member of a directorate. If this practise was general there would not be so much talk of Wall Street control of corporations. It would be extremely easy for a large number of small stockholders of any large corporation, the Pennsylvania Railroad, for instance, to form a committee and request that one of their number be given representation on the board. In fact, in many progressive corporations such a proposal would meet the approval of those in power. The presence of the "rank outsider" would help the company in its dealings with the Government and with labor, which are the two dangerous factors to be considered in the future, particularly in the case of the railroads.

### Be Your Own Weather Prophet

Did you ever stop to think how much more we know about the weather than we did a hundred years ago? And how much more yet we need to know? Government weather reports are growing more and more detailed and accurate as the need for them increases—in such different fields as transatlantic flights and speculation on the grain crop and the purchase of a new lawn-mower, for example. But it won't do to let professional weather prophets spoil the amateur game, and the New York Sun has compiled the following set of rules to encourage home made weather forecasts:

When standing on high ground and the horizon is unobstructed from all quarters, if the sky is absolutely cloudless, look for a storm within two days.

When it is raining and it brightens and darkens alternately you can count on an all-day rain.

Another sign of continued rain is when the smoke from the chimney hovers low around the housetops. When it ascends straight into the air this indicates clearing weather.

When the rain ceases and the clouds are still massed in heavy blankets one sure sign of clear weather is the patch of blue sky that shows thru the rift large enough to make a pair of "sailor's breeches."

A foggy morning is usually the forerunner of a clear afternoon.

A thunderstorm in winter (usually in January or February) is always followed by clear, cold weather.

A red or copper colored sun or moon indicates great heat. A silvery moon denotes clear, cool weather.

The old Indian sign of a dry month was when the ends of the new moon were nearly horizontal and one of them resembled a hook on which the Indian could hang his powder-horn.

## The Men Who Built the Ships

(Continued from page 482)

think he understands human nature better than any man I ever knew. He is a mighty human sort of man, the kind of man you want to work with and jump with. We were before a big crowd, with certainly 12,000 workers, in the Skinner plant in Seattle. The men simply went wild over Schwab. He was a tremendously popular and spectacular figure. The workers were around thicker than I had ever seen human beings packed together before. They were on the roofs of sheds. Simply banks of humanity everywhere. Mr. Schwab talked. I also talked.

When Mr. Schwab got up and talked some fellow way back in the crowd said, "Hey, Charley, do you remember the time you bet your pants in a game of poker and walked home in your drawers?"

Schwab just laughed.

He certainly is what the workers called "a good sport." Any man that would go that limit on a bet must be.

He had the same spirit of absolute fairness about everything; he was as good as his word. My association with him was one of the compensations that I got for my work with the Fleet Corporation.

He loves a good story. I try not to take my worries home with me. I do my best and then go home and try to forget. He used to help me forget. Sometimes just before leaving I'd be pretty tense—I smoke very little. He doesn't smoke at all. Well, he'd drop into my office on the way out and say, "What kind of a day have you had?"

"Hard day," I'd say.

"I saw a lot of people in your office," he'd remark, and then he'd drop into story-telling, and a little while later leave you laughing. He believes in getting the most out of people with approval and encouragement; he not only preaches that doctrine but practices it. When he came down here he said, "You know, Mr. Piez, I don't want to come down here to get into the actual management of this thing. The Lord has been very generous with me to give me the power to enthuse and inspire others. That's what I want to do. You have got to do the rest."

He took the job when enthusiasm was going down and at once it started to go up.

He told me at first that he wanted only two men to report to him. A little while later he said, "What's the matter with this organization, anyway?"

I said, "Don't you know what's the matter?"

He said, "No."

I said, "You have split it in two and you haven't tied it together."

He said, "I know. I don't want to give too much time to that—I can do more the other way."

Then he said, "Charley, you arrange it, and report to me."

After that I was the only man to report to him. That was necessary, because those who know the ropes of any big organization know that some one

has to keep himself open to others because there is an overwhelming amount of work necessary in bringing an organization up to proper pitch. He had a theory that we could do relatively little down in Washington, to illustrate. He was absolutely sound. We decided to move to Philadelphia in December—the December before he came—but we didn't get very far. His first decision was to move to Philadelphia, because he is a man who wants to work on the men who do the actual physical labor. He wanted to get nearer to the yards, some of which were around Philadelphia, notably Hog Island.

He is a wonderful organization worker. There are some men who play by note, and some who play by ear, as it were. Schwab lets his emotions and feelings play. That is why men will do anything in the world for him.

Washington, D. C.

### Two Ghosts

The German Empire was in large part the creation of two men of mighty genius, who successfully achieved the difficult feat of separating politics and ethics. The average bad man is a wretched bungler and if he escapes hanging he does not escape failure and contempt. It was the sad fate of Germany that Frederick the Great and Otto von Bismarck were able to convince Prussia that the way of the transgressor is not always hard and that not every Ahab is punished for annexing Naboth's vineyard. The Kaiser and his advisers did not see that successful rascality requires exceptional genius and that they were too short of stride to tread in the footsteps of these giants of the past. Napoleon III failed because he thought he was Napoleon I; the Kaiser failed because the Hohenzollerns had always succeeded.

Frederick and Bismarck, indeed, mixt in enough morality with the basic immoralism of their characters to produce a workable alloy. They showed qualities which won the admiration of good men; Carlyle, for example. Both had a certain bluff good nature, which is revealed in a thousand anecdotes; they lacked the inhuman stiffness of the petty diplomat. They were men of frankness, of shrewd common sense and insight into the realities of things, unafraid of facts and not given to illusions. Finally, they well understood the statecraft of moderation. No dreams of world conquest such as drove Napoleon to disaster perplexed their plans. Frederick conquered Silesia and divided Poland; then stopped, with an unbeaten army. Bismarck united Germany and seized Alsace-Lorraine; then stopped, with an unbeaten army. Both men were always careful to have as few foes and as many friends as possible when they went to war; it is impossible to imagine either flinging the gauntlet in the face of every neutral nation as did the rulers of Germany in the present war.

But all the merits of the great King and the great Prince did not make them safe or estimable heroes for the German nation. They were essentially bad men, not because of this or that infrac-

## Now That the War Is Over—

And normal conditions are returning, it seems fitting to remind the public that the record of S. W. Straus & Co., without loss to any investor, has been maintained through the trying times of the last five years.

Every bondholder has been paid promptly in cash, both principal and interest, on the days due, without loss or delay.

### Sound 6% July Investments

For July investment, we offer a widely diversified list of first mortgage 6% serial bonds, safeguarded under the *Straus Plan*.

Each bond issue has been purchased by us from the borrowing corporation, after careful investigation, and is offered with our full recommendation as a thoroughly safeguarded investment. Denominations, \$1,000 and \$500. Maturities, two to fifteen years. Every investor should write today for our

tion of the morality of nations, but because they denied that morality had anything to do with the conduct of nations. It is not on record that either Frederick or Bismarck turned aside from any course of action because of any human right which barred the way. They made cynicism fashionable. Their weak and stupid disciples in the German foreign office made the mistake of thinking that because Frederick and Bismarck had been at once unscrupulous and successful any one who rid himself of hampering scruples and fine sentiments could win diplomatic victories. When all is said, Frederick and Bismarck were very great men, so great that their worshipers could see but one side of their personalities; the wrong side. They imitated the narrow, selfish aims and the brutal, treacherous methods of their idols; they did not imitate, because they could not comprehend the wise caution and moderation which were the real secrets of success. Bill Sykes imitated Raffles to his undoing.

Every nation is ruled by ghosts, the men to whom statues are erected, in whose honor songs are sung in the schools, after whom streets are named. These men mold the policies of future generations. Frederick was the Washington of Germany; Bismarck, the German Lincoln. Imagine what would have been the effect on our political history if Washington had been an atheist king with a pale sneer graven on his lips and with no higher ambition than the conquest of his neighbor's territories, or if Lincoln had been the sworn foe of democracy and the prophet of blood and iron! We owe more than we shall ever know to the fact that our great men drew their political maxims from the New Testament and not from Metternich or Machiavelli.

## There is Neither East Nor West

Lord Bacon said, "The genius, wit, and spirit of a nation are discovered in its proverbs." It is important for the American people to know as much as possible about what their wards, the Filipinos, are like. To help them attain this end, Jorge Bocobo, dean of the College of Law in the University of the Philippines, has made a collection of proverbs, handed down by word of mouth from generation to generation, of the Filipino people. Most of them suggest that human nature is pretty much the same on both sides of the globe. Here are some of them:

**BRAVERY**—A hero is braver for his wounds.

It is too late to withdraw when you are already wounded.

**CAUTION**—A fish is caught by the mouth.

Repentance never comes first.

Courage is of two sorts; one goes forward, the other retires.

Haste creates delay.

There is a snake in every jungle.

**CHARACTER**—Whichever side a tree leans, there it falls.

'Tis easy to be born, 'tis hard to be a man.

He who is raised in ease is usually destitute.

**CHOICE**—He who is hard to suit will choose the worst.

**COMPENSATION**—You laugh today, I laugh tomorrow.

**COUNSEL**—He who despises counsel is on the way to misfortune.

Whoever believes everything said has no mind of his own.

**DISDAIN**—You may dislike, but never despise.

**FAULT-FINDING**—The fault-finder has the biggest faults.

**FOOLS**—A wise man's joke is believed by a fool.

Fools earn for the wise.

It is foolish to argue with a fool.

**FORESIGHT**—Strength yields to plan.

Working early is better than working hard.

**FORGETFULNESS**—He who is happy is forgetful.

**FRIENDSHIP**—Let us fight, then be friends.

**GOOD DEEDS**—Good deeds are more precious than gold and silver.

Kindness is a great capital.

**GRATITUDE**—Kindness is with kindness to be paid, not with gold and silver.

**HOME, LOVE OF**—The pain of a finger is the suffering of the whole body.

**HONOR**—Even the poor love honor.

Break your head, but not your word.

**HOPE**—It may be mere mud, but above it is a piece of heaven.

I should not grieve over my misfortune, for what muddy water did not become clear?

**HOSPITALITY**—Tho my house is small, my heart is large.

**INDUSTRY**—A sleeping shrimp is carried away by the current.

A lazy dog does not get even bones.

Work put off ends in nothing.

He who is always preparing to do something, never does anything.

**MERIT**—The quality of gold is known by rubbing it against stone.

**MODESTY**—He who is high suffers a great fall.

The fly that rests on the back of a carabao (water buffalo) thinks it is taller than the carabao.

Boastfulness drives away wisdom.

Do not brag before landing the fish.

**PERSEVERANCE**—A thing is near, tho far, if you want it.

If you want eggs, put up with the cackling of the hen.

If you are afraid of every dog bark, you will never reach your destination.

**PRIDE**—Do not be too near your superiors, lest they trample upon your dignity.

**RIGHTEOUSNESS**—He who deviates from a clear path may lose his way.

**RUMOR**—A whisper is louder than a shout.

**SHREWDNESS**—If you want to fool, pretend to be a fool.

**TEMPTATION**—A piece of green wood will burn if placed near the fire long enough.

A wanderer will sooner or later slip.

A soft snare has a tight hold.

**THRIFT**—Easy earning means quick spending.

**TRUTH**—A liar loves to take an oath.

## Shall the Doughboy Keep His War Risk Policy?

By W. E. Underwood

IN the American army that fought in France were forty billion dollars' worth of men—in other words, men whose average property wealth was over \$8000 each. This is no pleasing figure of speech. It is a simple fact, one made possible and practicable by the science of life insurance, thru which even the poorest may be transformed into comfortable affluence.

But the forty billion figure, I fear, has sadly declined at this date. It was forty billion at the crest, but with the lessening of the war danger it is natural to presume that lapses in insurance payment have been too numerous. Several months have elapsed since the Bureau of War Risk Insurance at Washington issued any figures, and the last I remember seeing were the maximum. Unlike the insurance companies, the Government lacks those facilities necessary to keep life insurance policies in force, and relies mainly on the art of persuading each man to pay his premium when it becomes due.

Not long since one of my correspondents sought my advice respecting the Government insurance of \$10,000 carried by his soldier son. He informed me that an impression seemed to prevail among the boys that this insurance amounts to but little. The conclusion drawn by the son from his service experience was that the military policy was vacillating—"that a military rule or order today would most likely be modified or altogether annulled tomorrow," and that, hence, it is the feeling of the men "that there is nothing permanent but change." These observations were prefatory to the main question then confronting father and son: What are the advantages and disadvantages, as compared with insurance in private companies, of converting the existing yearly renewable contracts into other more permanent forms? There was plainly doubt in their minds as to the permanent management of the Government insurance.

My advice to the men is that they retain their Government insurance and, I am glad to report, this is the advice that has been printed and sent broadcast thru their agents by every reputable life insurance company in the country. The insurance is as mathematically sound as that furnished by the companies. As a matter of fact the scheme adopted by the Government is the one prepared by a committee composed of the best life underwriters of the country. Their responsibility ends there, however. They have had nothing to do with managing it.

That it has not been satisfactorily managed is quite evident. This, I fear, is true of every business operated by government. While a government department could be, and ought to be,

# Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

**Insures against marine and inland transportation risk and will issue policies making loss payable in Europe and Oriental countries**

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital to the extent of \$100,000 was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of ..... \$31,728,420,851.00  
 Received premiums thereon to the extent of ..... \$319,356,442.45  
 Paid losses during that period ..... \$157,034,362.32  
 Issued certificates of profits to dealers ..... \$100,230,470.00  
 Of which there have been re-deemed ..... \$94,086,050.00  
 Leaving outstanding at present time ..... \$6,144,420.00  
 Interest paid on certificates amounts to ..... \$24,838,024.95

On December 31, 1918, the assets of the company amounted to .... \$16,823,491.34

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

CORNELIUS ELDERT, President.  
 WALTER WOOD PARSONS, Vice-President.  
 CHARLES E. FAY, 2d Vice-President.  
 WILLIAM D. WINTER, 3rd Vice-President.

NEW YORK

### A New Life Insurance Policy

affording unexcelled insurance service; a combination of low cost, high values, and a new and original total disability feature, providing in the event of total and permanent disablement from any cause:

1. Waiver of future premiums.
2. A monthly income to policyholders throughout life.
3. Payment to beneficiary of full sum at death of insured.

Full information may be obtained from

The Penn Mutual Life Insurance Co.  
 Independence Square Philadelphia

### A Remarkable Record of Earnings

Dividends paid to Preferred Stockholders of Cities Service Company increased from \$521,387.09 in 1911, to \$4,034,274.50 in 1918.

In 1911, Cities Service Company earned requirements for payment of Preferred Dividends 1.77 times over. In 1918 the earnings were 5 1/4 times over the Preferred Dividend requirements.

#### Cities Service Preferred Stock

at present prices yields 7 1/2%. Investors receive monthly dividends, and monthly statements of earnings which enable them to keep in close touch with the company's financial progress.

Write for Circular CD-2 describing Cities Service Preferred Stock.

Henry L. Doherty & Company  
 60 Wall Street New York

run on efficient business lines, it never is. Lack of proper management, red tape, arbitrary and obstructive rules ever increasing, the irritable delays growing out of deadly and unchanging routine in short, as Dickens has substantially put it, the art of "how not to do it" these are the disadvantages to be faced.

If the War Risk Bureau is as well managed as the office of an average life insurance company, the results in net cost to the soldiers should be a little better, for there ought to be a substantial saving in the cost of operation.

### Poems About God

Lieutenant John Crowe Ransom finds religion, far from orthodox, in all sorts of unexpected places in everyday living, and he has put his discoveries down in poetry, surprisingly naive and full of infinite suggestion. Several of the poems in his book of *Poems About God* were published first in The Independent. We quote here two others:

#### DARKNESS

When hurrying home on a rainy night  
 And hearing tree-tops rubbed and tossed,  
 And seeing never a friendly star  
 And feeling your way when paths are crossed:  
 Stop fast and turn three times around  
 And try the logic of the lost.

Where is the heavenly light you dreamed?  
 Where is your hearth and glowing ash?  
 Where is your love by the mellow moon?  
 Here is not even a lightning-flash,  
 And in a place no worse than this  
 Lost men shall wail and teeth shall gnash.

Lightning is quick and perilous,  
 The dawn comes on too slow and pale,  
 Your love brings only a yellow lamp,  
 Yet of these lights one shall avail:  
 The dark shall break for one of these,  
 I've never known this thing to fail.

#### UNDER THE LOCUSTS

What do the old men say,  
 Sitting out of the sun?  
 Many strange and common things,  
 And so would any one.

Locust trees are sorry shade,  
 They are good enough;  
 Locust trees are sweet in spring  
 For trees so old and tough.

Dick's a sturdy little lad  
 Yonder throwing stones:  
 Agues and rheumatic pains  
 Will fiddle on his bones.

Grinny Bob is out again  
 Begging for a dime;  
 Niggers haven't any souls,  
 Grinning all the time.

Jenny and Will go arm in arm,  
 He's a lucky fellow;  
 Jenny's cheeks are pink as rose,  
 Her mother's cheeks are yellow.

War is on, the paper says,  
 Wounds and enemies;  
 Now young gallivanting bucks  
 Will know what trouble is.

Parsón's coming up the hill,  
 Meaning mighty well;  
 Thinks he's preached the doubters down,  
 And old men never tell.

## Independent Opinions

Much comment on both sides of the question has been aroused by Charles Johnson Post's article in The Independent of April 5, pointing out the abuses of our courts-martial system.

Here is what an enlisted man in the navy wrote to the author of the article:

Just to lend you moral support: I served in the United States Navy from 1901 to 1913; began as an apprentice seaman and for about nine years served as chief yeoman and a short time as paymaster's clerk. During my service I wrote up, and took stenographic notes of any number of courts-martial. I can corroborate every word you have uttered in The Independent, and am most wonderfully surprized that you are permitted to address the public on so important a subject—to enlisted men.

Service in our branches of the military of this country is nothing less than slavery, tho somewhat mitigated as time has gone on, and the whole system should be altered for the better. You are attacking one of its greatest faults.

W. E. RICHMOND

Verde, Arizona

A lawyer, whose son is in the navy, writes:

The American public owe you a debt of gratitude for your courage in printing the forceful and luminous article by Lieutenant Charles Johnson Post, in your issue of April 5, anent our horrible system of courts-martial in the army.

Do you know that within forty-eight hours of the appearance of that article the mails began to be flooded with copies of a long and labored attempted defense of his system written by General Crowder to Secretary Baker, accompanied with a letter of endorsement signed by Colonel and Judge Advocate John H. Wigmore? That all this printed matter went to each member of the American Bar Association? And all under frank? This one item of "propaganda" must have cost at least \$5000 and shows where part of the hard-earned money goes that our loyal men and women and children have been putting in Liberty Bonds.

Both as a citizen and as a subscriber I urge you to continue the good work you are doing. After an experience of over five years in Porto Rico and in the Philippines, where the abuses of courts-martial in the old army existed to a small extent; after living on the edge of two military camps here in Florida for about sixteen months, where officer after officer has admitted to me that the private "has less show in a court-martial than a nigger has before the Mayor's Court," and then reading what the recent Ansell exposé discloses, it is conclusive that the War Department is unwilling that all the public should know the facts. The Crowder Wigmore stuff goes thru the mails free. When one of us wishes to read the letter which was written by Ansell (when he was a general) to the Secretary of War, the latter hides it away.

ARTHUR F. ODLIN

Acadua, Florida

But Brigadier General Marshall offers an explanation of the sentences imposed in two cases given in the facsimile of court-martial orders published with Mr. Post's article. He says:

Neither in the original article in Harper's Weekly in 1914, nor in "What

# High Blood Pressure

R. L. ALSAKER, M.D.  
Founder and Director  
THE ALSAKER WAY

**The condition mentioned in this letter is very common among men past the age of forty-five.**

This is a case of hardening of the arteries (arteriosclerosis) with high blood pressure. An examination nearly always shows more or less Bright's disease, and this is generally caused by the excessive pressure, which forces the albumin through the kidneys.

The pain in the region of the heart is due to the over-worked condition of the heart, which is often aggravated by gas in the stomach and the bowels. The pain in the head is caused partly by the excessive pressure of the blood, and partly by accumulations of waste in the body.

Many physicians give nitro-glycerin to lower the excessive blood pressure, but this is useless, for though the pressure is temporarily reduced, it returns again.

**The condition described is dangerous because if allowed to continue the patient will usually expire from apoplexy of the brain, or heart failure; sometimes death comes through Bright's disease, with its accompanying uremia.**

**Is the condition curable?** It is in the majority of cases. Nearly everybody believes that hardened arteries with high blood pressure is a fatal affliction. And it is, if it is treated in the old way with drugs and a superabundance of food. If it is treated correctly, that is, in accordance with the laws of nature, at least four out of five will recover. Their arteries may not become quite as soft as they should be; their blood pressure may not return to the ideal point; but they will recover to such an extent that they have neither aches nor pains, nor are they in any further danger from apoplexy or heart disease. They will recover so completely that they can live to be old—far older than three score years and ten—and they can be so healthy that they can't feel anything wrong. And what more can they ask?

**In most of these cases correct treatment will reduce the blood pressure from twenty to thirty points the first month. After that the reduction is slower**

## Publisher's Announcement

R. L. Alsaker, M.D., is a new type of physician. He has written several text-books that explain the cause of disease and show the sick how to recover health. One of the most important is "Curing Diseases of Heart and Arteries." This is really a course of instructions (in book form) on the correct treatment of Heart Disease, Hardened Arteries, High Blood Pressure and Apoplexy. It gives specific advice on the way to produce a cure. All forms of heart disease are discussed and a correct home treatment prescribed. Send \$2.10 to cover cost of production and distribution and I will send you the book "Curing Diseases of the Heart and Arteries." Follow **The Alsaker Way** for 30 days. If you are fully satisfied with the good results obtained keep the book, otherwise return it and I will refund your money. George G. Porter, a prominent business man of Syracuse, N. Y., writes: "Measured by the usual fee charged by physicians for a single prescription or consultation, Dr. Alsaker's instructions are worth a fortune." **Free lectures.** A copy of The Alsaker Way lectures on any of the following subjects will be sent FREE on request: Catarrh—Rheumatism—Diabetes—Bright's Disease—Constipation—Appendicitis—Consumption—Headaches—Obesity—Eating for Health—What Every Wife and Mother Should Know.

Frank E. Morrison (Dept. 273, 1133 Broadway, N. Y., Publisher of The Alsaker Way Lectures

By R. L. ALSAKER, M.D.

(Specialist in Health Conservation)

Dear Doctor Alsaker:

**Last week I had two severe shocks.**

One of my friends had a stroke of apoplexy and is now in a very serious condition; another one dropped dead. Both of them are a little past fifty, and both of them have suffered from high blood pressure for some time. I am anxious because I too am past fifty, and my blood pressure runs from 190 to over 200. From time to time I have discomfort in the region of the heart and pains in the head.

A third friend tells me that he followed your directions and recovered. He is active and looks healthy, but I can hardly believe this, for my physicians—and they are good ones—have informed me that high blood pressure can not be reduced. Please write me frankly by return mail.

**I want to linger here a while longer.**

F. R. M.

If this is true, why don't most doctors and many laymen know it? Because both physicians and lay individuals are looking for cures from pills, powders and potions, aided by serums and operations. And these means will not work in cases of high blood pressure.

**The correct way, which is Nature's way, is so simple and reasonable that very few have discovered it to date. It consists of living so that the hardening process stops immediately, and then the blood pressure begins to decrease. Usually the patient is out of danger in a few weeks.**

So if you would overcome high blood pressure and soften arteries that are too hard you will have to learn how to use your lungs to get plenty of fresh air; how to drink the right kinds of liquids so as to aid in washing the impurities out of the body; how to eat the best of foods in the best way, so that these foods will build health instead of producing disease; and how to give the body good general care in every way.

There are exceptions who can not recover. This is because they have abused themselves so long that either the kidneys have failed beyond recovery; or the heart valves or heart walls have been too much injured; or the walls of the arteries themselves have become as brittle as chalk in spots.

**But the vast majority—at least four out of five on the average—can get into such good condition that they can truly say that they are enjoying good health.**

I have had patrons who were continually dizzy; who had surging of the blood to the head; who had daily headaches; who had oppression in the region of the heart (precordial pain); who were so short of breath that they could not walk upstairs, nor could they walk as much as a block without resting—yes, individuals with as bad symptoms as that have recovered very good health, after they had been told by competent physicians that nothing could be done for their hardened arteries and high blood pressure.

Nature performs wonders if you give her a chance.

## DIVIDENDS

## THE BROOKLYN SAVINGS BANK

PIERREPONT and CLINTON STS.

INTEREST AT 4 PERCENT  
THE RATE OF PER ANNUM

will be declared on deposits July 1, 1919.  
Deposits made on or before  
July 1st will have interest from July 1st.  
C. W. HADDEN, President  
L. W. SUTTON, Comptroller  
ARTHUR C. HARE, Cashier  
CHAS. C. PUTNAM, Asst. Comptroller

### PACIFIC GAS AND ELECTRIC CO.

COMMON STOCK DIVIDEND NO. 14

A meeting of the Board of Directors has been called for 2:30 o'clock P. M., June 29, 1919, for the purpose of declaring a quarterly dividend of \$1.40 at the rate of \$1.20 per share upon the Common Capital Stock of this Company, payable on July 15, 1919, to stockholders of record at 2:30 o'clock P. M., June 30, 1919. Checks for the dividend will be mailed. The transfer books will not close, and owners desiring checks payable to themselves should have stock certificates issued in their own names on or before the last mentioned date.

D. H. FOOTER, Secretary of the  
PACIFIC GAS AND ELECTRIC COMPANY.  
San Francisco, Cal., June 9, 1919.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Thirty-Year Five Per Cent. Collateral Trust Gold Bonds

Coupons from these bonds, payable by their terms on June 1, 1919, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company, 16 Wall Street.  
G. D. MILNE, Treasurer.

## United Shoe Machinery Corporation

The Directors of this Corporation have declared a dividend of 1 1/2% on the Preferred capital stock. They have also declared a dividend of \$1.50 per share on the Common capital stock. The dividends on both Preferred and Common stock are payable July 5, 1919, to stockholders of record at the close of business June 18, 1919.

L. A. COOLIDGE, Treasurer.

### UTAH COPPER COMPANY,

120 BROADWAY,

New York, June 9th, 1919.

The Board of Directors of Utah Copper Company have declared, for the quarter ending June 30th, 1919, a distribution of one dollar and fifty cents (\$1.50) per share, payable June 30th, 1919, to stockholders of record at the close of business on June 16, 1919.

The books for the transfer of the stock of the Company will remain open.

C. K. LIPMAN, Asst. Secretary.

## WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.

A Quarterly Dividend of 2% (\$1.00 per share) on the PREFERRED Stock of this Company will be paid July 15, 1919.

A Dividend of 2% (\$1.00 per share) on the COMMON Stock of this Company for the quarter ending June 30, 1919, will be paid July 31, 1919.

Both Dividends are payable to Stockholders of record as of June 30, 1919.

H. F. BAETZ, Treasurer.

New York, June 16, 1919.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem compatible. Aside from government bonds, the return under which is small, there is nothing more certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain life time is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.00 absolutely beyond question of doubt. The Annuity Department METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

Is a Crime" in The Independent for April 6, is the reader permitted to know certain concurrent facts, which I am sure a fair minded journal would wish its readers to possess. They are these:

Lieutenant Hume, otherwise an excellent officer, was becoming a drunkard. His commanding officer first admonished him, then gave him summary punishment, then had him tried by a general court-martial. The result of this trial is announced in the facsimile. It was his first trial, and he was given a light punishment in the hope that he might be reclaimed, and become again the useful officer he had been before drinking had impaired his usefulness. The leniency was misplaced, and a little later Lieutenant Hume ceased to be an officer.

Private Bajek was tried for a very trifling offense, and your readers have every right, on reading Mr. Post's articles, to become indignant at the seeming lack of justice in the army, at the leniency of officers toward brother officers, and of their severity toward enlisted men. You printed this, I certainly hope, without appreciating the meaning of the parenthetical line indicated by the arrow: ("Evidence of five previous convictions was considered"). And in failing to note this line and to explain its meaning to your readers, you, because you did not know its meaning, and Mr. Post, because if he had explained its meaning he would find the parallel he wished to draw no longer a parallel, have done about all you can, in one article in your journal, in an indirect way to break down discipline in the army.

The court-martial did not punish Private Jabek for being absent without leave for thirty-two hours; he was punished because he was an incorrigible, who had been tried and convicted five times for other offenses during the preceding twelve months. If he had had less than five previous convictions during that time, the limit of punishment any court-martial could have given him would have been the forfeiture of ten days' pay, or confinement in the guard house for fifteen days.

Military courts are now on trial before the public. The court-martial has been abused, and grossly abused by indolent officers who invoke it as an easy means of enforcing discipline. But the system is not what is wrong; it is its abuse. I have been in the army for thirty-three years. I know what difficulties surround the maintaining of order and efficiency in our troops in time of peace, and how much easier these things are in preparation for war. It is one thing to command and train men who, with a high incentive, are looking forward to a great adventure, and another to keep men in hand, at unpleasant stations, month after month, with nothing to look forward to but other and more monotonous days to come. I know just how easy it is, when a soldier has tried his officer's patience by repeated breaches of discipline, to order him before a court. But the courts are not at fault, nor the system, nor the poor soldier who is punished. The fault lies deeper than that, and that is another story.

This I will assert, and I defy Mr. Post or General Ansell, or any other man who seeks to complicate the procedure of military courts by civil methods, to deny its soundness: If I were charged with a crime, and were innocent, I would rather be tried by a court-martial composed of officers of

the United States Army than by any other court in the world, and I would not need counsel to defend me. If I were guilty, I would rather any other court tried me, and I would get the best lawyers to defend me that I could afford to employ. Lawyers are not needed to free the innocent; they are to convict or free those accused of crime, irrespective of their guilt or innocence, depending on which side pays them their retainer.

Courts-martial are to determine guilt or innocence, by direct means, without subterfuge, unembarrassed by legal technicalities that have no bearing on the facts at issue. It is for this reason, more than any other, that civil lawyers find fault with military courts; their abilities to obscure the issue do not function there, and they resent it.

F. C. MARSHALL,  
Brigadier General, A. E. F.

\*\*\*

I am so pleased with Mr. Barton's article, "Satisfying Old Sam Adams," in the issue of March 29, that I am writing to suggest that, if at all possible, you publish it in pamphlet and scatter hundreds of thousands of them all over our land. It would do more to silence enemies of the League of Nations than anything that I have seen. It would make good reading for the constituents of such men as Borah, Reed, Poindexter, Sherman, etc. I would like a lot to send to some of my friends.

GEORGE MICHAEL

Walker, Minnesota

We have received many requests for this article which we were unable to satisfy, for the issue was soon exhausted. Somebody ought to republish it in pamphlet form—or get it read into the Congressional Record. It shows that the opposition to the adoption of the Constitution of the United States was of the same captious and futile character as that now met by the covenant of the League of Nations.

\*\*\*

In reading the article "Putting the Y in Italy" I was struck by two statements: first, that an Italian soldier receives but two cents a day for pay, and second, that after the Y took hold of the buffet they sold these same men many hundreds of gallons of soup at the "absurdly low price" of six and a half cents a bowl.

Are we to infer that the Italian is a frugal man to have in his possession that amount on such pay, or that he is an extravagant fellow to spend three and a half days' wages on a bowl of soup?

GEORGE M. HAGADORN

Anacortes, Washington

The Italian is probably as frugal a man as is to be found in the world. It is no wonder that such a statement is surprising to Americans to whom frugality is a virtue, to be admired perhaps, but always at a safe distance.

Little Dorothy—Daddy, what did you say to mother when you made up your mind you wanted to marry her?

Mr. Meek—I said, "Yes, dear."—*Pelican.*

"What's the difference between amonia and pneumonia?"

"One comes in bottles, the other in chests."—*Yale Record.*
